

**Silicon Institute of Technology**  
| An Autonomous Institute |

# **Curriculum Structure and Detailed Syllabus**

**Master in Computer Application**  
(Two-Year Post-Graduate Program)

**Department of Computer Application**  
**Silicon Institute of Technology**  
**Silicon Hills, Patia, Bhubaneswar - 751024**

*Effective from Academic Year 2020-21*  
Build: 1.20 (18-10-2021)

## Approval History

<b>ACM#</b>	<b>Date</b>	<b>Resolutions</b>
AC-4	18/08/2020	The curriculum structure and detailed syllabus of 1st Year as proposed by the Boards of Studies is approved by the Academic Council.
AC-6	09/10/2021	The curriculum structure and detailed syllabus of 2nd Year as proposed by the Boards of Studies is approved by the Academic Council.

## **Program Outcomes**

Graduates Attributes (GAs) form a set of individually assessable outcomes that are the components indicative of the graduate's potential to acquire competence to practice at the appropriate level. The National Board of Accreditation (NBA) has defined Program Outcomes (POs) for UG Engineering programmes, but not for the MCA programme. Silicon Institute of Technology has defined POs for MCA programme in line with NBA, so that the outcomes can be assessed in a similar manner to UG programmes. The Program Outcomes for MCA programme are given below:

- PO1. Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
- PO2. Design and develop applications to analyze and solve all computer science related problems.
- PO3. Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
- PO4. Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
- PO5. Integrate and apply efficiently the contemporary IT tools to all computer applications.
- PO6. Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
- PO7. Function effectively both as a team leader and team member on multi disciplinary projects to demonstrate computing and management skills.
- PO8. Communicate effectively and present technical information in oral and written reports.
- PO9. Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.
- PO10. Appreciate the importance of goal setting and to recognize the need for life-long learning.

## Program Educational Objectives (PEOs)

- PEO1. Develop software solutions to problems across a broad range of application domains through analysis and design.
- PEO2. Work professionally and communicate effectively in interdisciplinary environment, either independently or in team, and demonstrate leadership in academia and industry.
- PEO3. Utilize computational techniques and develop software by integrating existing technologies and adapt to new technologies for building rich software applications for benefit of the society.

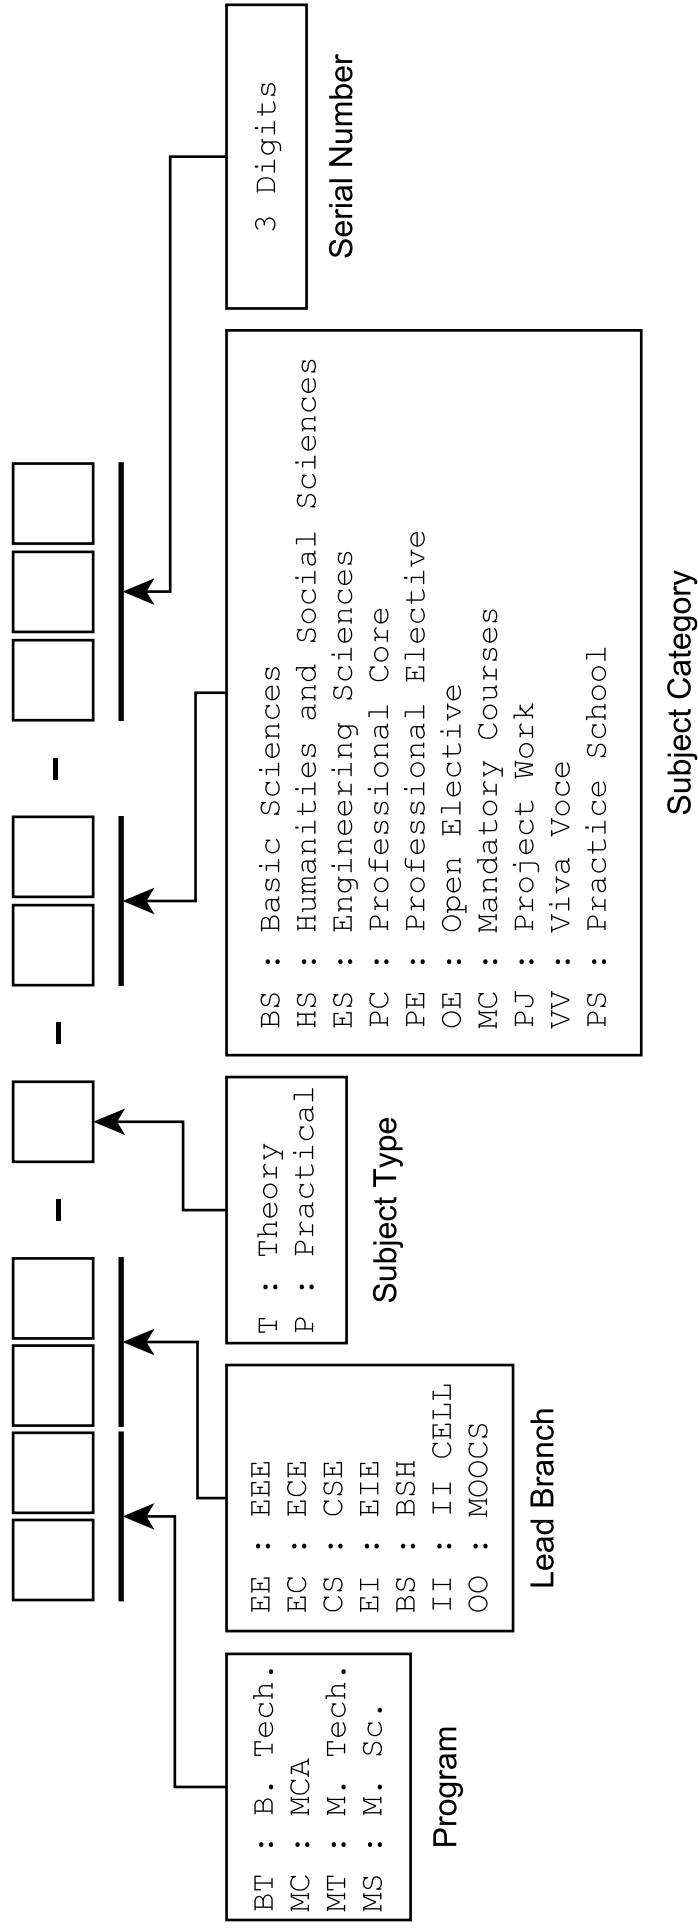

## Program Specific Outcomes (PSOs)

- PSO1. Understand the concepts and applications in various fields of Computer Application like Web designing and development, Mobile application development, and Network & communication technologies.
- PSO2. Apply standard practices and strategies in software development & project development using open-ended programming environments to deliver quality applications for business success.
- PSO3. Employ modern computer languages, technologies, environments, and platforms in creating innovative career paths to be an entrepreneur, and a zest for higher studies.

## Course Types & Definitions

L	Lecture
T	Tutorial
P	Practical / Sessional
WCH	Weekly Contact Hours
BS	Basic Sciences
HS	Humanities & Social Sciences (including Management)
ES	Engineering Sciences
PC	Professional Core
PE	Professional Elective
OE	Open Elective
MC	Mandatory Course
CC	Compulsory Course
AC	Audit Course
PJ	Project Work
VV	Viva Voce

Type	Code	Discrete Mathematics	L-T-P	Credits	Marks
BS	MCBS-T-BS-001		3-1-0	4	100

<b>Objectives</b>	The objective of this course is to familiarize the students with mathematical logic, counting techniques and abstract structures like groups, Boolean algebra and graphs.
<b>Pre-Requisites</b>	Basic knowledge of sets and matrices is required.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Propositional Calculus and Predicate Calculus, Rules of inference.	<b>8 Hours</b>
<b>Module-2</b>	Proofs and proof strategies, Summation of sequences, Mathematical induction.	<b>8 Hours</b>
<b>Module-3</b>	Basics of counting techniques, Recurrence relation and its solutions, Principle of inclusion and exclusion and its applications.	<b>10 Hours</b>
<b>Module-4</b>	Set Theory, Relation, Equivalence relation and Partial Order relation, Hasse-Diagram.	<b>10 Hours</b>
<b>Module-5</b>	Graphs, paths and connectivity in a graph, planar graph, Trees.	<b>10 Hours</b>
<b>Module-6</b>	Binary operation, semigroup, monoid, group and ring, group codes.	<b>10 Hours</b>
<b>Total</b>		<b>56 Hours</b>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Define & describe various logical connectives and expressions along with rules of inferences.
CO2	Apply various methods of proofs and proof strategies.
CO3	Construct various counting techniques using recurrence relations, generating functions for future applications.
CO4	Interpret the knowledge on sets, relations and functions.
CO5	Develop the concepts and applications of graphs.
CO6	Identify & define algebraic structures like group, ring, Boolean algebra and its applications.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3
CO1	3	3	2	3	1						3	1	1
CO2	3	3	2	3	1						2	1	1
CO3	3	3	2	2	2						3	1	1
CO4	3	2	2	2	2						2	1	1
CO5	3	2	3	2	2						3	1	1
CO6	3	3	2	3	1						2	1	1

Type	Code	Financial Accounting	L-T-P	Credits	Marks
HS	MCBS-T-HS-002		3-0-0	3	100

<b>Objectives</b>	To provide basic knowledge of financial accounting and equip the students with the knowledge of accounting process and preparation of final accounts.
<b>Pre-Requisites</b>	Basic knowledge of day to day transactions of any business organization.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with problem solving activities.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Fundamentals of Accounting: Accounting as a business function and language of business, Functions and objectives of Accounting, Users of Accounting information, Limitations of Accounting, Cyclical nature of business and Accounting cycles, Accounting concepts – as applicable to Balance sheet and Income Statements, The rule of debit and credit.	<b>7 Hours</b>
<b>Module-2</b>	Accounting equations, Accounting events and transactions, Classification of transaction and their effect on Accounting Equation, Statement showing the effect of transaction on assets, liabilities and capital, Capital and revenue transactions, Fixed assets and depreciation policy and methods.	<b>8 Hours</b>
<b>Module-3</b>	Recording of transaction: The journal, The ledger postings, Subsidiary Books of Accounts: purchase books, sales books, Cash books.	<b>7 Hours</b>
<b>Module-4</b>	Preparation of Financial Statements of a sole trader: Trial balance, Trading Account, Manufacturing Account, Profit and Loss account, Balance sheet with basic adjustments.	<b>10 Hours</b>
<b>Module-5</b>	Company Accounts: Types of Companies - Private sector, Public sector, Private limited, public limited, Govt. company, holding company and subsidiary company, Capital and types of capital - Authorized Share Capital, Subscribed, issued, paid up share capital, Shares - Equity Shares, Preference shares and types of preference shares, Issue of share capital and treatment of books of Accounts, Journal entries for issue only (forfeiture of shares excluded).	<b>10 Hours</b>
<b>Total</b>		<b>42 Hours</b>

5. <https://syskool.com/a-company-definition-features/>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Understand the concept of accounting and its application in engineering.
CO2	Develop the ability to find out the effects of a transaction on assets, liabilities and capital.
CO3	Apply the rules and regulation of financial accounting to record the day to day transactions and events to keep records.
CO4	Evaluate the profit and loss of the organization.
CO5	Introducing to the corporate world, Learn about Companies, Shares and position of the company in the corporate world.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO7	Function effectively both as a team leader and team member on multi disciplinary projects to demonstrate computing and management skills.
PO8	Communicate effectively and present technical information in oral and written reports.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

CO5			1	1			1						2

Type	Code	Problem Solving & Programming Using C	L-T-P	Credits	Marks
PC	MCCS-T-PC-001		3-0-0	3	100

<b>Objectives</b>	The course aims to provide exposure to problem-solving through programming and train the students on the basic concepts of the C-programming language.
<b>Pre-Requisites</b>	Basic analytical and logical understanding including basic knowledge and usage of computers is required for this course. Prior experience with any other programming language will be beneficial.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Introduction to computers, basic organization of a computer, number system and conversion, algorithm, flowchart, structure of C program, character set, identifier, keywords, constants, variables, data types, expression, statements, operators, operator precedence and associativity, type conversion; Decision making and branching: if, if-else, nested if-else, else-if ladder, switch statement; Loop constructs: while, for, do-while, nested loops, jump statements (break, continue, goto), exit statement.	<b>10 Hours</b>
<b>Module-2</b>	Functions: monolithic vs modular programming, user defined function vs library function, introduction to function, function prototype, function definition, function call, parameter passing, recursion, storage classes (auto, register, static, extern); Arrays: declaration and initialization of arrays, accessing array elements, basic operation on arrays, multidimensional array, array and function.	<b>7 Hours</b>
<b>Module-3</b>	String: declaration and initialization, manipulation, string handling functions: strlen, strcpy, strcat, strcmp; Pointers: concepts of pointer, declaration and initialization of pointer variable, accessing variable through pointer, pointer arithmetic, pointer expression, chain of pointers, using pointer with arrays and string, array of pointers, pointer to an array, pointer as function argument, function returning pointer, pointer to function.	<b>7 Hours</b>
<b>Module-4</b>	Structures: declaration and definition, initialization, accessing members of structure, copying and comparing structure variables, nested structures, array of structure, structure and function, pointer to structure, self-referential structure, union; Dynamic Memory Management using the malloc, calloc, realloc and free functions.	<b>8 Hours</b>
<b>Module-5</b>	File Handling: concept of files, text vs binary file, data file manipulation, file opening and closing, standard and formatted input/output operation on files, random access on files using functions ftell, fseek, and rewind; Command-line arguments, typedef, bit-field, enumerated data type, pre-processor directives, macros, file inclusion.	<b>10 Hours</b>
<b>Total</b>		<b>42 Hours</b>

5. <https://www.javatpoint.com/c-programming-language-tutorial>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Develop simple C programs using data types, variables, operators and control transfer statements.
CO2	Design C programs to handle similar data items using arrays and construct modular programs.
CO3	Use string and pointer to design efficient C programs for manipulating real life situations.
CO4	Manipulate memory during run time and handle heterogeneous data items using structure and union.
CO5	Design C programs to create and manipulate files. Write efficient C programs using command line arguments, macros and pre-processor directives.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Basic structure of Computer: Functional Units & Operation concepts, Bus Structures, Performance, Multiprocessors and Multi computers, Memory Location and Address, Memory Operations, Register Transfer Notation, Assembly Language Notation, Basic Instruction Types, Addressing Modes, Basic I/O Operation, Subroutines.	<b>9 Hours</b>
<b>Module-2</b>	Binary Arithmetic: Addition and Subtraction of Signed Numbers, Design of Fast Adders, Multiplication of positive numbers, Signed Operand Multiplication, Fast multiplication, Integers Division, Floating-Point numbers representation, Floating – Point numbers operations.	<b>8 Hours</b>
<b>Module-3</b>	Memory System: Basic Concepts, Semiconductor RAM memories, ROM, Speed size and cost, Cache Memory concepts, Cache Memory mapping techniques, Performance consideration, Virtual Memory concepts, Translation Look-aside Buffer, Replacement techniques, Secondary Storage.	<b>9 Hours</b>
<b>Module-4</b>	Basic Processing Unit: Fundamental Concepts, Execution of Complete Instruction, Multi-bus Organization, Hardwired control, Micro-programmed control. I/O Interface, Isolated vs Memory Mapped I/O, Mode of transfer: Programmed I/O, interrupt I/O, DMA.	<b>8 Hours</b>
<b>Module-5</b>	Pipelining: Basic Concepts, Parallel Processing, Pipeline Hazards, Data Hazard, Structural Hazard, Control Hazard, Super Scalar Operation, Case Study: Ultra Sparc II.	<b>8 Hours</b>
<b>Total</b>		<b>42 Hours</b>

#### Text Books:

- T1. C. Hamacher, Z. Vranesic, and S. Zaky, *Computer Organization*, 5<sup>th</sup> Edition, TMH, 2011.
- T2. M. M. Mano, *Computer System Architecture*, 3<sup>rd</sup> Edition, PHI, 2003.

#### Reference Books:

- R2. N. Carter, *Schaum's Outline of Computer Architecture*, TMH, 2002.

#### Online Resources:

1. <https://nptel.ac.in/courses/106/103/106103068/>
2. <https://nptel.ac.in/courses/106/106/106106166/>
3. <https://nptel.ac.in/courses/106/105/106105163/>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Identify and describe the functionality of various functional units of digital computer. Compare different addressing modes, instruction formats and their implementation in programming.
CO2	Perform various binary arithmetic operations using different techniques. Represent floating point numbers and perform various operations on them.
CO3	Describe the working principle of Main Memory, Cache Memory and Virtual Memory organization and solve numerical problems based on memory management.
CO4	Identify the components of single & multi bus organization and describe execution of complete instruction. Compare different modes of data transfer techniques.
CO5	Describe the working principle of pipeline and identify various pipeline hazards. Explain the principle behind super scalar operation.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

CO3	3	3	3	2	2					1	2	1	2
CO4	2	2	2	1	1					1	3	2	3
CO5	3	3	3	3	1					1	1		1

Type	Code	Language & Communication Skills	L-T-P	Credits	Marks
HS	MCBS-T-HS-003		3-0-0	3	100

<b>Objectives</b>	To develop the students' communication proficiency with an emphasis on Language Skills, make them aware of the importance of cross-cultural communication, help them read and comprehend texts of different genres, and compose effective business messages with the correct use of English Grammar.
<b>Pre-Requisites</b>	Basic knowledge of English grammar and the ability to read and write using the English language.
<b>Teaching Scheme</b>	Regular classroom lectures with use of PPTs as and when required; sessions are planned to be interactive with a focus on improving spoken and written communication skills in English.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours			
<b>Module-1</b>	Communication Process and Types; Process and factors involved: code, channel, message, context, feedback; Importance of communication; differences between General and Technical communication; Communication across cultures; Barriers to effective communication; Verbal and Non-verbal communication.	<b>7 Hours</b>			
<b>Module-2</b>	Language Skills and Usage: Four skills of language (L, S, R, W); Importance of a common language; Importance of communication through English; Language functions (Speech Acts); Art of Public Speaking: Styles and techniques (assertiveness, convincing, argumentation, negotiation); Presentation skills: The four Ps' (Plan, Prepare, Practice, Present), Content development, Clarity of speech, Non-verbal gestures.	<b>9 Hours</b>			
<b>Module-3</b>	Sounds of English: An introduction to English phonology; Consonants; Vowels and Diphthongs; Consonant clusters and Problem sounds; Phonemic Transcriptions; Syllabic Division; Stress; Intonation.	<b>6 Hours</b>			
<b>Module-4</b>	Reading Skills: Importance of reading; Sub Skills of Reading; Reading Comprehension; Techniques of Summarizing and Note making; Introduction to genres of short stories; Short Stories 1 – 4; Critical analysis of the prescribed texts.	<b>11 Hours</b>			
<b>Module-5</b>	Effective Formal Writing Skills: Difference between Speech and Writing; Elements of effective Business Writing; Basic understanding of the English Verb system; Identifying the common errors; Process Writing; Writing a paragraph; Writing an essay: descriptive, informative; Letter writing: formal and informal; Memo and email; Report Writing.	<b>9 Hours</b>			
<b>Total</b>					<b>42 Hours</b>

4. <https://www.coursera.org/specializations/business-english>
5. <http://www.academiccourses.com/Courses/English/Business-English>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Understand the process and types of communication, and the nuances of communication across cultures.
CO2	Understand and apply the skills of language in day-to-day communication as well as in public speaking.
CO3	Understand the sounds of the English language and be able to check their pronunciation through phonemic transcriptions in order to speak with a neutral accent.
CO4	Enhance their reading skills and be able to critically analyse texts of various kinds.
CO5	Compose different types of business correspondences effectively with a proper use of grammar.

#### Program Outcomes Relevant to the Course:

PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO7	Function effectively both as a team leader and team member on multi disciplinary projects to demonstrate computing and management skills.
PO8	Communicate effectively and present technical information in oral and written reports.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

#### Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3
CO1						2		3		2	1	1	3
CO2						1	1	3		2		1	1
CO3						1	1	3		2			3
CO4						1	1	3		2	2	2	2
CO5						2	2	3		2	1	1	3

Type	Code	C Programming Lab	L-T-P	Credits	Marks
PC	MCCS-P-PC-003		0-0-4	2	100

<b>Objectives</b>	Formulate problems and implement algorithms using C programming language. The students will be able to enhance their analyzing and problem solving skills and use the same for writing programs in C.
<b>Pre-Requisites</b>	Basic knowledge of computers and knowledge of C programming language.
<b>Teaching Scheme</b>	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to Linux operating system and simple Linux commands.
2	Working with the vi Editor.
3	Compilation and execution of simple C programs.
4	Programs using arithmetic operators.
5	Programs using relational and logical operators.
6	Formulate problems on Decision making statements using if-else.
7	Formulate problems on Decision making statements using nested if-else.
8	Implement decision making statements using switch-case.
9, 10	Implement loop-control structures using while construct.
11	Implement loop-control structures using do-while construct.
12, 13	Programs on loop-control structures using for loops.
14	Programs on loop-control structures using nested loops.
15	Programs on control transfer statement using break, continue, goto.
16	Develop Programs for 1-Dimensional array operations.
17	Develop programs for 2-Dimensional array operations.
18	Programs on using pointers with variables of different data-types.
19	Operations on Array using Pointer.
20	Programs on functions using call by value.
21	Programs on functions using call by reference.
22,23	Develop programs on functions using recursion.
24	Develop programs on storage classes.
25	Programs on creating and using strings.
26	Programs on string manipulation functions in C.
27	Programs on string manipulation using pointers.
28, 29	Programs on creating and using simple structures.

Cont'd...

Experiment-#	Assignment/Experiment
30	Programs on array of structures.
31	Programs on nested structures.
32	Programs on use of pointers to structures.
33	Passing Array and structure to user defined functions.
34	Programs on creating and using unions.
35	Formulate problems on dynamic memory management using malloc() and calloc().
36	Formulate problems on dynamic memory management using realloc() and free().
37	Programs on passing parameters through command-line arguments.
38	Programs on pre-processor directives.
39	Programs on use of enumeration.
40	Programs for opening of files in different modes and closing of file.
41	Programs on read and write operations on text file.
42	Programs on random access operations on text file.

5. <https://www.javatpoint.com/c-programming-language-tutorial>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Construct C programs for mathematical operations using control statements.
CO2	Develop C programs for Array and String manipulation.
CO3	Construct modular programs for better maintenance and reusability.
CO4	Manipulate heterogeneous data using structure & union and apply dynamic memory management techniques to solve different problems.
CO5	Create and manipulate files using C programs and develop the programs using command line arguments.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.

*Cont'd...*

PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

CO3	3	2	2		2					2	3	1	2
CO4	2	2	2		3					2	2	1	1
CO5	2	2	3		2					2	2	1	2

Type	Code	Language & Communication Skills Lab	L-T-P	Credits	Marks
HS	MCBS-P-HS-004		0-0-2	1	100

<b>Objectives</b>	This laboratory course is designed to make students effective communicators, by addressing issues like speaking inhibitions. This is accomplished by individual and team activities based on the four skills of language (LSRW).
<b>Pre-Requisites</b>	Basic knowledge of English grammar and the ability to speak, read and write using the English language is required.
<b>Teaching Scheme</b>	Various tasks designed to facilitate communication through pair work, group/team work, individual and group presentations, discussions, role plays, listening to audios, watching videos, business writing and vocabulary enhancement.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	JAM: Just-A-Minute sessions to develop fluency in speaking using various topics of discussion.
2	Chart-work or Poster presentation on the Process of Communication.
3	Non-verbal Communication: Conducting role plays to understand the practical applications of non-verbal cues and body language.
4	Cross-cultural Communication: dealing with the nuances of this communication type through case studies, videos and discussions.
5	Listening Comprehension: Listening for specific information, ear training and for pronunciation practices.
6	Sounds of English: practice sessions on vowels, consonants and diphthongs; problem sounds and consonant clusters.
7	Transcriptions: the use of IPA symbols for transcribing words.
8	Stress and Syllable Division: Word stress, sentence stress, contrastive stress, rules of stress & syllable division through practice sessions and use of dictionaries.
9	Sentence Rhythm: through recitation of poems, read-aloud sessions and pronunciation practices.
10	Oral presentation-I: Power-point presentations on selected technical or non-technical topics of relevance.
11	Oral presentation-II: Power-point presentations on selected technical or non-technical topics of relevance.
12	Reading Comprehension: reading of various business & non-technical passages of relevance.
13	Writing Practice-I: memo and letters
14	Writing Practice-II: report writing

**Online Resources:**

1. <https://nptel.ac.in/courses/109104031/>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Develop listening comprehension and overcome their inhibitions to speak in public.
CO2	Communicate properly as an engineer in cross-cultural contexts.
CO3	Develop their English pronunciation skills through practice.
CO4	Work effectively as a team member or as a leader of the team.
CO5	Develop writing skills for effective communication in corporate environment.

**Program Outcomes Relevant to the Course:**

PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO7	Function effectively both as a team leader and team member on multi disciplinary projects to demonstrate computing and management skills.
PO8	Communicate effectively and present technical information in oral and written reports.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

CO4						1	3	3		2	1	1	3
CO5						1	2	3		2	2	2	3

Type	Code	Yoga	L-T-P	Credits	Marks
MC	MCBS-P-MC-005		0-0-2	0	100

<b>Objectives</b>	To impart skills in students for control of mind, body and soul, enhance self-awareness, focus, and concentration, bring together physical and mental wellness, manage stress and anxiety, achieve perfect equilibrium and harmony of body & mind, and promote self-healing.
<b>Pre-Requisites</b>	There are no pre-requisites for this course.
<b>Teaching Scheme</b>	Regular practice classes conducted under supervision of the qualified Yoga teacher with necessary explanation and demonstration for each session.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction; introduction of Yoga
2	<i>Pranayama</i> ; performing breathing exercise
3	<i>Mudra</i> ; learning various types of <i>Mudras</i> and their benefits
4	<i>Bandha</i> ; learning various types of <i>Bandhas</i> and their benefits
5	<i>Chakra</i> ; learning various types of <i>Chakras</i> and their benefits
6	<i>Chakshu Visrant Asana Samuha</i> ; eye movement and exercises
7	Twisting set; standing twisting asana
8	Side stretching set; standing Side stretching <i>asana</i>
9	Forward bending set; standing Forward bending <i>asana</i>
10	Backward bending set; standing Backward bending <i>asana</i>
11	Balancing set; learning <i>Vrikshasana</i> , <i>Ekpada Pranamasana</i> and benefits
12	<i>Surya Namaskar</i> ; surya namaskar mantra and poses
13	<i>Vajrasana</i> set; sitting <i>asana</i> sets
14	<i>Padmasana</i> set; sitting <i>asana</i> sets
15	Sleeping asana and <i>Yoga Nidra</i> ; relaxation postures

#### Reference Books:

R1. Swami Satyananda Saraswati, *Asana Pranayama Mudra Bandha*, 4<sup>th</sup> Edition, Yoga Publication Trust, Munger (Bihar), India, 2008.

**Online Resources:** There are a number of online resources available for this subject. The student is advised to search on the Internet and locate the required study materials as per advise of the teacher.

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Promote positive health, get relief from stress and obtain balance of body & mind.
CO2	Acquire knowledge of integral approach of Yoga Therapy to common ailments.
CO3	Develop skills to adopt Yoga practices for health and general well-being.
CO4	Develop overall personality through control of body, mind and soul.
CO5	Enhance scientific attitude and team spirit for creative and constructive endeavors.

**Program Outcomes Relevant to the Course:**

PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3

CO4									3	3		1	2
CO5						2			2	3	1	1	2

Type	Code	Probability & Statistics	L-T-P	Credits	Marks
BS	MCBS-T-BS-006		3-0-0	3	100

<b>Objectives</b>	The objective of this course is to learn the basic concepts of probability and statistics including various methods of estimations & statistical testing useful for analysis of data.
<b>Pre-Requisites</b>	Basic knowledge of sets, coordinate geometry, and calculus is required.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as and when required; sessions are planned to be interactive with focus on problem solving activities.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Probability, Random variables and Probability Distributions: Probability, Conditional Probability, Bayes' Rule, Concept of a random variable, Discrete and Continuous probability distribution functions, Mean, Variance and Co-Variance of random variables.	<b>9 Hours</b>
<b>Module-2</b>	Discrete & Continuous Probability Distributions: Binomial distribution, Poisson distribution, Hypergeometric distribution, Normal distribution, Uniform distribution, Joint distribution.	<b>9 Hours</b>
<b>Module-3</b>	Fundamental Sampling Distributions and Data Description: Random sampling, Single sample – estimation of mean and variance, Two samples – estimating the difference between two means and ratio of two variances, Maximum likelihood estimation, Confidence interval.	<b>8 Hours</b>
<b>Module-4</b>	Hypothesis Testing: One and two tailed test, Single sample – test concerning single mean, two means, test of single and two proportions, Goodness of fit test.	<b>8 Hours</b>
<b>Module-5</b>	Simple Linear Regression and Correlation: Least square method, Correlation, Multiple linear regression, Analysis of variance.	<b>8 Hours</b>
<b>Total</b>		<b>42 Hours</b>

4. <https://stattrek.com/>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Solve problems on probability of discrete nature.
CO2	Solve problems on probability of continuous nature.
CO3	Infer on mean and variance of a data set.
CO4	Categorize the distribution type of a data set.
CO5	Fit a curve using regression model.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3

Type	Code	Data Structures	L-T-P	Credits	Marks
PC	MCCS-T-PC-004		3-1-0	4	100

<b>Objectives</b>	To understand the abstract data types, solve problems using data structures such as linear lists, stacks, queues, hash tables, binary trees, heaps, binary search trees and graphs.
<b>Pre-Requisites</b>	Knowledge of programming using C language is essential.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with programming and problem solving activities.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Introduction to data structures, classification of data structures, algorithms, time and space analysis of algorithms, asymptotic notation, abstract data types, Arrays - introduction, basic operations, row and column major representation, sparse matrix. Linked list- single linked list, double linked list, circular linked list.	<b>12 Hours</b>
<b>Module-2</b>	Representation of polynomial and its operations. Stack- representation using array and linked list, basic operations, applications - recursion, polish notation (conversion of infix to post fix expression and evaluation of postfix expression). Queue- representation using array and linked list, basic operations, circular queue.	<b>10 Hours</b>
<b>Module-3</b>	Tree - terminology, representation, binary tree - tree traversal algorithms with and without recursion. Binary search tree, Height balanced tree (AVL tree), m-way search trees, B-trees, applications of tree. Graph- terminology, representation, path matrix, graph traversal (BFS, DFS), all pair shortest path, topological sort.	<b>12 Hours</b>
<b>Module-4</b>	Searching and sorting techniques: linear and binary search, bubble sort, insertion sort, selection sort, quick sort, merge sort, radix sort.	<b>10 Hours</b>
<b>Module-5</b>	Introduction to heap, priority queue, applications of priority queue. Hashing- hash functions and hashing techniques. collision resolution techniques - linear probing, quadratic probing, chaining.	<b>12 Hours</b>
<b>Total</b>		<b>56 Hours</b>

4. <https://www.coursera.org/learn/data-structures>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Compare different programming methodologies and define asymptotic notations to analyze performance of algorithms and get acquainted with array and linked list.
CO2	Extrapolate the concepts of polynomial and use appropriate data structures like arrays, linked list, stacks and queues to solve real world problems efficiently.
CO3	Represent and manipulate data using nonlinear data structures like trees and graphs to design algorithms for various applications.
CO4	Apply the knowledge of different searching and sorting techniques to real-life problems.
CO5	Appreciate different memory management techniques, their significance and illustrate various hashing methods.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Object oriented concepts: Object oriented systems development life cycle, Unified Modeling Language, UML class diagram, Use-case diagram; Java Overview: Java Virtual Machine, Java buzz words, Data types, Operators, Control statements, Class fundamentals, Objects, Methods, Constructors, Overloading, Access modifiers.	<b>9 Hours</b>
<b>Module-2</b>	Inheritance: Basics of Inheritance, using super and final keyword, method overriding, Abstract classes, defining and importing packages, access protection, interfaces; Exception handling: Exception fundamentals, types, understanding different keywords (try, catch, finally, throw, throws), User defined exception handling.	<b>8 Hours</b>
<b>Module-3</b>	Input/Output: Files, stream classes, reading console input; Threads: thread model, use of Thread class and Runnable interface, thread synchronization, multithreading, inter thread communication.	<b>8 Hours</b>
<b>Module-4</b>	String manipulation: Basics of String handling, String class, StringBuilder, StringBuffer, StringTokenizer. Applet basics and life cycle; Event Handling: delegation event model, event classes, sources, listeners, Adapter class.	<b>8 Hours</b>
<b>Module-5</b>	Introduction to GUI Programming: working with windows, frames, graphics, color, and font. AWT Control fundamentals. Swing overview; JavaFX overview; Java database connectivity: JDBC overview, creating and executing queries, dynamic queries.	<b>9 Hours</b>
<b>Total</b>		<b>42 Hours</b>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Apply object oriented principles in software design process to develop Java programs for real life applications.
CO2	Employ inheritance and exception handling techniques for developing robust and reusable software.
CO3	Develop programs using stream classes for various I/O operations and design concurrent programs using threads to maximize the use of processing power.
CO4	Design applications for text processing using String class and develop user interactive applications using event handling.
CO5	Design database driven GUI applications using AWT, Swing and JDBC.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3

Type	Code	Operating Systems	L-T-P	Credits	Marks
PC	MCCS-T-PC-006		3-0-0	3	100

<b>Objectives</b>	The objective of this course is to introduce the fundamentals of operating systems, services, processes, process scheduling and synchronization, principles of primary, secondary and virtual memory management, and basics of structure & organization of file system & disk scheduling methods.
<b>Pre-Requisites</b>	Fundamentals of computer, data structures, programming knowledge in C or C++ is required.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as and when required; sessions are planned to be interactive with focus on problem solving activities.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	<b>Introduction:</b> concept of operating system, origin and evolution, types, resources managed, services provided, system calls and their types, system structure of operating system.	<b>6 Hours</b>
<b>Module-2</b>	<b>Process Management:</b> process concepts, states, PCB, types of schedulers, operations on process, inter-process communication, concept of buffering, thread overview, user & kernel threads, multi-threading models, issues with multi-threading; <b>CPU Scheduling:</b> scheduling criteria, scheduling algorithms: FCFS, SJF, SRTF, RR, Priority Scheduling, MLQ, MLQ with Feedback Scheduling.	<b>10 Hours</b>
<b>Module-3</b>	<b>Inter-Process Synchronization:</b> Bounded-buffer problem, shared-memory solution to producer-consumer problem; Critical section problem: Peterson's solution, synchronization hardware, Semaphores; Classical problems of synchronization: Bounded-Buffer problem, Readers-Writers Problem, Dining-Philosophers Problem, Sleeping Barber problem, monitors, Deadlock: characterization, prevention, avoidance, Banker's algorithm, deadlock detection and recovery.	<b>10 Hours</b>
<b>Module-4</b>	<b>Memory Management:</b> Logical and physical address space, dynamic loading and linking, swapping, contiguous memory allocation, dynamic storage allocation problem, overlays, paging and segmentation; <b>Virtual Memory Management:</b> Demand paging, page fault, basic page replacement policy, Page Replacement Algorithms: FIFO, OPT, LRU, LRU-Approximation, LFU, MFU, Thrashing, working-set model.	<b>9 Hours</b>
<b>Module-5</b>	<b>Secondary Storage Structure:</b> Overview of mass storage structure, disk structure; <b>Disk Scheduling:</b> FCFS, SSTF, SCAN, C-SCAN, LOOK, C-LOOK, RAID structure; <b>File System:</b> access methods, directory structure, access control list, I/O System: polling, interrupts, DMA, Case studies: The LINUX System.	<b>7 Hours</b>
<b>Total</b>		<b>42 Hours</b>

**Text Books:**

4. <https://www.cl.cam.ac.uk/teaching/1011/OpSystems/os1a-slides.pdf>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explore principles behind various types of operating systems, system components, system calls, protection mechanisms and services.
CO2	Understand the benefits of thread over process, importance of inter-process communication, analyze various CPU scheduling algorithms and design new scheduling algorithms.
CO3	Understand the significance of process synchronization and get acquainted with various deadlock handling mechanisms.
CO4	Describe the working principle of main memory, cache memory & virtual memory, and solve memory allocation related problems.
CO5	Acquire knowledge on secondary storage management, performance of disk scheduling algorithms, identify issues in file structures, and protection & security mechanisms.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.

CO4	3	3	3	2	1	1					3	1	1
CO5	2	2	3	2	1	1					3	1	1

Type	Code	Computer Networks	L-T-P	Credits	Marks
PC	MCCS-T-PC-007		3-0-0	3	100

<b>Objectives</b>	The objective of this course are to develop an understanding of modern network architectures from a design and performance perspective, introduce the major concepts involved in WANs, LANs, and WLANs, and provide fundamental knowledge on network programming & WLAN measurement.
<b>Pre-Requisites</b>	Basic knowledge of Computer Organization, Operating Systems, and programming using C language is required.
<b>Teaching Scheme</b>	Regular classroom lectures with use of PPTs as and when required; sessions are planned to be interactive with focus on problem solving and programming.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Data communication Components: Representation of data and its flow Networks , Various Connection Topology, Protocols and Standards, OSI model, Transmission Media, LAN: Wired LAN, Wireless LANs, Connecting LAN and Virtual LAN, Techniques for Bandwidth utilization: Multiplexing - Frequency division, Time division and Wave division, Concepts on spread spectrum.	<b>8 Hours</b>
<b>Module-2</b>	Data Link Layer and Medium Access Sub Layer: Error Detection and Error Correction - Fundamentals, Block coding, Hamming Distance, CRC; Flow Control and Error control protocols - Stop and Wait, Go back – N ARQ, Selective Repeat ARQ, Sliding Window, Piggybacking, Random Access, Multiple Access Protocols. Pure ALOHA, Slotted ALOHA, CSMA, CSMA-CD and CSMA-CA.	<b>10 Hours</b>
<b>Module-3</b>	Network Layer: Switching, Logical addressing – IPV4, IPV6; Error reporting and Management protocols: ICMP, IGMP. Address mapping – ARP, RARP, Bootstrap protocol and DHCP–Delivery, Forwarding and Unicast Routing protocols.	<b>9 Hours</b>
<b>Module-4</b>	Transport Layer: Process to Process Communication, User Datagram Protocol (UDP), Transmission Control Protocol (TCP), SCTP Congestion Control; Quality of Service, QoS improving techniques: Leaky Bucket and Token Bucket algorithm.	<b>9 Hours</b>
<b>Module-5</b>	Application Layer: Domain Name Space (DNS), DDNS, TELNET, EMAIL, File Transfer Protocol (FTP), World Wide Web, HTTP, SNMP. Basic concepts of Bluetooth, Firewalls and Cryptography.	<b>6 Hours</b>
<b>Total</b>		<b>42 Hours</b>

3. <https://www.geeksforgeeks.org/computer-network-tutorials>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Correlate the functionalities of the different layers of OSI and TCP/IP model.
CO2	Design functional blocks of Wide-Area Networks (WANs), Local Area Networks (LANs) & Wireless LANs (WLANs) and define the functions of each block.
CO3	Classify the routing protocols and assign the IP addresses for a given network using static and dynamic addressing techniques.
CO4	Simulate different transport layer protocols using network programming and develop client-server applications.
CO5	Analyze the features and operations of various application layer protocols such as HTTP, FTP, DHCP, RTP, SMTP and others.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

CO3	1	1	1	3					2	1	2	1	3
CO4	1	2	2	2					1	1	3	1	3
CO5	1	2	2	2					2	3	3	1	2

Type	Code	Data Structures Lab	L-T-P	Credits	Marks
PC	MCCS-P-PC-008			0-0-4	2

<b>Objectives</b>	Formulate problems and implement algorithms using the C programming language, to enhance their analysis and problem-solving skills and use the same for developing C programs for the computer.
<b>Pre-Requisites</b>	Basic knowledge of computers and knowledge of C programming language.
<b>Teaching Scheme</b>	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Design, develop and implement insert operation on array
2	Design, develop and implement delete operation on array
3	Develop a program for triplet representation of sparse matrix
4	Develop a program for transpose of sparse matrix
5, 6	Develop programs on structure, pointer and dynamic memory allocation
7, 8	Create a single linked-list and perform different operations on single linked-list
9, 10	Create a double linked-list and perform different operations on double linked-list
11, 12	Create a circular linked-list and perform different operations on circular linked-list
13	Develop a program to implement polynomial addition using linked-list
14, 15	Design, develop and implement stack using array and linked list
16, 17	Write programs to implement different applications of stack
18	Develop program to implement of queue using array
19	Develop program to implement queue using linked list
20	Write a program for implementation of circular queue
21, 22	Write program to implement of BST
23	Design, develop and implement graph traversal algorithms
24	Implementation of linear search and binary search
25	Implementation of bubble and selection sort
26, 27, 28	Implementation of insertion sort, quick sort, and merge sort

4. <https://www.coursera.org/learn/data-structures>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Implement various operations on array and Sparse matrix.
CO2	Design functions to implement basic operations on stack and Queue. Apply the concept of stack and queue for solving real world problems.
CO3	Implement various operations of single, double and circular linked list and apply them in various real life applications.
CO4	Construct binary search tree and perform traversal, insertion, deletion, and search operations on it.
CO5	Compare between BFS and DFS traversal operations in a graph and implement various sorting and searching techniques.

#### Program Outcomes Relevant to the Course:

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

Type	Code	OOP Using Java Lab	L-T-P	Credits	Marks
PC	MCCS-P-PC-009		0-0-2	1	100

<b>Objectives</b>	The objective of the course is to apply object oriented programming principles and implement object oriented programming using JAVA language.
<b>Pre-Requisites</b>	Basic analytical and logical understanding including basic knowledge and usage of computers is required for this course. Prior experience with any other object oriented programming language will be beneficial.
<b>Teaching Scheme</b>	Regular laboratory classes with the use of ICT whenever required, demonstration through practical simulation of code using IDE.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Understanding Java platform, compilation, and execution of a java program.
2	Overview of Eclipse IDE.
3	Use of class, use of control statements, data types, operators.
4	Implement class, object, constructor, methods, and other OOP features.
5	Inheritance Basics, more uses of constructor, method overriding, use of final.
6	Object class, practical use of abstract class.
7	Using Interface for achieving multiple inheritance, implementation of package.
8	Exception handing fundamentals, java built-in exceptions, Use of Scanner class for console input, use of own Exception subclass.
9	Java thread life cycle model and implementation approach, thread priority, implementation of synchronization.
10	I/O Basics, byte stream and character streams, reading and writing files.
11	Applet life cycle implementation, text processing using Java predefined String, StringBuilder and StringBuffer classes.
12	GUI basics and Window fundamentals, working with different Component, Container and Layout Managers.
13	Event handling for interactive GUI application.
14	Java database connectivity using JDBC, steps and use of different drive types.

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to Linux OS and basic VI editor commands.
2	Linux File Structure and advanced Linux commands like grep, pipe, cut etc.
3	Introduction to UNIX Shell Script: Arithmetic Expressions, Relational & Conditional Operators.
4	UNIX Shell Script: Looping, Case structure.
5	Process Creation, process handing, process signaling through fork(), exec().
6	CPU Scheduling (Non-Pre-emptive) FCFS, SJF, Priority.
7	CPU Scheduling (Pre-emptive) SRTF, RR, Priority-based preemptive scheduling
8	Multi-Threaded application using POSIX threads.
9	Synchronization using Semaphore (Producer- Consumer, Reader-Writer).
10	Message passing: Pipe and Signals.
11	Deadlock implementation: Banker's Algorithm.
12	Implementation of different Page Replacement Algorithms.
13,14	Implementation of various Disk scheduling Algorithms.

#### Text Books:

4. <https://www.cl.cam.ac.uk/teaching/1011/OpSystems/os1a-slides.pdf>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Carry out basic and advanced UNIX commands for system administration as well as write shell scripts for real life applications.
CO2	Simulate various CPU scheduling algorithms like FCFS, RR, SJF, Priority and Multilevel Queue etc.
CO3	Implement various program on process creation, inter-process communication and synchronization.
CO4	Execute Banker's algorithm for handling situations of deadlock.
CO5	Implement different page replacement algorithms like FIFO, LRU, LFU and OPTIMAL etc.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.

Type	Code	Personality Development & Soft Skills Lab	L-T-P	Credits	Marks
HS	MCBS-P-HS-007			0-0-2	1

<b>Objectives</b>	The objective of this course is to help students work on their personality development through an understanding of Soft skills, participate in Group Discussions (GD), present their views in public, perform well in Personal Interviews, and become successful in a corporate scenario.
<b>Pre-Requisites</b>	Basic knowledge of English grammar and the ability to speak, read and write using the English language is required.
<b>Teaching Scheme</b>	Ample tasks designed to facilitate communication through pair work, group/team work, individual and group presentations, discussions, role plays, listening to audios, watching videos, business writing and vocabulary enhancement.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to Group Discussions (GD)
2	Mock GD 1.
3	Mock GD 2.
4	Mock GD 3.
5	Interview skills: Preparing for interviews through mock interview session.
6	Writing a good and effective C.V. and SWOC presentation.
7	Assertiveness and EI: Theory inputs and activities.
8	Conducting Mock Interviews.
9	Team work activity: building blocks of a team - discussion & activity.
10	Panel Discussion.
11	Verbal Ability – I: synonyms, antonyms, homonyms, one word substitutes.
12	Verbal Ability – II: jumbled paragraphs, error corrections.
13	Summarizing and note making: techniques and important tips.
14	Personality assessment: conducting an MBTI (Myers Bigggs Type Indicator) test, self-assessment and discussion.

2. <https://nptel.ac.in/courses/109104031/>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Participate effectively in Group Discussions.
CO2	Work on their own personality through self-assessment by SWOC and MBTI.
CO3	Perform well in Personal Interviews.
CO4	Develop Vocabulary Skills.
CO5	Work effectively both as a team leader and a team member.

**Program Outcomes Relevant to the Course:**

PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO7	Function effectively both as a team leader and team member on multi disciplinary projects to demonstrate computing and management skills.
PO8	Communicate effectively and present technical information in oral and written reports.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3
CO1						1	2	3		2	2	1	2
CO2						1	2	3		2	2	1	2
CO3						1		3		2		1	2
CO4						2	3	3		2	1	1	3
CO5						1	3	3		2	2	2	3

**Part II**

**2nd Year MCA**

## Curriculum Structure

Semester III								
Type	Code	Course Title	WCH L-T-P			Credits L-T-P		
<b>THEORY</b>

Note: Courses offered under each elective are given in "List of Electives" on Page 40.

### List of Electives

Code	Elective # and Subjects
<i>Professional Elective-I</i>	
MCCS-T-PE-014	Theory of Computation
MCCS-T-PE-015	Graphics & Visual Computing
MCCS-T-PE-016	Soft Computing
MCCS-T-PE-017	Artificial Intelligence
<i>Professional Elective-II</i>	
MCCS-T-PE-018	Compiler Design
MCCS-T-PE-019	Data Warehousing & Business Intelligence
MCCS-T-PE-020	E-Commerce & Knowledge Management
MCCS-T-PE-021	Cloud Computing
<i>Professional Elective-III</i>	
MCCS-T-PE-028	Software Project Management
MCCS-T-PE-029	Big Data Analytics
MCCS-T-PE-030	Mobile Computing
MCCS-T-PE-031	Cryptography & Internet Security
<i>Professional Elective-IV</i>	
MCCS-T-PE-032	Wireless Sensor Networks
MCCS-T-PE-033	Internet of Things
MCCS-T-PE-034	Mobile Application Development
MCCS-T-PE-035	Software Testing

Type	Code	Database Management Systems	L-T-P	Credits	Marks
PC	MCCS-T-PC-011		3-1-0	4	100

<b>Objectives</b>	The objective of this course is to learn principles of systematically designing and using large scale database management systems for various real-world applications.
<b>Pre-Requisites</b>	Basic knowledge of data structures and algorithms is required.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as and when required; sessions are planned to be interactive with focus on problem solving & analysis.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Introduction to Database Systems, 3-level schema architecture, Database System Architecture; Data Models: Entity Relationship Model, Network and Object Oriented data models, Extended Entity Relationship Model, Mapping of E-R model to Relational schema.	<b>12 Hours</b>
<b>Module-2</b>	Query Language: Relational Algebra, Tuple & Domain Relational Calculus; Storage Strategies: File Organizations & Indexes, Ordered Indexes, B+ Tree Index Files, Hashing.	<b>10 Hours</b>
<b>Module-3</b>	Database Design: Functional dependency, Normalization, Normal forms: 1NF, 2NF, 3NF & BCNF, Multi-valued Dependencies, 4NF & 5NF; Query Processing and Optimization: Evaluation of Relational Algebra expressions, Query Optimization, Query Cost Estimation.	<b>14 Hours</b>
<b>Module-4</b>	Transaction Processing and Concurrency Control: Transaction concepts, ACID properties of transaction, Serializability; Concurrency Control Schemes: Locking and Timestamp schemes, Deadlock detection and recovery.	<b>10 Hours</b>
<b>Module-5</b>	Database Recovery System: Types of Database failures, Recovery techniques; Distributed Databases: Distributed database system, homogeneous distributed databases, distributed data storage, data replication and fragmentation, data transparency.	<b>10 Hours</b>
<b>Total</b>		<b>56 Hours</b>

2. <https://nptel.ac.in/courses/106105175/>
3. <https://cs145-fa18.github.io/>
4. <https://ocw.mit.edu/courses/electrical-engineering-and-computer-science/6-830-database-systems-fall-2010/lecture-notes/>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Analyze the significance of database management system in an organization and explore its various functional components and design E-R model for real life problems.
CO2	Construct queries using Relational Algebra and Relational Calculus. Investigate storage architecture, and access methods using Order Indices, B+ Tree & Hashing.
CO3	Create effective database designs using different normalization techniques and devise optimal query execution strategies.
CO4	Understand transaction processing concepts and Solve the concurrent access problems by using various concurrency control mechanisms.
CO5	Explore various database recovery techniques and advance database concepts like Distributed Database. Compare between centralized and distributed databases.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO7	Function effectively both as a team leader and team member on multi disciplinary projects to demonstrate computing and management skills.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3
CO1	2	3	2	1		1				2	2		1
CO2	3	2	2	3						3	2		1
CO3	3	3	3	2		1			1	3	1		1
CO4	1	2		2			2			1	1		1
CO5	1	2		2		2	1			1	2		2

Type	Code	Design & Analysis of Algorithms	L-T-P	Credits	Marks
PC	MCCS-T-PC-012		3-0-0	3	100

<b>Objectives</b>	The objective of this course is to study the classic algorithms in various domains, techniques for designing efficient algorithms, apply different algorithm design techniques to solve complex problems, and analyze the complexities of the solutions.
<b>Pre-Requisites</b>	Knowledge of Discrete Mathematics and Data Structures is required.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as and when required; sessions are planned to be interactive with focus on problem solving & analysis.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Introduction, Definition, Characteristics of algorithms, Growth of Functions, Asymptotic analysis, Standard notations and common functions, Recurrences, Solution of recurrences by iterative, Recursion tree, Substitution and Master method; Algorithm design techniques, Divide and conquer strategy, Merge Sort, Quick Sort.	<b>10 Hours</b>
<b>Module-2</b>	Heaps, Types of Heap, Maintaining the heap property, Building a Heap, The Heap-sort algorithm, Priority Queue; Lower bounds of sorting; Dynamic Programming, Elements of dynamic programming, Matrix chain multiplication, Longest Common Subsequence, Assembly-Line Scheduling.	<b>8 Hours</b>
<b>Module-3</b>	Greedy algorithms, Elements of Greedy strategy, Activity selection problem, Fractional Knapsack problem, Huffman codes; Backtracking and Branch & Bound techniques (n-Queen, Knapsack and Travelling Salesman Problem); Data structure for disjoint sets, Disjoint set operations.	<b>8 Hours</b>
<b>Module-4</b>	Graph algorithms and their characteristics, Breadth-first and Depth-first search, Minimum spanning trees, Kruskal and Prim's algorithms, Single-source shortest path algorithms (Bellman-Ford, Dijkstra), All-pair shortest path algorithm (Floyd-Warshall) with their analysis; Maximum flow problem, Ford-Fulkerson algorithm and its analysis.	<b>8 Hours</b>
<b>Module-5</b>	String matching algorithms (Naive, Rabin-Karp, Knuth-Morris-Pratt algorithm); NP completeness (Polynomial time, Polynomial time verification, NP completeness and reducibility), Cook's Theorem (without proof), Vertex cover, Ham-cycle, TSP; Approximation algorithm characteristics, Travelling Salesman Problem.	<b>8 Hours</b>
<b>Total</b>		<b>42 Hours</b>

#### Text Books:

4. <https://ocw.mit.edu/courses/electrical-engineering-and-computer-science/6-042j-mathematics-for-computer-science-fall-2010/video-lectures/>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explain and analyze complexities of algorithms and apply divide & conquer strategy for sorting problems.
CO2	Compare different sorting algorithms and use dynamic programming technique for solving optimization problems.
CO3	Apply various algorithm design techniques such as greedy, backtracking, and branch-and-bound in real life problems.
CO4	Model an engineering problem using graphs and develop algorithms to solve the problem.
CO5	Compare various pattern matching algorithms, understand NP complete problems, and design approximation algorithms for some of these problems.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Apply supervised learning to solve related real-life problems.
CO2	Analyze a problem and select the most suitable supervised model for the same.
CO3	Apply classification & regression models such as SVM and decision models.
CO4	Perform clustering of given data with extraction of important features.
CO5	Apply the concepts of reinforcement learning to solve relevant real-life problems.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Automata Theory, Computability theory, Complexity theory, Mathematical notations & terminology; Alphabet, String, Languages & operations on strings; Formal definition of DFA, Transition function, Transition table, State transition diagram, Extended transition function, Language of DFA, Design of DFA; Finite Automata (Non-deterministic): Formal definition, Extended transition function, Language of NFA, Equivalence of DFA and NFA, NFA with $\epsilon$ -transition: Formal definition of NFA ( $\epsilon$ ), Extended transition function, Language of NFA ( $\epsilon$ ), Eliminating $\epsilon$ -transitions from NFA, conversion from $\epsilon$ -NFA to DFA, Minimization of DFA.	<b>9 Hours</b>
<b>Module-2</b>	Moore Machines, Mealy Machines; Regular Expressions: Operators in Regular Expressions (RE) and their precedence, Definition of RE, Building REs, From DFA to RE, RE to DFA, Arden's theorem, Pumping Lemma for Regular languages, Closure properties of Regular languages.	<b>8 Hours</b>
<b>Module-3</b>	Introduction to Grammars: Definition, Derivation of string, Leftmost and Rightmost derivation; Definition of Left and right linear grammars, Regular grammars; Context free grammars: Definition, Derivation of string, Language of CFG, Parse Tree, Ambiguity in Grammar, Elimination of ambiguity; Normal Forms of CFG: Chomsky and Greibach Normal Forms, Converting CFG to CNF & GNF, Cook, Younger, Kasami Algorithm, Closure properties of context free languages.	<b>9 Hours</b>
<b>Module-4</b>	Push Down Automata: Basic Model, Components, Moves of a PDA, ID of a PDA, Design of a PDA, PDA to CFG and CFG to PDA conversion, Pumping Lemma for CFL; Turing Machines: Model, Components, Move of a TM, ID of TM, Design of a TM, Variation of Turing Machine model, Universal Turing Machine and Undecidable problems.	<b>8 Hours</b>

*Cont'd...*

Module-#	Topics	Hours
Module-5	Church Turing hypothesis, Recursive & recursively enumerable sets, Chomsky's hierarchy of languages; Undecidability of Post Correspondence problem; Linear Bounded Automata & Context Sensitive languages, Primitive Recursive functions: $\mu$ -Recursive functions, Ackermann's function, Excursiveness of Ackermann and Turing computable functions, Cantor & Godel numbering; NP Completeness: P and NP, NP complete and NP Hard problems.	8 Hours
<b>Total</b>		<b>42 Hours</b>

**Text Books:**

- T1. J. E. Hopcroft, R. Motwani, and J. D. Ullman, *Introduction to Automata Theory, Languages and Computation*, 3<sup>rd</sup> Edition, Pearson Education, 2007.
- T2. P. Linz, *An Introduction to Formal Languages and Automata*, 4<sup>th</sup> Edition, Jones & Bartlett Learning, 2006.

**Reference Books:**

2. <https://nptel.ac.in/courses/106/106/106106049/>: by Prof. K. Krithivasan, IIT Madras
3. <https://nptel.ac.in/courses/106/105/106105196/>: by Prof. S. Mukhopadhyay, IIT Kharagpur
4. <https://www.ics.uci.edu/~goodrich/teach/cs162/notes/>: by Prof. M. T. Goodrich, University of California, Irvine, USA

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Develop and implement mathematical models with DFA, NFA for regular languages and grammar for real life applications.
CO2	Design and implement grammar and PDA for context free languages and demonstrate their properties.
CO3	Construct Turing machines for context sensitive and un-restricted languages.
CO4	Describe the Chomsky hierarchy of Formal Languages and Grammar.
CO5	Illustrate the relevance of the Church-Turing thesis, explain the concept of decidability & recursive enumerability, and classify a given language to the P, NP or NPC complexity classes.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.

*Cont'd...*

PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3

Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Basic of Computer Graphics, Applications of computer graphics, Display devices, Random and Raster scan systems, Graphics input devices, Graphics software and standards.	<b>6 Hours</b>
<b>Module-2</b>	Points, lines, circles and ellipses as primitives, scan conversion algorithms for primitives, Fill area primitives including scan-line polygon filling, inside-outside test, boundary and flood-fill, character generation, line attributes, area-fill attributes, character attributers.	<b>8 Hours</b>
<b>Module-3</b>	2D and 3D Transformations (translation, rotation, scaling), matrix representation, homogeneous coordinates, composite transformations, reflection and shearing, viewing pipeline and coordinates system, window-to-viewport transformation, clipping including point clipping, line clipping (cohen-sutherland, liang- bersky ), polygon clipping.	<b>10 Hours</b>
<b>Module-4</b>	3D display methods, polygon surfaces, tables, equations, meshes, curved lies and surfaces, quadric surfaces, spline representation, cubic spline interpolation methods, Bazier curves and surfaces, B-spline curves and surfaces , general (parallel and perspective) projection transformations.	<b>10 Hours</b>
<b>Module-5</b>	Visible surface detection concepts, back-face detection, depth buffer method, illumination, light sources, illumination methods (ambient, diffuse reflection, specular reflection), Color models: properties of light, XYZ, RGB, YIQ and CMY color models, introduction to animation.	<b>8 Hours</b>
<b>Total</b>		<b>42 Hours</b>

2. [https://www.tutorialspoint.com/computer\\_graphics/index.htm](https://www.tutorialspoint.com/computer_graphics/index.htm)

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Apply concepts of graphics system, output primitives such as VDU, raster-scan, random scan, line drawing algorithms, basic transformation and matrix representation to represent various patterns in 2-dimensions.
CO2	Transform real-world objects to any view-ports, and compare the accuracy and quality of the images in both the coordinate systems especially for live video streaming.
CO3	Apply the process of line clipping, polygon clipping, aliasing and anti aliasing, two dimensional object representation, fractal geometry, three dimensional geometric representations to display real-world objects.
CO4	Exhibit projection, 3D-transformation of objects and represent multiple images in a scene with visible surface detection mechanisms such as Z-Buffer, A-Buffer, Painter's and scan-line algorithms.
CO5	Employ Illumination and polygon rendering techniques such as Back-Face detection, Gouraud Shading, Phong-Shading to various 3-dimensional images, design various animation applications using Virtual Reality environment.

#### Program Outcomes Relevant to the Course:

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.

#### Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3
CO1	1	1	2	1							2	1	1
CO2	3	1	2	1							3	1	1
CO3	3	2	3	2							1		
CO4	1	1	2			2					2	1	1
CO5	3	2	2	1							1		

Type	Code	Soft Computing	L-T-P	Credits	Marks
PE	MCCS-T-PE-016		3-0-0	3	100

<b>Objectives</b>	The objective of this course is to study the fundamentals of non-traditional computing techniques and approaches to solve complex real-life problems with approximate models. The course will also cover different aspects of hybridization along with some case studies.
<b>Pre-Requisites</b>	Knowledge of linear algebra, algorithm design, and data structures is required for this course.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as needed, sessions are planned to be interactive with examples, problem solving and programming activities.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Fuzzy Logic: Basic definition and terminology of fuzzy set, set theoretic operations, T-norm, T-conorm, Membership function formulation and parameterization, Extension Principle, Fuzzy relations, Linguistic variables, fuzzy if-then rules, Compositional rule of inference, fuzzy reasoning, fuzzy inference systems, Mamdani fuzzy models, Defuzzification, Sugeno fuzzy models, Tsukamoto fuzzy models.	<b>10 Hours</b>
<b>Module-2</b>	Genetic Algorithm: Introduction to Genetic Algorithm, Working cycle of a GA, Binary Coded GA, GA-parameter setting, Constraint Handling GA, Advantages and disadvantages of GA, Some specialized GA – Real Coded GA.	<b>8 Hours</b>
<b>Module-3</b>	Neural Network-I: Introduction, Models of a neuron, Network Architecture, Knowledge Representation; Learning Process, Error correction learning, Memory based learning, Hebbian learning, Competitive learning, Boltzmann learning, Learning with a teacher, Learning without a teacher; Single layered learning – Least Mean Square Algorithm, Perceptron, Perceptron Convergence algorithm.	<b>10 Hours</b>
<b>Module-4</b>	Neural Network-II: Multilayer perceptron – Back-propagation algorithm, XOR Problem, Heuristics for Back-Propagation algorithm; Self-organizing maps – Two basic feature mapping models, SOM algorithm.	<b>8 Hours</b>
<b>Module-5</b>	Hybrid Systems: Combination of Genetic Algorithms with Fuzzy Logic or Neural Networks, Combination of Neural Network and Fuzzy Logic.	<b>6 Hours</b>
<b>Total</b>		<b>42 Hours</b>

#### Text Books:

2. <http://cse.iitkgp.ac.in/~dsamanta/courses/sca/index.html>: by Prof. D. Samanta, IIT Kharagpur.

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Apply fuzzy logic and fuzzy inference system concepts to design automation systems for real life problems.
CO2	Apply the concepts of genetic algorithm to solve engineering optimization problems.
CO3	Use the concepts of ANNs to solve real life engineering and societal problems.
CO4	Appreciate the use of advanced ANN concepts and self-organizing maps to solve a variety of engineering problems.
CO5	Envisage the need of hybridization, and to develop hybrid models for solving complex problems.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Artificial Intelligence: Introduction, Intelligent Agents - Agents and Environment, Good Behavior, Nature of Environments, Structure of Agents; Problem Solving: Solving Problems by Searching, Problem-Solving Agents, Example Problems, Searching for Solutions, Uninformed Search Strategies, Searching with Partial Information.	<b>8 Hours</b>
<b>Module-2</b>	Informed Search and Exploration: Informed (Heuristic) Search Strategies, Heuristic Functions, Local Search Algorithms & Optimization Problems; Constraint Satisfaction Problems (CSPs): Introduction, Backtracking Search for CSPs, Local Search for CSPs; Adversarial Search: Games, Optimal Decisions in Games, Alpha-Beta Pruning.	<b>9 Hours</b>
<b>Module-3</b>	Knowledge & Reasoning: Knowledge-Based Agents, The Wumpus World; Logic: Propositional Logic & Reasoning Patterns; First-Order Logic: Syntax and Semantics, Using FOL, Knowledge Engineering in FOL; Inference in FOL: Propositional vs. FOL, Unification and Lifting, Forward Chaining, Backward Chaining, Resolution; Knowledge Representation: Ontological Engineering, Categories & Objects, Semantic Networks, Frames.	<b>9 Hours</b>
<b>Module-4</b>	Planning: The Planning Problem, Planning with State-Space Search, Partial-Order Planning, Planning Graphs; Uncertain Knowledge & Reasoning: Acting under Uncertainty, Basic Probability Notations, Bayes' Rule and its use; Probabilistic Reasoning: Representing Knowledge in an Uncertain Domain, Semantics of Bayesian Networks.	<b>8 Hours</b>
<b>Module-5</b>	Learning: Learning from Observations, Forms of Learning, Inductive Learning, Learning Decision Trees; Statistical Learning Methods: Instance Based Learning, Neural Networks; Reinforcement Learning: Passive and Active Reinforcement Learning; Communication: Communication as Action, A Formal Grammar for a Fragment of English, Syntactic & Semantic Analysis; Expert Systems: Introduction, Architecture, Representations.	<b>8 Hours</b>
<b>Total</b>		<b>42 Hours</b>

3. <https://nptel.ac.in/courses/106106140/>: by Prof. D. Khemani, IIT Madras

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explore agents and working environments with utilization of uninformed techniques in state space search.
CO2	Apply search techniques for Game playing and solving constraint satisfaction problems.
CO3	Interpret logic & inference rules for decision making & knowledge representation.
CO4	Apply planning and reasoning to handle uncertainty in real life problems.
CO5	Use learning to solve complex real-life problems and design of expert systems.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.

### Detailed Syllabus

Module-#	Topics	Hours		
<b>Module-1</b>	Overview of Compilation: Structure of a compiler, Applications of compiler technology; Lexical analysis - The role of a lexical analyzer, specification of tokens, recognition of tokens, LEX, examples of LEX programs.	<b>6 Hours</b>		
<b>Module-2</b>	Introduction to Syntax Analysis: Role of a parser, Use of context-free grammars (CFG) in the specification of the syntax of programming languages, techniques for writing grammars (removal of left recursion, etc.), non context-free constructs, parse trees and ambiguity, examples of programming language grammars.	<b>7 Hours</b>		
<b>Module-3</b>	Top-down Parsing: FIRST & FOLLOW sets, LL(1) conditions, Predictive parsing, Recursive descent parsing, Error recovery; LR-parsing: Handle pruning, Shift-reduce parsing, Viable prefixes, Valid items, LR(0) automaton, LR-parsing algorithm, SLR(1), LR(1), and LALR(1) parsing; YACC, Error recovery with YACC, Examples of YACC specifications.	<b>10 Hours</b>		
<b>Module-4</b>	Syntax-directed Definitions (Attribute Grammars): Synthesized and inherited attributes, Examples of SDDs, Evaluation orders for attributes of an SDD, Dependency graphs, S-attributed and L-attributed SDDs; Semantic Analysis: Symbol tables and their data structures, Representation of "scope", Semantic analysis of expressions, Assignment and control-flow statements, Declarations of variables and functions, Function calls, etc.	<b>7 Hours</b>		
<b>Module-5</b>	Intermediate Code Generation: Different intermediate representations – Quadruples, Triples, Trees Translation of expressions and assignment statements; Translation of Control-flow Statements: if-then-else, while-do, and switch; Short-circuit code, Back patching.	<b>6 Hours</b>		
<b>Module-6</b>	Run-time Environments: Stack allocation of space and activation records, Access to non-local data on the stack in the case of procedures with and without nesting of procedures; Introduction to machine code generation and optimization: Simple machine code generation, examples of machine-independent code optimization.	<b>6 Hours</b>		
<b>Total</b>				<b>42 Hours</b>

5. <http://openclassroom.stanford.edu/MainFolder/VideoPage.php?course=Compilers&video=01-01-introduction&speed=100>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explain different phases of compilation and finite automaton for compiler design.
CO2	Explore syntax-directed translation schemes, methods and strategies for parsing.
CO3	Design and develop different parsers to meet the particular language constructs.
CO4	Apply language constructs using semantic analysis techniques and use of symbol tables.
CO5	Generate intermediate code using various translation schemes for optimality and performance.
CO6	Visualize run-time environments and apply code optimization techniques.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Data warehousing: Introduction, Difference between operational databases and data warehouses, Three tier architecture of data warehouse, Data marts, Data staging area, Metadata.	<b>8 Hours</b>
<b>Module-2</b>	OLAP in the Data Warehouse: Demand for online analytical processing, need for multidimensional analysis, fast access and powerful calculations, limitations of other analysis methods, OLAP definitions and rules, OLAP characteristics, major features and functions, general features, Dimensional analysis, Hypercubes, Drill-down and Roll-up, Slice-and-dice or Rotation, OLAP models, MOLAP and ROLAP models.	<b>8 Hours</b>
<b>Module-3</b>	Data Mining Basics: Introduction, application areas in data mining, KDD process, Getting to know your data: Data Objects and Attributes types, Data Pre-processing: Why pre-process data? Data cleaning, Data integration, Data transformation and Reduction.	<b>10 Hours</b>
<b>Module-4</b>	Mining Frequent Patterns, Associations and Correlations: Introduction, Market Basket Analysis, Frequent Item-set Generation using Apriori algorithm, Rule generation, Alternative methods for generating Frequent Item-sets using FP-Growth Algorithm, Evaluation of Association Patterns, from Association Analysis to Correlation Analysis.	<b>8 Hours</b>
<b>Module-5</b>	Business Intelligence: Definition, Business Intelligence Decision Support Initiative, Development approaches, Engineering stages and the development steps, Business Intelligence project team structure, managing a Business Intelligence project, Project planning activities, Deliverables, General business requirements, the interviewing process, Data analysis, Data cleaning.	<b>8 Hours</b>
<b>Total</b>		<b>42 Hours</b>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explain the need of data warehousing and the building blocks of a data warehouse.
CO2	Apply the different models of multidimensional data analysis.
CO3	Examine and pre-process, transform, integrate and reduce the data as per the needs.
CO4	Generate frequent item-sets for pattern mining and frame association rules.
CO5	Comprehend the significance of business intelligence and decision support systems.

#### Program Outcomes Relevant to the Course:

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Describe the fundamentals of e-commerce and its relevance to society.
CO2	Explain various e-commerce revenue models and online marketing strategies.
CO3	Discuss B2B activities, Electronic Data Interchange, Supply Chain Management, Mobile Commerce and e-Logistics.
CO4	Explain technical aspects of e-commerce with respect to Hardware and Software components.
CO5	Compare available e-commerce solutions and knowledge management technologies.

**Program Outcomes Relevant to the Course:**

PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.

Module-#	Topics	Hours
<b>Module-1</b>	Introduction: Client/Server systems, Thin & Thick Clients, Centralized Computing, Parallel & Distributed Computing, Amdahl's Law, P2P Computing, Cluster Computing, Grid Computing, Utility Computing, Autonomic Computing, Hosting, Data Center, Convergence of Technologies, Cloud Computing, NIST definition, Characteristics, Service Models, Deployment Models, Cloud Service Examples, Cloud-based Services & Applications.	<b>9 Hours</b>
<b>Module-2</b>	Cloud Concepts & Technologies: Virtualization, Load Balancing, Scalability & Elasticity, Deployment, Replication, Monitoring, Software Defined Networking (SDN), Network Function Virtualization, MapReduce, Identity & Access Management, Service Level Agreements (SLA), Billing.	<b>9 Hours</b>
<b>Module-3</b>	Cloud Services & Platforms: Compute Services, Storage Services, Database Services, Application Services, Content Delivery Services, Analytics Services, Deployment & management Services, Identity & Access Management Services, Open Source Private Cloud Software - CloudStack, Eucalyptus, OpenStack.	<b>8 Hours</b>
<b>Module-4</b>	Cloud Application Design: Considerations for scalability, reliability, availability, security, maintenance and upgradation, performance; Reference Architecture for Cloud Applications, Cloud Application Design Methodologies, Data Storage Approaches; Cloud Application Benchmarking & Tuning, Workload Characteristics, Application Performance Metrics, Benchmarking Tools, Deployment Prototyping, Load Testing & Bottleneck Detection.	<b>9 Hours</b>
<b>Module-5</b>	Cloud Security: Introduction, Security Issues in the Cloud, Components of Security, Attacks & classes of Threats, CSA Security Architecture, Authentication, Authorization, Identity & Access Management, Infrastructure Security, Data Security, Key Management, Auditing & Compliance.	<b>7 Hours</b>
<b>Total</b>		<b>42 Hours</b>

4. <http://web.mit.edu/6.897/www/readings.html>: by Prof. Hari Balakrishnan, MIT

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Describe computing paradigms and explain standard cloud computing models.
CO2	Explain key concepts along with the enabling technologies of cloud computing.
CO3	Appreciate various types of cloud computing services and user-access management.
CO4	Visualize design principles and methodologies for developing applications on the cloud.
CO5	Assess the importance of security & privacy of data in cloud environment.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO8	Communicate effectively and present technical information in oral and written reports.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3
CO1	2		1		1			1	1		1		1
CO2	2		1		2			1	1	1	1		1
CO3	2		3		2			1	1	1	1		2
CO4	2		3		2			1	2	1	2		2
CO5	2		3		2			1	1	1	2	2	1

Type	Code	Database Management Systems Lab	L-T-P	Credits	Marks
PC	MCCS-P-PC-022		0-0-2	1	100

<b>Objectives</b>	The objective of this lab course is to provide a hands-on practice on database design, creation, data storage, and data manipulation including advanced database programming concepts to groom the students into well-informed database programmers and data-driven application developers.
<b>Pre-Requisites</b>	Basic analytical skills and knowledge of programming language are required.
<b>Teaching Scheme</b>	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to Oracle databases, simple queries for data retrieval.
2	Using single-row functions and group function in SQL queries for data retrieval.
3	Writing complex queries using sub-queries
4	Use DDL and various constraints for design of tables
5	Data manipulation using various DML statements.
6	Retrieve data from multiple tables using various types of JOIN operations.
7	Create, alter, and manage Views from single & multiple base tables.
8	Create and use other data base objects like sequence, indexes, and synonyms.
9	Introduction to PL/SQL, identifiers, literals, and keywords
10	Write PL/SQL block by using conditional statements and expressions.
11	Using different types of Loops in a PL/SQL block.
12	Implement Exception Handling in a PL/SQL block.
13	Write PL/SQL block to retrieve data using CURSORS
14	Introduction to Stored Procedures, Write PL/SQL block using procedures.

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Construct queries using SQL and retrieve data from a database using single/multi-row functions, and sub-queries.
CO2	Design relational tables imposing integrity constraints, operate on table using DDL/DML statements and share data using join.
CO3	Create other database objects like views, sequences and indices.
CO4	Write PL/SQL programs including control structures, and loops for real-world applications.
CO5	Implement the techniques using exception handling Procedures, and Functions, Parameters in PL/SQL.

**Program Outcomes Relevant to the Course:**

PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

Type	Code	Design & Analysis of Algorithms Lab	L-T-P	Credits	Marks
PC	MCCS-P-PC-023		0-0-2	1	100

<b>Objectives</b>	The objective of this course is To implement various algorithms under different categories, analyze algorithms & their complexities, and implement approximation algorithms for NP hard problems.
<b>Pre-Requisites</b>	Basic knowledge of C Programming and Data Structures is required.
<b>Teaching Scheme</b>	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Design C programs using structure to implement insertion, deletion, BST.
2	Sort a given set of elements using the Quick-sort method and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted.
3	Implement Merge Sort algorithm to sort a given set of elements and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted.
4	Implement Heap Sort algorithm to sort a given set of elements and determine the time required to sort the elements.
5	Obtain the Topological ordering of vertices in a given digraph.
6	Implement 0/1 Knapsack problem using Dynamic Programming.
7	Implement BFS algorithm in a digraph and check whether a given graph is connected or not using DFS method.
8	Implement Dijkstra's algorithm to find the shortest path in weighted connected graph.
9	Find Minimum Cost Spanning Tree of a given undirected graph using Kruskal's algorithm.
10	Find Minimum Cost Spanning Tree of a given undirected graph using Prim's algorithm.
11	Implement All-Pairs Shortest Paths Problem using Floyd's algorithm. Parallelize this Algorithm.
12	Implement N Queen's problem using Back Tracking.
13, 14	Design an algorithm to find the optimal solution for the TSP and then solve the same problem using any approximation algorithm and determine the error in the approximation.

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Design C programs using structure to implement insertion, deletion, searching of a BST.
CO2	Implement comparison-based sorting algorithms and computing the time required.
CO3	Construct C programs for algorithms based on Divide & Conquer, Dynamic Programming and Greedy techniques.
CO4	Design C program for Graph traversal algorithms.
CO5	Implement N-Queen using Backtracking.
CO6	Implement a scheme to find the solution of Travelling Salesman Problem.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.

Type	Code	Python Programming Lab	L-T-P	Credits	Marks
PC	MCCS-P-PC-024		0-0-4	2	100

<b>Objectives</b>	The objective of the course is to give the students hands-on practice on Using Python programming language from fundamentals to advanced programming and solving problems using the Python programming language.
<b>Pre-Requisites</b>	Basic analytical and logical understanding including basic knowledge of Python is required.
<b>Teaching Scheme</b>	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Compilation and execution of simple python programs.
2	Programs using data types and operators.
3	Formulate problems using Sting handling operators and functions.
4	Programs using Input and Output statements.
5	Programs on decision making using if else, nested if else and else if ladder.
6	Implement loop-control structures using for and while loops.
7, 8	Programs using python built in data structures(List, Dictionary, tuple, set).
9	Develop programs using functions.
10	Programs using recursive function.
11	Formulate problems and write programs using modules.
12	Develop programs using random and time module.
13	Develop programs using Packages.
14, 15	Programs on creating and using Class and Object.
16, 17	Formulate problems on Inheritance and write programs.
18	Programs on Exception Handling.
19	Formulate problems on file handling and develop programs.
20	Write programs to perform file Input/Output operations.
21, 22	Programs on database Connectivity.
23	Programs on Regular expression.
24, 25	Develop programs using CGI.
26, 27, 28	Develop GUI programs using Tkinter.

#### Text Books:

3. <https://help.uis.cam.ac.uk/service/help-support/training/downloads/course-files/programming-student-files/python-courses/>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Develop simple real life application in python using operators and control statements.
CO2	Use python data structure and function to develop application.
CO3	Interpret object orient concept and use it for software development.
CO4	Conveniently use file handling and database connectivity concept.
CO5	Become familiar with CGI and develop real-life web application.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

Type	Code	User Interface Design Lab	L-T-P	Credits	Marks
PC	MCCS-P-PC-025		0-0-4	2	100

<b>Objectives</b>	The objective of this course is to provide hands-on exposure on development of static & interactive User Interfaces for web based applications.
<b>Pre-Requisites</b>	Knowledge on programming, internet and browsers is required.
<b>Teaching Scheme</b>	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Web Browsers - Internet Explorer, Chrome, Mozilla Firefox; Browser Settings and options, Security features, Cookies, Temporary files, etc.
2	Working of Application Layer Protocols - HTTP, FTP and SMTP.
3	HTML - Basics of HTML, text, image, MIME types, lists, tables.
4	Creating Web Forms and Use of HTTP GET & POST Methods.
5	Embedding audio and video on web page, Image Map and Anchor Tag.
6	CSS - Introduction to Style Sheets.
7	Use of CSS2, CSS3, DIV and SPAN tags.
8	User interface (UI) software architecture.
9	Wireframe and Screen Prototyping.
10	Layout planning & design for web applications.
11	Information visualization & Graphics design
12	Color design and typography.
13	Accessibility & Internationalization.
14	Animation, Input/output technology.
15	Mobile user interfaces & Responsive design.
16	JavaScript - Introduction to Client side Script, Document Object Model (DOM).
17	JavaScript - Use of Different Elements of DOM.
18	Form Validation using JavaScript.
19	Regular Expressions in JavaScript.
20	Form validation using Regular Expressions.
21	Errors and user control.
22	Browser Developer Tools.
23	XML - Introduction to Extensible Markup Language.
24	JSON object in JavaScript.
25	Local Storage in JavaScript.

Cont'd...

Experiment-#	Assignment/Experiment
26	Project Assignment (requirements, test scenarios & implementation criteria).
27	Development of assigned project using various web technologies.
28	Demonstration of working project, presentation, viva and evaluation.

3. [https://www.tutorialspoint.com/html/html\\_javascript.htm](https://www.tutorialspoint.com/html/html_javascript.htm): Javascript working examples and practice sets

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explain the working of Browsers and Internet protocols.
CO2	Create web pages using HTML and CSS as per specifications.
CO3	Design wireframes and screen prototypes for web applications.
CO4	Develop interactive web pages using JavaScript, XML and JSON.
CO5	Create and host full fledged user interactive web site, using various tools and languages.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Describe fundamentals of software engineering and life cycle models.
CO2	Conduct requirements analysis, estimation, planning, scheduling, and other software project management activities.
CO3	Create high-level & detail-level design of a software using various design methodologies.
CO4	Visualize object oriented approach for software design using Unified Modeling Language.
CO5	Code, review, test and maintain software products confirming to quality standards.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO7	Function effectively both as a team leader and team member on multi disciplinary projects to demonstrate computing and management skills.
PO8	Communicate effectively and present technical information in oral and written reports.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.

Module-#	Topics	Hours
<b>Module-1</b>	Architecture of Web Applications, Apache HTTP Server, Basics of web applications, Programming with PHP: Configuration and the php.ini file, Variables, Strings, Constants, Operators and Flow Control, Strings and Arrays, Date and Time, Strings & Patterns.	<b>10 Hours</b>
<b>Module-2</b>	Session and Cookies, PHP Exception Handling; OOP using PHP: Classes and objects, Constructor & Destructor, Inheritance, Static methods and properties, Method overloading, Abstract Class & Interfaces.	<b>8 Hours</b>
<b>Module-3</b>	MySQL Database: Introduction to MySQL, Features; Querying a Web Database: CREATE, ALTER, DELETE, DROP, INSERT, UPDATE, DELETE; Database Programming: PHP MySQL Functions, n-Tier Architecture; File Programming: File & Directory functions, File Handling, read & write, upload & download.	<b>8 Hours</b>
<b>Module-4</b>	JavaScript in Web Applications: JavaScript and the DOM, jQuery basics and how it works, jQuery Core Features: DOM manipulation, Event handling, AJAX support, Animation, jQuery useful resources, AJAX Core Concept: AJAX basics, Handling AJAX HTTP requests and responses; Working with JSON, Introduction to Angular JS.	<b>8 Hours</b>
<b>Module-5</b>	Using Frameworks: MVC Architecture, The CodeIgniter Framework, Simple CRUD Operation (CREATE, READ, UPDATE, DELETE, SEARCH); API Fundamentals, Web Services (SOAP), Creating REST Services.	<b>8 Hours</b>
<b>Total</b>		<b>42 Hours</b>

6. <https://angular.io/guide/architecture>: Angular JS Documentation

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explain web server architecture and develop simple server side web pages using PHP language.
CO2	Apply object oriented programming concepts to develop PHP web applications.
CO3	Design n-Tier database driven web application with file upload/download support.
CO4	Use AJAX programming techniques to develop rich interactive internet applications.
CO5	Utilize third party MVC frameworks to build scalable web applications.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3

CO5	3	2	3	1	3	1				2	2	1	1

Type	Code	Software Project Management	L-T-P	Credits	Marks
PE	MCCS-T-PE-028		3-0-0	3	100

<b>Objectives</b>	The objective of this course is to introduce various activities involved in managing software projects including product life cycle, umbrella activities like project planning, quality assurance, risk management, tracking, closure and various other activities during different phases of software development.
<b>Pre-Requisites</b>	Knowledge of software engineering and programming languages is required.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as required and interactive sessions with focus on case studies & different scenarios faced by project managers.

### Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Introduction: Product Life Cycle - Idea generation, Prototype Development Phase, Alpha Phase, Beta Phase, Production and Maintenance Phase. Project Life Cycle Models - Water fall Model, Prototype Model, RAD and Spiral Model. Process Models.	<b>8 Hours</b>
<b>Module-2</b>	Umbrella Activities: Metrics – roadmap, Strategy, Targets and tracking, Acting on data; Software Configuration Management - Process and activities of SCM, Configuration audit, Metrics in SCM, Tools and automation; Software Quality Assurance - Quality Control and Assurance, Cost and benefits of quality, Tools and automation, SQA role; Risk Management - Risk Management Cycle, Risk Identification, Quantification, Monitoring, Mitigation, Metrics in Risk Management.	<b>9 Hours</b>
<b>Module-3</b>	Project Management Processes and Activities: Project Life Cycle In-Stream activities, Project initiation - Activities, Outputs, Quality Records, Completion criteria, Project Planning and Tracking - Components, Activities specific to project tracking, Project Closure - Effective closure Process, Issues, Metrics for Project Closure.	<b>9 Hours</b>
<b>Module-4</b>	Engineering Activities in Project Lifecycle: Software requirement gathering - Inputs and start criteria, Dimensions, Steps, Output and Quality records, Skill sets, Challenges, Metrics for Requirement Phase. Estimation –Three Phases of Estimation, Methodology, Formal models for size estimation, Challenges, Metrics for Estimation Process. Design and Development Phases – Features, Reusability, Testability and Maintainability. Project Management in Testing and Maintenance Phases.	<b>8 Hours</b>
<b>Module-5</b>	Emerging Trends: Globalization Issues in Project management - Evolution, Challenges and Models. Impact of the internet on Project Management - Effect of internet on Project Management, Managing project for internet, Effects on Project Management activities. People Focused Process Models - People centric models, P-CMM, Other people focused models.	<b>8 Hours</b>
<b>Total</b>		<b>42 Hours</b>

**Text Books:**

- T1. R. Gopalaswamy, *Managing Global Software Projects*, 17<sup>th</sup> Edition, McGraw-Hill Education, 2016.

3. <https://www.stellman-greene.com/about/applied-software-project-management/applied-software-project-management-slides/>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explain Product Life Cycle Phases and Project Life Cycle Models like Water fall Model, Prototype Model, RAD and Spiral Model.
CO2	Analyze and plan various umbrella Activities like Metrics target setting and tracking, Software Configuration Management, Software Quality Assurance and Risk Management.
CO3	Model Project Management Processes such as Project Life Cycle In-Stream activities, Project Planning and Tracking and Project Closure.
CO4	Execute Project Management activities in Software requirement gathering, Estimation, Design, Development, Testing and Maintenance Phases.
CO5	Realize the Emerging Trends in Project Management like Globalization Issues, Impact of the internet on Project Management, People Focused Process Models and P-CMM.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO7	Function effectively both as a team leader and team member on multi disciplinary projects to demonstrate computing and management skills.
PO8	Communicate effectively and present technical information in oral and written reports.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

Module-#	Topics	Hours
<b>Module-1</b>	Introduction to Big Data, Data Management for Big Data, Data Exploration and Reproducibility, Data Quality; Introduction to Map Reduce, Map Reduce algorithm, Patterns & relations, Parallel databases vs. Map Reduce, Storage solutions.	<b>8 Hours</b>
<b>Module-2</b>	Big Data Algorithms-I: Nearest Neighbor Search, Shingling of Documents, Similarity Preserving Summaries of Sets, Locality Sensitive Hashing for Documents, Distance Measures, Theory of Locality Sensitive Functions, LSH Families for High Degree of Similarities.	<b>10 Hours</b>
<b>Module-3</b>	Big Data Algorithms-II: Streaming Data Models, Sampling Data in a Stream, Filtering Streams, Counting Distinct Elements in a Stream, Estimating Moments, Counting Ones in Window, Page Rank, Efficient Computation of Page Rank, Topic Sensitive Page Rank.	<b>10 Hours</b>
<b>Module-4</b>	Big Data Algorithms-III: Clustering Techniques - BFR Algorithm, CURE Algorithm, Clustering in Non-Euclidean Space, Clustering for Streams and Parallelism; Matrix Factorization, Recommendation Systems and Collaborative Filtering.	<b>8 Hours</b>
<b>Module-5</b>	Introductions to Spark, Hadoop, Hive, Pig-Latin, Large Scale Visualization.	<b>6 Hours</b>
<b>Total</b>		<b>42 Hours</b>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explain the concepts of Big Data and Map Reduce techniques.
CO2	Apply different tools and techniques used for finding similar items.
CO3	Demonstrate application of algorithms for analysis of streaming data and link analysis.
CO4	Apply different techniques to design recommendation systems & collaborative filtering and compare the effect of different clustering techniques on large datasets.
CO5	Explore the concepts of Hadoop, MapReduce, Spark and their applications on big data.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explain current technological implementation in GSM network.
CO2	Assess the capabilities of GSM and wireless technologies in network design and operation.
CO3	Evaluate network protocols, routing algorithms, connectivity methods and characteristics.
CO4	Describe wireless network topologies, wireless connectivity and characteristics, and the significance of security & Internet communications.
CO5	Apply appropriate wireless technologies in commercial & enterprise applications.

#### Program Outcomes Relevant to the Course:

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.

2. <https://nptel.ac.in/courses/106/105/106105162/>: by Prof. S. Mukhopadhyay, IIT Kharagpur

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Describe the security objectives and security threats that affect our sensitive data.
CO2	Acquire a mathematical foundation of cryptography through modular arithmetic, number theory, integer factorization, and discrete logarithms.
CO3	Analyze and compare traditional and modern symmetric key cryptography algorithms.
CO4	Explain public key cryptography algorithms and their applications and use of hash functions in message integrity and authentication.
CO5	Apply cryptography techniques for securing data on the Internet and realize the need of firewall & IDS technology.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Describe different types of wireless networks, their architecture and supporting protocols.
CO2	Explain the hardware & software of WSNs and MAC layer protocols to address media accessing.
CO3	Analyze the network & transport layer protocols to address issues like addressing, route optimization, handover, and reliability.
CO4	Explain architecture of WSN middleware, identify security issues and apply necessary countermeasures.
CO5	Apply various WSN platforms and tools to design real world applications.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.

<b>Objectives</b>	The objective of this course is to study different security goals and mechanisms with primary focus on cryptography techniques used to protect from various security threats in computer networks and Internet.
<b>Pre-Requisites</b>	Basic knowledge of computer networks, sensor network, micro-processor and micro-controllers is required for this course.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as needed, sessions are planned to be interactive with examples, programming, and idea generation activities.

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Introduction to IoT: Definition, Characteristic, Components of IoT, Design of IoT systems, Technology and systems implementing IoT, Levels of IoT, Sensors, Actuators, Power Supply.	<b>8 Hours</b>
<b>Module-2</b>	IoT Network Model: OSI reference model, Layers in IoT; Protocols: MAC based Protocols, IP based Protocols, Simple Network Management Protocol (SNMP), NetConf, Yang.	<b>10 Hours</b>
<b>Module-3</b>	M2M: IoT vs M2M, Software Defined Networking, Network Function Virtualization; IoT Platform Design: IoT Design Methodology, Resource Management in IoT, Data Synchronization.	<b>9 Hours</b>
<b>Module-4</b>	Devices: Zigbee, Bluetooth, Wi-fi, RFID, Cloud Computing, Big Data.	<b>9 Hours</b>
<b>Module-5</b>	Case Studies: IoT in Smart Home, Smart Grid, Agriculture, Healthcare, Smart Industry, Environment, Smart Cities.	<b>6 Hours</b>
<b>Total</b>		<b>42 Hours</b>

P.T.O

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Describe basic concepts of IoT, its architecture and system design.
CO2	Visualize the communication mechanisms between sensors and systems using various protocols and network models.
CO3	Explain IoT with respect to machine to machine and design IoT systems with data synchronization and resource manipulation.
CO4	Describe advanced IoT concepts applied in various devices prevalent in the market.
CO5	Envisage and compare real-world applications of IoT in different domains.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

**Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)**

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explain mobile applications and platforms from technical and business point of views.
CO2	Design simple mobile applications considering performance, usability, and security.
CO3	Use IDE tools to create mobile applications on Android platform.
CO4	Develop feature-rich mobile applications and integrate them with other useful services.
CO5	Implement various advanced UI and connectivity features in mobile applications.

#### Program Outcomes Relevant to the Course:

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

#### Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

### Detailed Syllabus

Module-#	Topics	Hours
<b>Module-1</b>	Introduction: Testing as an Engineering Activity, Role of Process in Software Quality, Testing as a Process, TMM Overview, Basic Definitions, Software Testing Principles - The Tester's Role, Origins of Defects, Defect Classes, The Defect Repository and Test Design Defect Examples, Developer/Tester Support for Developing a Defect Repository.	<b>8 Hours</b>
<b>Module-2</b>	Test Case Design: Testing Design Strategies, The Smarter Tester, Test-Case Design Strategies, Using Black-Box Approach to Test-Case Design, Random Testing, Equivalence Class Partitioning, Boundary Value Analysis, Other Black Box Test Design Approaches, Decision Tables, Requirements based Testing, Positive and Negative Testing, Compatibility Testing, User Documentation Testing, Domain Testing, Using the White Box Approach to Test Design, Test Adequacy Criteria, Coverage and Control Flow Graphs, Covering Code Logic, Paths Testing, Data Flow and White Box Test Design, Loop Testing, Mutation Testing, Evaluating Test Adequacy Criteria.	<b>11 Hours</b>
<b>Module-3</b>	Levels of Testing: The Need for Levels of Testing, Unit Test - Functions, Procedures, Classes, and Methods as Units, The Need for Preparation, Unit Test Planning, Designing the Unit Tests, The Class as a Testable Unit, The Test Harness, Running the Unit Tests and Recording Results; Integration Test - Goals, Integration Strategies for Procedures, Functions, and Classes, Designing Integration Tests, Integration Test Planning; System Test - Functional Testing, Performance Testing, Stress Testing, Configuration Testing, Security Testing, Recovery Testing, Regression Testing, Alpha, Beta, and Acceptance Tests.	<b>11 Hours</b>
<b>Module-4</b>	Test Management: People Issues in Testing, Organization structures for Testing Teams (Single Product and Multi-Product Companies), Testing Services Organization, Test Planning, Test Plan Components, Test Management, Test Process, Test Reporting, Software test automation, Skills needed for Automation, Scope of Automation, Design and Architecture for Automation, Requirements for a Test Tool, Challenges in Automation.	<b>6 Hours</b>

Cont'd...

Module-#	Topics	Hours
Module-5	Control, Monitoring, and Quality Assurance: Measurements and Milestones (Testing Status, Tester Productivity, Testing Costs, Errors, Faults & Failures, Test Effectiveness), Criteria for Test Completion, Types of Reviews, Review Metrics; Quality Control, Operational Profiles and Usage Models, Support for Quality Control, Statistical Testing, Software Reliability, Measurements for Software Reliability, Reliability, Quality Control, and Stop-Test Decisions, Applying Reliability Models, Internationalization Testing, Ad-hoc Testing, Testing OO-systems, Usability and Accessibility Testing.	6 Hours
<b>Total</b>		<b>42 Hours</b>

3. <https://www.softwaretestingmaterial.com/manual-testing-tutorial/>
4. <https://www.guru99.com/software-testing.html>

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Describe the relevance of testing as an engineering activity and realize the defects that are inherent to software applications.
CO2	Explain different testing strategies and select appropriate strategy for software testing.
CO3	Analyze different levels of testing in the perspective of product requirements and delivery.
CO4	Develop understanding of the test management procedures & create test plans for test automation.
CO5	Practice quality aspects, standards & models required to deliver software of assured quality.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO7	Function effectively both as a team leader and team member on multi disciplinary projects to demonstrate computing and management skills.
PO8	Communicate effectively and present technical information in oral and written reports.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.

Type	Code	Universal Human Values & Professional Ethics	L-T-P	Credits	Marks
MC	MCBS-T-MC-008		2-0-0	0	100

<b>Objectives</b>	The objective of this course is to enable the students to become aware of professional ethics and universal human values. It will instill moral and social values and loyalty to appreciate the rights of others. This course also provides the basis for deciding whether a particular action is morally good or bad.
<b>Pre-Requisites</b>	Elementary idea on Psychology, sensitivity to professionalism with respect to morality, judgment, and commitment are required.
<b>Teaching Scheme</b>	Regular classroom lectures with use of ICT as and when required, and planned interactive sessions.

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Explain human aspirations and understand the role of value education in engineering.
CO2	Attain living in harmony with self and other human beings with due self-regulation.
CO3	Sincerely evaluate their interactions with their family, friends, and society as a whole.
CO4	Experience living in harmony with nature and realize co-existence at all levels.
CO5	Act professionally with desired levels of ethics for a prosperous society.

**Program Outcomes Relevant to the Course:**

PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO7	Function effectively both as a team leader and team member on multi disciplinary projects to demonstrate computing and management skills.
PO8	Communicate effectively and present technical information in oral and written reports.
PO9	Ability to understand the impact of system solutions in a contemporary, global, economical, environmental, and societal context for sustainable development.

Type	Code	Software Engineering & UML Lab	L-T-P	Credits	Marks
PC	MCCS-P-PC-036		0-0-2	1	100

<b>Objectives</b>	The objective of this lab course is to apply software engineering principles for development of a software product starting with creation of SRS, function and object oriented design using UML and CASE tools, coding and testing.
<b>Pre-Requisites</b>	Basic analytical and logical ability with fundamental knowledge of procedural & object oriented programming is required. Topics taught in the theory class are essential to do the assignments.
<b>Teaching Scheme</b>	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of design, modelling, programming, and testing assignments.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to the complete objectives of the course & CASE tool. Assignment of case study projects to student groups.
2	Requirement Analysis of the assigned case study project.
3	Requirement Specification of the assigned case study project.
4	Function Oriented Design Phase: Creation of structure chart and Level-0 DFD.
5	Function Oriented Design Phase: Creation of DFD Level-1, 2 etc.
6	Object Oriented Design Phase: Creation of Use Case UML model.
7	Object Oriented Design Phase: Creation of Class UML diagram.
8	Object Oriented Design Phase: Creation of Activity and Sequence UML diagrams.
9	Object Oriented Design Phase: Creation of Collaboration, Statechart UML diagrams.
10	Object Oriented Design Phase: Creation of Component and Deployment UML diagrams.
11	Development of User Interface of the case study project.
12	Development and Unit testing of the case study project using programming language of choice (Java, C++, .NET etc.) - Part 1.
13	Development and Unit testing of the case study project using programming language of choice (Java, C++, .NET etc.) - Part 2.
14	Testing of the case study project (Integration, System test).

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Perform requirement analysis and prepare SRS document for a software product.
CO2	Design a software using FOD methodology and create the Structure Charts & DFDs.
CO3	Design a software using OOD methodology and create UML models using a CASE tool.
CO4	Develop the design of User Interfaces of a software using principles of a good design.
CO5	Develop a software using a high-level programming language or tool and test the product.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.

Type	Code	Web Application Development Lab	L-T-P	Credits	Marks
PC	MCCS-P-PC-037		0-0-4	2	100

<b>Objectives</b>	The objective of this course is to provide hands-on exposure and practice on building modern full stack web applications compatible with mobile devices and multiple screen resolutions.
<b>Pre-Requisites</b>	Knowledge of HTML, CSS, and Java Script along with concepts of PHP and MySQL taught in the theory class are required for the experiments.
<b>Teaching Scheme</b>	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

### Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

### Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Configuration of Development Environment and Server Configuration, XAMPP Tool.
2	Write a Simple Hello Program in PHP by Installing and Configuring XAMPP.
3	Study of Basic Building Blocks In PHP, Study of Control Structure & Loops In PHP.
4	Study of Array and Function In PHP.
5	Study of Form handling In PHP.
6	Study of Server Side Validation and Page Redirection In PHP.
7	Date and Time, Strings & Patterns.
8	Study of Cookies And Sessions In PHP.
9	OOP Concepts: Classes and objects, Constructor & Destructor, Inheritance.
10	Static methods and properties, Methods overloading, Abstract Class & Interface.
11	Study of MYSQL DDL, DML, DCL Commands.
12	Study of PHP Data Base Connectivity with MYSQL.
13	Study of MYSQL Data Base Operation.
14	Study of File Handling and Image Uploading in PHP.
15	JavaScript and the DOM Elements.
16	jQuery core features, using jQuery for interactive front-ends.
17	DOM manipulation, event handling
18	AJAX Call, How to handle an AJAX HTTP request to a server and the response.
19	Working with JSON.
20	Angular JS Basics and Implementation.
21	MVC Architecture and Implementation.
22	CodeIgniter Framework, Simple Crud Operation(CREATE, READ, UPDATE, DELETE, SEARCH).
23	API basics, Web Services, Creating REST Services.

Cont'd...

Experiment-#	Assignment/Experiment
24 - 28	Project Work: Each group of 3-4 students shall develop one complete web application as per the given assignment from start to finish using all the tools, technologies, and concepts taught and demonstrate the working web application.

**Text Books:**

- T1. S. Holzner, *The PHP Complete Reference*, 1<sup>st</sup> Edition, McGraw Hill Education, 2007.

6. <https://angular.io/guide/architecture>: Angular JS Documentation

**Course Outcomes:** *At the end of this course, the students will be able to:*

CO1	Understand web server set up and develop server side web application using PHP programming.
CO2	Apply Object-oriented concepts to develop reusable object libraries for complex web applications.
CO3	Design n-Tier database driven web applications with file processing, uploads and downloads.
CO4	Use AJAX programming techniques to develop rich internet applications.
CO5	Design and develop 3rd party framework-based scalable web applications for the real world.

**Program Outcomes Relevant to the Course:**

PO1	Apply knowledge of computing fundamentals, mathematics and domain knowledge appropriate for computing models from defined problems and requirements.
PO2	Design and develop applications to analyze and solve all computer science related problems.
PO3	Design applications for any desired needs with appropriate considerations for any specific need on societal and environmental aspects.
PO4	Analyze and review literature to invoke the research skills to design, interpret and make inferences from the resulting data.
PO5	Integrate and apply efficiently the contemporary IT tools to all computer applications.
PO6	Solve and work with a professional context pertaining to ethics, social, cultural and cyber regulations.
PO10	Appreciate the importance of goal setting and to recognize the need for life-long learning.
