Silicon Hills, Patia, Bhubaneswar - 751024

Effective From Academic Year 2020-21

Version: 1.30 (Build: 22-08-2022)

Approval History

ACM#	Date	Resolutions
AC-4	18/08/2020	The curriculum structure and detailed syllabus of 1st Year as proposed by the Boards of Studies is approved by the Academic Council.
AC-6	09/10/2021	The curriculum structure and detailed syllabus of 2nd Year as proposed by the Boards of Studies is approved by the Academic Council.
AC-8	13/08/2022	The curriculum structure and detailed syllabus of 3rd and 4th years as proposed by the Boards of Studies is approved by the Academic Council.

Program Outcomes (UG Engineering)

Graduates Attributes (GAs) form a set of individually assessable outcomes that are the components indicative of the graduate's potential to acquire competence to practice at the appropriate level. The Program Outcomes (POs) for UG Engineering programmes defined by NBA are:

PO1. **Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.

PO2. **Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. **Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. **Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. **Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6. **The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7. **Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. **Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. **Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. **Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

PSO1. Understand, analyze, and develop efficient software solutions to problems of varying complexity related to algorithms, system software, multimedia, web applications, data processing, and networking by applying fundamental concepts of computer science.

PSO2. Develop the skills in different computer languages, environments, tools & platforms to become a successful software professional or entrepreneur, develop a zest for innovation & higher studies, and contribute as a responsible citizen with effective communication, strong moral values and professional ethics.

PSO3. Adapt to the evolutionary changes in computing and embrace modern practices of software development to deliver user-friendly expert systems with for business success in the real world to meet the challenges of the future.
Program Educational Objectives (PEOs)

PEO1. *Fundamental Knowledge & Core Competence*: To apply fundamental knowledge of mathematics, science and engineering required for a successful computer professional and inculcate competent problem solving ability using efficient algorithms.

PEO2. *Proficiency for the Real World*: To foster the skills and creative ability to analyze, design, test and implement cost effective software applications and digital support systems for the changing needs of the real world.

PEO3. *Leadership & Social Responsibility*: To exhibit leadership capability with professional, ethical, interpersonal skills, social & economic commitment with a sense of responsibility towards public policies, community services, humanity and environment.

PEO4. *Life-long Learning*: To grow professionally through continued education & training of technical and management skills, pursue higher studies, and engage in life-long learning.

Course Types & Definitions

L	Lecture

Type	Code	Engineering Mathematics - I	L-T-P	Credits	Marks
BS	BTBS-T-BS-005		3-0-0	3	100

Objectives	The objective of this course is to familiarize the students with the knowledge and concepts of curve tracing, ordinary differential equations and applications, solution of system of linear equations using matrix methods, and Eigen vectors & Eigen values of matrices with applications.
Pre-Requisites	A good knowledge of trigonometry along with basics of differential and integral calculus of one variable and coordinate geometry of two and three dimensions.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the graphs of functions (curves) by knowing their characteristics like asymptotes and curvature.
CO2	Solve first order ordinary differential equations using various methods and apply them to physical problems.
CO3	Learn methodology to Solve second order ordinary differential equations and apply them to solve applied problems of electrical circuits.
CO4	Develop understanding of the concepts and methods of system of linear equations and apply them to solve a system.
CO5	Study and use the eigen values and eigen vectors of matrices, its properties and applications.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Type	Code	Engineering Chemistry	L-T-P	Credits	Marks
BS	BTBS-T-BS-002		3-0-0	3	100

Objectives	The purpose of this course is to emphasize the relevance of fundamentals and applications of chemical sciences in the field of engineering. The course attempts to address the principles of general chemistry and specific topics relevant to various engineering disciplines, so that the students can apply the knowledge in their respective areas of expertise.
Pre-Requisites	Basic knowledge on Normality, Molarity, mole concept, types of chemical reactions, and elementary idea on electrochemistry.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
	Introduction & Pre-requisites	**2 Hours**
Module-1	**Water Treatments**: Types of hardness-Units, Alkalinity of water and its significance, Softening methods and Numerical problems based on these methods; Membrane-based processes; Dissolved Oxygen, Problems with Boiler feed water and its treatments.	**8 Hours**
Module-2	**Corrosion Science**: Definition and scope of corrosion, Dry and wet corrosion; Direct chemical corrosion, Electrochemical corrosion and its mechanisms; Types of electrochemical corrosion, (differential aeration, galvanic, concentration cell); Typical Electrochemical corrosion like Pitting, Inter-granular, Soil, Waterline; Factors affecting corrosion, Protection of corrosion.	**7 Hours**
Module-3	**Instrumental Techniques**: Fundamentals of Spectroscopy; Principles and applications of molecular spectroscopy (such as UV-visible, IR and microwave).	**8 Hours**
Module-4	**Energy Sciences**: Types of fuels, Calorific value, Determination of Calorific value, Combustion and its calculations, Solid fuel: Coal analysis (Proximate and ultimate analysis), Elementary ideas on some gaseous fuels (Natural gas, Water gas, Producer gas, LPG) (Synthesis is excluded), Liquid fuels: IC engine fuel, concept of knocking, antiknocking, octane No and cetane No, Fractional Distillation of petroleum, Cracking of heavy oils; Battery technology – Fundamentals of primary & Secondary cells, Rechargeable batteries: Lead acid storage battery, Lithium ion battery, Fuel cells: principles, applications. Elementary idea on Photovoltaics.	**10 Hours**

Cont'd...

Module-#	Topics	Hours
Module-5	**Nanochemistry**: Nanomaterials, Classification of nanomaterials, Synthesis of noble metal nanoparticles (e.g., Gold /silver) and oxide based nanoparticles (e.g., cuprous oxide/zinc oxide) using green synthetic route, Stabilization of nanoparticles using capping agents, Elementary ideas on characterization of nanoparticles (X-ray Diffraction (XRD) and electronic spectroscopy), applications of nanomaterials.	**7 Hours**
	Total	**42 Hours**

6. https://alison.com - Spectroscopic Technique, Colorimetry

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Exploit the concept of hardness in softening hard water and determining the hardness of water.
CO2	Utilize the knowledge of electrochemistry and corrosion science in preventing engineering equipments from corrosion.
CO3	Apply the concept of molecular spectroscopy to analyze organic compounds using spectrophotometer.
CO4	Classify various fuels based on combustion parameters and understand the working principle of various batteries.
CO5	Acquire knowledge on synthesis & characterization of oxide based & noble metal nanoparticles through green synthetic route.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Cont'd. . .

PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Type	Code	Engineering Physics	L-T-P	Credits	Marks
BS	BTBS-T-BS-006		3-0-0	3	100

Objectives	The objective of this course is to obtain basic idea about various laws and understand different phenomena using principles of physics. This knowledge will be useful for the engineering students to understand the basic operating principle of instruments and techniques. The knowledge obtained can also be used to prepare various models and projects.
Pre-Requisites	Adequate knowledge and clear concepts in higher secondary physics like waves, oscillations, optics, electricity, magnetism, modern physics, etc.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
	Introduction & Pre-requisites	**2 Hours**
Module-1	**Wave Optics**: Concept of wave and wave equation, Superposition of waves (two beam and multiple beam) and interference, Huygen's principle, Interference by division of amplitude and division of wavefront, Theory of Newton's rings and its applications, Diffraction, Fraunhofer and Fresnel diffraction, Fraunhofer's diffraction from a single slit, Theory of plane diffraction grating, Determination of wavelength of light with a plane diffraction grating.	**10 Hours**
Module-2	**Vector Calculus**: Gradient of scalar field, Divergence and curl of vector field, Gauss divergence theorem and Stokes theorem (statement only). **Maxwell's Equations**: Gauss's law in electromagnetism, Faraday's law of electromagnetic induction, Ampere's circuital law, Displacement current, Maxwell's electromagnetic equations (integral and differential form). **Electromagnetic Waves**: Electromagnetic Wave (EM) equations - Free space, Dielectric and conducting medium, Transverse nature of EM wave, Electromagnetic wave in ionized medium, Electromagnetic energy density, Poynting's theorem and Poynting's vector.	**11 Hours**
Module-3	**Introduction to Quantum Mechanics**: Need of quantum mechanics, Particle nature of radiation - Black body radiation (no derivation), Photoelectric effect, Compton effect and pair production, Concept of de-Broglie's matter waves, Phase and group velocity, Heisenberg's Uncertainty principle with applications.	**6 Hours**
Module-4	**Schrödinger's wave equation with applications**: Concept of wave function ψ and interpretation of $|\psi|^2$, Schrödinger's time-dependent and time-independent equations, Probability current, Expectation values, Operators in quantum mechanics, Eigen functions and Eigen values, Applications of Schrödinger's equation- Particle in one dimensional rigid box, Potential barrier (emphasis on tunneling effect).	**6 Hours**

Cont'd. . .

Module-#	Topics	Hours
Module-5	**Laser**: Radiation-matter interaction, Absorption of light, Spontaneous and stimulated emission of light, Population inversion, Types of Laser-Solid State Laser (Ruby), Gas Laser (He-Ne), Properties and applications of Laser. **Optical Fiber**: Structure and Principle, Types of optical fiber, Numerical aperture, Applications of optical fiber.	**7 Hours**
	Total	**42 Hours**

5. https://nptel.ac.in/courses/113104012/

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyze wave properties of light like interference and diffraction and apply them in communications
CO2	Develop Maxwell's equations from basic laws of electromagnetism and apply them to understand the properties of electromagnetic waves.
CO3	Analyze wave-particle duality to understand radiation-matter interaction
CO4	Develop and apply Schrödinger's equations to diverse fields like bound particle, potential barrier etc.
CO5	Investigate the basic principle, properties, operations and applications of laser & optical fibre in different fields like communication, industry, medicine, research etc.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Cont'd…

PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

ES	BTEC-T-ES-001		2-0-0	2	100

Objectives	Know broadly the concepts and functionalities of the electronic devices, tools and instruments. Understand general specifications and deployability of the electronic devices, and assemblies. Develop confidence in handling and usage of electronic devices, tools and instruments in engineering applications.
Pre-Requisites	Knowledge on intrinsic and extrinsic Semiconductors, Physics and Chemistry of Higher Secondary Science level.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, and planned lectures to make the sessions interactive with problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Introduction to Electronics**: Signals, Frequency spectrum of signals, Analog and digital signals; **Diodes and Applications**: Semiconductor Diode - Ideal versus Practical, Resistance Levels, Diode Equivalent Circuits, Load Line Analysis; Diode as a Switch, Diode as a Rectifier, Half Wave and Full Wave Rectifiers, Breakdown Mechanisms, Zener Diode – Operation and Applications; Clipper and Clamper Circuits, Diode applications.	**7 Hours**
Module-2	**Bipolar Junction Transistor (BJT)**: Construction, Operation, Amplifying Action, Common Base, Common Emitter and Common Collector Configurations, Operating Point, Fixed and Voltage divider Biasing Configurations.	**6 Hours**
Module-3	**Field Effect Transistor (FET)**: Construction, Characteristics of Junction FET (JFET), Depletion and Enhancement type Metal Oxide Semiconductor FETs (MOSFET), Introduction to Complementary MOS (CMOS) circuits.	**5 Hours**
Module-4	**Operational Amplifiers and Applications**: Introduction to Op-Amp, Differential Amplifier Configurations, Basics of Op-Amp, Characteristics of Ideal Op-Amp, CMRR, PSRR, Slew Rate; Block Diagram and Pin Configuration of IC 741 Op-Amp, Applications of Op-Amp as: Summing Amplifier, Difference Amplifier, Differentiator, Integrator.	**5 Hours**
Module-5	**Feedback Amplifiers**: Principle, Advantages of Negative Feedback, Different Feedback Topologies. **Oscillators**: Classification, RC Phase Shift Oscillator.	**5 Hours**
	Total	**28 Hours**

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Become familiar with basic signals, diodes and their applications.
CO2	Investigate on the operation of different configurations of bipolar junction transistor. Analyze and design different biasing configurations with their applications.
CO3	Understand the construction, operation and characteristics of JFET and MOSFET. Analyze and design different biasing configurations with their applications.
CO4	Learn the construction and characteristics of Op-Amp and design circuits for various applications using Op-Amp.
CO5	Understand different types of feedback topologies and design various kinds of oscillators.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Type	Code	Basic Electrical Engineering	L-T-P	Credits	Marks
ES	BTEE-T-ES-001		2-0-0	2	100

Objectives	The objective of this course is to introduce the students to basic concepts of electricity and magnetism. The course will cover the basics of DC & AC networks, principle of operation of different electrical machines and measuring instruments. The course will train the students about the basic protection system and safety requirements and will give an overview of the electrical power systems.
Pre-Requisites	Basic knowledge of intermediate Physics, knowledge of basic Mathematics such as Calculus, Ordinary Differential Equations, Matrices etc.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Fundamentals of Electric Circuits: Charge & current, Voltage & current sources, Electrical circuit elements (R, L and C) and their characteristics, Kirchoff's current and voltage laws; Resistive Network Analysis: Node voltage & Mesh current analysis, Node voltage and mesh current analysis with controlled sources, Thevenin Theorem, Norton's Theorem, Principle of superposition, Maximum power transfer theorem; Formation of differential equation for RL & RC circuits; Concept of measurement and use of shunt and multipliers in ammeters and voltmeter.	**8 Hours**
Module-2	Representation of sinusoidal waveforms, Peak and rms values, Phasor representation, Real power, Reactive power, Apparent power, Power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel).	**6 Hours**
Module-3	Three phase balanced circuits, Voltage and current relations in star and delta connections. Brief introduction to generation, Transmission and Distribution of electrical power, Earthing & electrical safety.	**3 Hours**
Module-4	Electricity and magnetism, magnetic circuit and magnetic reluctance, Magnetic materials, BH characteristics, Ideal and practical transformer, e.m.f. equation of transformer, Equivalent circuit.	**4 Hours**
Module-5	Construction of D.C. machines, generator, Types of excitation system, working of D.C. motor, Classification of D.C. motor, Characteristics and speed control of dc motor; Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Torque-slip characteristic; Single-phase induction motor.	**7 Hours**
	Total	**28 Hours**

Text Books:

3. https://www.electrical4u.com/

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand and analyze basic electrical network with D.C. source.
CO2	Measure current, voltage and power of series RLC circuit excited by single-phase ac circuit.
CO3	Analyze three phase electrical systems and develop an understanding of the real power system.
CO4	Explain different concepts of magnetic fields and apply it to single phase transformer.
CO5	Describe the working principles of rotating electrical machines.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Type	Code	Computer Programming	L-T-P	Credits	Marks
ES	BTCS-T-ES-001		3-0-0	3	100

Objectives	The objective of this course is to introduce fundamentals of computer programming using the C programming language to the students. Starting with simple programs, the course will cover advanced topics like structures, pointers, file processing and pre-processor directives etc. and enable the students to write programs using C language for solving various engineering problems.
Pre-Requisites	Basic analytical and logical understanding including basic knowledge and usage of computers is required for this course. Prior experience with any other programming language will be beneficial.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction to computers and programming, operating system, compilers, interpreters, algorithm, flowchart, pseudocode etc., structure of C program, character set, identifier, keywords, constants, variables, data types, operators, expressions, statements, operator precedence and associativity, type conversion, input/output statements.	**8 Hours**
Module-2	Decision making and branching: if, if-else, nested if-else, else-if ladder and switch constructs, iterative execution of code using loops: while, for, do-while, nested loops, controlling loop behavior using jump statements (break, continue, goto) and exit statements.	**8 Hours**
Module-3	Arrays (1-D & 2-D), declaration and initialization of arrays, accessing array elements, operations on arrays - insertion, deletion, searching, sorting (selection sort), merging etc., character arrays and strings, initialization, input & output of strings, operations on strings, array of strings, string handling functions.	**9 Hours**
Module-4	User-defined functions, declaration and definition, parameter passing by value, functions returning values, idea on call by reference, passing arrays to functions, recursion, storage classes - auto, register, static, extern, Structures and Unions - definition, initialization, accessing members, array of structures, arrays within structures, structures and functions, self-referential structures.	**9 Hours**
Module-5	Understanding pointers, declaration, initialization, accessing variables using pointers, pointer expressions, scale factor, chain of pointers, using pointers with arrays, strings, functions and structures, dynamic memory management, pre-processor directives, command line arguments, basics of file handling.	**8 Hours**
	Total	**42 Hours**

5. http://www2.its.strath.ac.uk/courses/c/

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Formulate logic of a problem and write C programs using variables, expressions and input/output statements.
CO2	Develop structured C programs involving decision making using different control constructs.
CO3	Solve problems involving similar set of data items and convert them into C programs using arrays.
CO4	Design modular C programs and handle heterogeneous data items using structures & unions.
CO5	Write C applications using pointers, pre-processor directives, command line arguments and files.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Elements of Technical Communication**: General vs Technical Communication; Factors, participants, code, channels, message, feedback, Effective Business Communication; Importance of technical communication; Communication across cultures and common problems; Barriers to effective communication.	6 Hours
Module-2	**Sounds of English**: vowels, diphthongs, consonants and consonant clusters, problem sounds, phonemic transcription, syllabic division and stress, weak forms and rhythm, intonation.	5 Hours
Module-3	**Effective Business Communication**: Structure of a business organization; purpose of business organization; Technology in communication; use of bias-free language; channels of communication: upward, downward, diagonal, grapevine, open door communication; forms of technical communication: internal, external, formal, informal, oral, written. Language structures for day-to-day business communication: persuasion, negotiation, argumentation, making suggestions, assertive communication. Public speaking and presentation skills; content development; clarity of speech; emotions displayed by body language, personal space and zones, personal appearance and attitude to time.	9 Hours
Module-4	**Critical Reading**: sub-skills of reading; reading a feature article; reading an editorial; skimming through a short report; reading contemporary essays; reading prescribed English short stories.	11 Hours
Module-5	**Effective Business Writing**: constituents of effective writing: ; paragraph development: coherence, cohesion, progression of ideas, elements of style, clarity and precision, avoiding redundancy, circumlocution, jargons; Dealing with positive and negative messages; business writing: writing a memo; writing an e-mail, writing business letters, notice, writing different types of reports, writing a proposal.	11 Hours
	Total	42 Hours

  5. http://www.academiccourses.com/Courses/English/Business-English

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the elements of technical communication and communication across cultures.
CO2	Learn about aspects of English pronunciation and speak using a neutral accent.
CO3	Learn about the channels of business communication and business hierarchies in order to communicate effectively in a business set up.
CO4	Enhance their reading skills and be able to critically analyse texts of various kind.
CO5	Compose different types of business correspondences effectively.

Program Outcomes Relevant to the Course:

PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

4. https://www.careerpower.in/wp-content/uploads/2016/03/SSC-POLITY-CIVICS-CAPSULE-2016.pdf

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Provide basic information about Indian constitution and to analyze the legalities and related issues of drafting, adoption and enforcement of the Indian Constitution as a fundamental law of the nation and the provisions and privileges of Indian Citizenship.
CO2	Understand and judiciously use the fundamental rights and privileges envisaged in the constitution propagating social harmony and equality and respecting the rights and liberties of other people.
CO3	Analyze the major dimensions of Indian Political System and to contribute in protecting and preserving the sovereignty and integrity of India.
CO4	Know the successful functioning of democracy in India and to respect the Constitutional Institutions like Judiciary, Executive and Legislature.
CO5	Understand their obligations, responsibilities, privileges & rights, duties and the role that they have to play in deciding the Administrative Machinery of the country.

Program Outcomes Relevant to the Course:

PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Type	Code	Environmental Science & Engineering	L-T-P	Credits	Marks
MC	BTBS-T-MC-008		2-0-0	0	100

Objectives	This course serves as a general introduction to environmental science. From ecology and ecosystems, it acquaints the students to air & water quality and the impact of pollution on the environment due to industries and urbanization. Some remediation methods of minimizing the impact of pollutants through technology and legal systems are also addressed.
Pre-Requisites	Basic knowledge of physics, chemistry and biology is required for this course.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required and some sessions are planned for expert talk, seminar presentation by students.

3. http://nptel.ac.in/courses/120108005/: Municipal Solid Waste Management.
4. https://www.epa.gov/environmental-topics/: All Current Environmental Issues.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply concepts of ecology, eco systems, food chain and biogeochemical cycles for better understanding of functions of the environment.
CO2	Enhance knowledge of water and wastewater treatment for prevention of water pollution.
CO3	Understand the chemistry of pollutants in the atmosphere, soil and groundwater and understand principles of noise abatement.
CO4	Enhance knowledge of waste minimization technique to minimize and manage solid, hazardous wastes generated in different areas.
CO5	Understand environmental gradients, tolerance levels and environmental laws for prevention of environmental pollution.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Study and use the concepts of probability and random variables and applying them to evaluate probabilities of different events.
CO2	Know different discrete and Continuous probability models and apply those to solve probability problems of day to day activities.
CO3	Understand the applications of joint & sampling distributions.
CO4	Learn methodology to apply statistical testing and regression.
CO5	Study the concepts of Laplace Transform and to apply those for solving ODE.
CO6	Develop understanding of convolution and its application to integral equations.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Type	Code	Data Structures & Algorithms	L-T-P	Credits	Marks
ES	BTCS-T-ES-003		3-0-0	3	100

Objectives	To understand the abstract data types and to solve problems using data structures such as stacks, queues, linked lists, hash tables, binary trees, heaps, binary search trees, graphs and writing programs for these solutions.
Pre-Requisites	Knowledge of programming in C, specifically on structures, pointers, functions, recursion etc., are required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction to data structures, classification of data structures, algorithmic notation, complexity of algorithms, asymptotic notations, abstract data types. Arrays - introduction, representation of arrays (row and column major representation), basic operations on array (traverse, insert, delete, search), sparse matrix, representation of sparse matrix using triplet form, operations on sparse matrix (addition, transpose)	8 Hours
Module-2	ADT Stack - stack model, representation of stack using array, basic operations with analysis, applications- recursion, and conversion of infix to post fix expression, evaluation of postfix expression. ADT Queue - queue model, representation using array, basic operations with analysis, circular queue, introduction to priority queue and double ended queue.	8 Hours
Module-3	Linked list - introduction, types of linked list (single, double, circular), representation in memory, operations on linked list (traverse, search, insert, delete, sort, merge) in each type with analysis. Representation of polynomial and its operations (addition, multiplication), implementation of stack and queue using linked list.	9 Hours
Module-4	Tree - terminology, representation, binary tree - tree traversal algorithms with and without recursion. Binary search tree, Operations on Binary Search Tree with analysis, threaded binary tree, general tree, Height balanced tree (AVL tree), m-way search trees, B-trees. Graph - terminology, representation (adjacency matrix, incidence matrix, path matrix, linked representation), graph traversal (BFS, DFS), Dijkstra's single source shortest path algorithm, Warshall's all pair shortest path algorithm, topological sort.	9 Hours
Module-5	Sorting algorithms - bubble sort, selection sort, insertion sort, quick sort, merge sort, radix sort, heap sort. Hashing- hash functions and hashing techniques. collision resolution techniques- linear probing, quadratic probing, chaining.	8 Hours
	Total	42 Hours

4. https://www.geeksforgeeks.org/data-structures/

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyze performance of algorithms and implement various operations on array and sparse matrix.
CO2	Apply the basic operations of stacks and queues to solve real world problems.
CO3	Implement different types of linked list operations and their applications.
CO4	Represent data using trees & graphs to use them in various real life applications.
CO5	Analyze various sorting algorithms and explore different hashing techniques.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Engineering Chemistry Lab	L-T-P	Credits	Marks
BS	BTBS-P-BS-003		0-0-2	1	100

Objectives	Objectives of the subject is to educate the students with modern instrumental techniques & role of chemical analysis in various fields of engineering and science to examine and understand the effect of chemicals, compositions, impurities etc., on the properties of materials & the detrimental effects of polluting materials, and other unwanted impurities.
Pre-Requisites	Student should have the knowledge of balancing equations, principle of titrations, titrant, titrand, preparation of standard solutions, concentration of a solution, indicators used in a titration, principle of reduction-oxidation reactions, handling of instruments like pH meter & accurate measurement of sample by using electronic balance.
Teaching Scheme	Regular laboratory experiments conducted under supervision of the teacher. Demonstration will be given for each experiment.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
	At least 10 Experiments
1	Determination of Total hardness of water sample by EDTA method.
2	Determination of alkalinity of water.
3	Determination of available chlorine of bleaching powder/residual chlorine in tap water.
4	Determination of dissolved oxygen in supplied water.
5	Determination of saponification value of oil.
6	Determination of Acid value of oil.
7	Determination of Flash-point/fire point of a lubricant by Pensky-Martein's apparatus.
8	Determination of kinematic viscosity and Viscosity Index of a lubricant by Redwood viscometer.
9	Determination of concentration of a colour substance by Spectrophotometer.
10	Green synthesis of noble metal/oxide based nanoparticles.
11	Estimation of calcium in limestone powder.
12	Determination of chloride content of water.
13	Determination of the partition coefficient of a substance between two immiscible liquids.
14	Adsorption of acetic acid by charcoal.
15	Use of the capillary viscosimeters to the demonstrate of the isoelectric point as the pH of minimum viscosity for gelatin solutions and/or coagulation of the white part of egg.

Experiment-#	Assignment/Experiment
16	Proximate analysis of coal sample.
17	Determination of iodine value of oil/fat.

Text Books:

2. http://www.eco-web.com/edi/01759.html: Efficient Wastewater Treatment: The field for analytical and monitoring

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyse various water quality parameters such as alkalinity, hardness, dissolved oxygen & chloride content before it is put into use in various general, research, or industrial purposes.
CO2	Test the quality of an oil/fat by measuring its iodine or acid value by means of amount of unsaturation for various industrial use.
CO3	Verify quality of a lubricant by means of its viscocity or flash point which gives their nature & flammability for various industrial applications.
CO4	Analyse various fractions present in coal by proximate analysis for better use of carbon based compounds in industrial applications.
CO5	Study the importance of green synthesis by way of synthesising metal/ metal oxide based nano-particles for various material applications.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Cont'd...

	PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
	PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Type	Code	Engineering Physics Lab	L-T-P	Credits	Marks
BS	BTBS-P-BS-007		0-0-2	1	100

Objectives	The objective of this course is to develop the basic practical skill to design and measure different parameters of a physical quantity with proper error analysis which can help them in different field of engineering sciences. This practical knowledge will be useful for the engineering students to understand the basic operating principle of instruments. The knowledge obtained can also be used to prepare various models and projects.
Pre-Requisites	Adequate practical knowledge in Higher Secondary Physics including measuring instruments like screw gauge, slide caliper, spherometer etc. Knowledge of error analysis, graphical analysis etc. is also required.
Teaching Scheme	Regular laboratory experiments conducted under supervision of the teacher. Demonstration will be given for each experiment.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Determination of bandgap of semiconductor.
2	Determination of rigidity modulus by static method.
3	Determination of surface tension by capillary rise method.
4	Determination of acceleration due to gravity by bar / Kater's pendulum.
5	Determination of Plank's constant, verification of inverse square law by photocell.
6	Determination of wavelength of light by Newton's ring apparatus.
7	Determination of grating element of a diffraction grating.
8	Plotting of characteristic curve of a PN junction diode.
9	Plotting of characteristic curves of BJT.
10	Verification of laws of vibration of stretched string using sonometer.
11	Determination of wavelength of laser source by diffraction grating method.
12	Study of Hall effect.
13	Study of RC circuit.
14	Determination of Young's modulus by bending of beams.
15	Michelson Interferometer.
16	Determine of reduction factor of the given tangent galvanometer and horizontal component of Earth's magnetic field using tangent galvanometer.

4. https://arxiv.org/ftp/arxiv/papers/1510/1510.00032.pdf

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyze the wave aspect of light like interference and diffraction by conducting Newton's rings and Fraunhofer diffraction experiment.
CO2	Investigate some properties of matter like surface tension of water (capillary rise method) and coefficient of elasticity of steel, copper.
CO3	Verify and analyze the IV characteristics of junction diode and BJT, charging and discharging of capacitor in RC circuit.
CO4	Study and apply Hall effect to calculate the Hall coefficient, carrier concentrations; measure band gap of semiconductor and dielectric constant of dielectric material.
CO5	Understand and verify laws of transverse vibrations in a stretched string using sonometer.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Manufacturing Practices	L-T-P	Credits	Marks
ES	BTBS-P-ES-009		0-0-2	1	100

Objectives	The objective of this practical course is to provide the basic concepts about tools used in manufacturing practices. Detailed concepts are proposed in all the major trades of engineering interest.
Pre-Requisites	None
Teaching Scheme	Regular manufacturing jobs using tools under supervision of the teacher. Demonstration will be given for each experiment.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction of fitting practice and tools used in fitting jobs.
2	Exercise involving measuring, marking, cutting and filing practice.
3	Fitting of male and female mating parts.
4	Introduction of Lathe, exercise involving facing, straight turning, step turning, taper turning and thread cutting in Lathe machine.
5	Introduction of Milling and Shaping machines.
6	Preparing single step on a square block in Milling machine.
7	Preparing a key way on a square block in Shaping machine.
8	Introduction to basic principles of Arc and Gas welding.
9	Preparing lap joint by Gas welding and butt joint by Arc welding.
10	Sheet metal forming and joining operations.

Text Books:
   T1. P. Kannaiah and K. L. Narayana, ***Workshop Manual***, Sceitech Publishers, 2009.

   4. http://nptel.ac.in/courses/112107144/27 (Welding Processes)

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Study and practice use of hand tools and their operations in a fitting shop.
CO2	Design and model various basic prototypes in fitting, such as a Paper weight.
CO3	Design and model and use of various suitable tools form a chining processes like facing, straight turning, step turning, taper turning and thread cutting.

Cont'd…

CO4	Identify and use suitable tools for cutting of a mild steel work piece with the help of shaping and milling machines.
CO5	Design and model various basic prototypes in welding such as a Lap joint and Butt joint.
CO6	Design and model various basic prototypes using sheet metal forming and joining operations.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Engineering Graphics	L-T-P	Credits	Marks
ES	BTBS-P-ES-004		0-0-2	1	100

Objectives	To create awareness and emphasize the need for Engineering Graphics in all the branches of engineering, to follow basic drawing standards and conventions, to develop skills in three-dimensional visualization of engineering component, to solve specific geometrical problems in plane geometry involving lines, plane figures and special curves, to produce orthographic projection of engineering components working from pictorial drawings.
Pre-Requisites	Basic understanding of Geometry
Teaching Scheme	Regular laboratory classes using drawing tools under supervision of the teacher. Demonstration will be given for each drawing assignment using ICT as when required.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Principles of Engineering Graphics and their significance, usage of various drawing instruments, lettering, dimensioning principles.
2	Conics and Engineering Curves.
3	Orthographic Projections: Principles of orthographic projections - conventions, projections of points and lines.
4	Auxiliary projection Technique: Projection of Points and lines on Auxiliary Planes.
5	Projections of Planes: projections of planes in simple position & inclined to both planes.
6	Projection of Solids: projection of solids in simple position & inclined to both planes.
7	Principles of Isometric projection, isometric scale, isometric views, conventions, isometric views of lines & planes.
8	Isometric projections of solids, conversion of isometric views to orthographic views.
9	Development of surface and intersection of surfaces.
10	Sections and sectional views of simple and compound solids.
11	Introduction to AUTOCAD tools.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand and apply the concepts of lettering and dimensioning for drafting of machine drawings and building drawings and different Conics and Engineering Curves.
CO2	Recognize and be familiar with the Orthographic projections of points, lines.
CO3	Develop the concept of Orthographic projections of planes and solids.
CO4	Differentiate between isometric scale, isometric projections and views.
CO5	Have a broad overview of various sheet-metal work by the concept of development of surfaces and solids and Sectional Views of Simple and compound solids.
CO6	Draw various machine components and building structure drawing by using AutoCAD.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Experiment-#	Assignment/Experiment
1	Familiarization of electronic components and devices (Testing of semiconductor diodes and transistors using digital multi-meter).
2	Study and use of Oscilloscope, signal generator to view waveforms and measure amplitude and frequency of a given waveform.
3	V-I characteristics of semiconductor diode and determining its DC and AC resistances.
4	Implementation of clipper circuits, both positive clipper and negative clipper. Observe its output waveforms and compare them with theoretical analyzed results.
5	Study of half-wave and full-wave rectifier circuits without and with capacitor filter; recording of the waveforms and measurement of average and rms values of the rectified output.
6	Study of static characteristics of BJT in CE configuration.
7	DC biasing (Fixed bias) of the transistor in CE configuration and determination of its operating point.
8	Studies on Op-Amp applications (Inverting, non-inverting, integrating differentiating configurations) recording of the input-output waveforms.
9	Studies on logic gates (truth table verification of various gates, implementation of EXNOR and Half Adder using basic gates).
10	Design of 2:1 MUX and simple SR Latch.

2. http://iitg.vlab.co.in/?sub=59&brch=165

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Familiarize with various electronic components, measuring instruments, semiconductor diodes and their applications.
CO2	Acquire knowledge of characteristics of transistors and design, testing & implementation of transistors in various applications
CO3	Gain understanding of operational amplifiers (Op-Amp) and design & testing of electronic circuits for various applications using Op-Amp.
CO4	Develop understanding of digital logic gates and design & test digital circuits for various applications using logic gates.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

CO4	2	2	3										2	2	1

Type	Code	Basic Electrical Engineering Lab	L-T-P	Credits	Marks
ES	BTEE-P-ES-002		0-0-2	1	100

Objectives	Introduce the students to different electrical components and basic safety rules and regulations, give hands on practice about different measuring and protection equipment and their operations to understand and verify the basic concept of electrical & magnetic circuits and electric machines. The laboratory experiments shall go hand-in-hand with the topics taught in the theory class.
Pre-Requisites	Basic knowledge of different electrical components and different analysis techniques of electrical and magnetic circuits. Topics taught in Basic Electrical Engineering theory class are essential to conduct the experiments.
Teaching Scheme	Regular laboratory experiments conducted under supervision of the teacher. Demonstration will be given for each experiment.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Connection and measurement of power consumption of a fluorescent lamp.
2	Identification of different terminals of a DC compound machine.
3	Power and power factor measurement of 3-phase load by two wattmeter method.
4	Connection and testing of a single-phase energy meter.
5	Determination of open circuit characteristics (OCC) of DC shunt generator.
6	Calculation of power and power factor in series R-L-C circuit by AVW method.
7	Polarity test of a single-phase transformer.
8	Study of single-phase induction motors / fan motor.
9	Verify Thevenin's Theorem and Superposition Theorem.
10	Draw the B-H curve of a magnetic Specimen.
11	Starting of three-phase induction motor.
12	Regulation and efficiency of single phase transformer by direct loading.

Text Books:
 T1. A. Husain, *Fundamentals of Electrical Engineering*, 4th Edition, Dhanpat Rai & Co., 2016.
 T2. B. L. Thereja & A. K. Thereja, *A Textbook of Electrical Technology*, 23rd Edition, S. Chand & Co.

Online Resources:
 1. www.nptel.iitm.ac.in/electricalengineering
 2. www.electronics-tutorials.ws/dc-circuits

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Get an exposure to common electrical components and their ratings.
CO2	Develop electrical circuits using wires, measuring instruments, and protective devices of appropriate ratings.
CO3	Understand the usage of common electrical measuring instruments.
CO4	Understand the basic characteristics of transformers and electrical machines.
CO5	Verify different network theorems and magnetic properties.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Computer Programming Lab	L-T-P	Credits	Marks
ES	BTCS-P-ES-002		0-0-4	2	100

Objectives	To enable the students to analyse problems, formulate and implement solutions using the C programming language. The students will develop logical understanding for converting solutions of problems into C programs to be executed on a computer.
Pre-Requisites	Basic analytical and logical understanding including basic knowledge and usage of computers is required for this course.
Teaching Scheme	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to computers and Linux operating system.
2, 3	Get acquainted with the programming environment - Linux commands and VI-editor.
4	Editing, compiling, executing, and debugging of simple C programs.
5	Programs using operators and formatted input/output statements.
6	Decision making using `if`, `if-else`, `else-if` ladder, nested `if`.
7	Decision making using `switch-case` construct.
8, 9	Loop control structure (`while`, `do-while`, `for`) with jump statements.
10	Nested loops (printing various formats)
11, 12	1-D arrays including operation like searching, sorting, merging etc.
13	Handling 2-D arrays such as matrix operations.
14, 15	Programs on strings using various string handling functions (library functions)
16, 17	Designing user-defined functions.
18, 19	Programs on recursion.
20	Designing user defined functions for string manipulation.
21	Passing arrays (both 1D and 2D) to functions.
22, 23	Structure, array of structure, nested structure.
24	Dynamic memory management.
25	Self-referential structure (create and display operation of single linked list)
26, 27	File handling - reading from and writing to files.
28	Command-line argument, pre-processor directives.

4. https://www.tutorialspoint.com/compile_c_online.php

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Construct C programs for mathematical operations using control statements.
CO2	Develop C programs for Array and String manipulation.
CO3	Construct modular programs for better maintenance and reusability.
CO4	Manipulate heterogeneous data using structure and union.
CO5	Create and manipulate files using C programs.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Type	Code	Communicative & Technical English Lab	L-T-P	Credits	Marks
HS	BTBS-P-HS-011		0-0-2	1	100

Objectives	This laboratory course is designed to make students effective communicators and addressing issues like speaking inhibitions, accomplished by individual and team activities based on the four skills of language (LSRW).
Pre-Requisites	Basic knowledge of English grammar and the ability to speak, read and write using the English language.
Teaching Scheme	Regular laboratory classes with various tasks designed to facilitate communication through pair work, group/team work, individual and group presentations, discussions, role plays, listening to audios, watching videos, business writing and vocabulary enhancement.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Ice-breaking activities: dealing with inhibitions to speak (team activity)
2	Just a Minute (individual activity)
3	Role Play on channels of communication in the business world (team activity)
4	Speech activity 1: content development (individual activity)
5	Speech activity 2: for fluency, delivery and appropriate body language (individual activity)
6	Ear training: developing pronunciation skills (individual activity)
7	Listening comprehension: listening for overall and specific information (individual activity)
8	Oral presentations: preparing for public speeches (team activity)
9	Reading comprehension 1 (individual activity)
10	Reading comprehension 2 (individual activity)
11	Group presentation (team activity)
12	Writing Activity 1 (individual activity)
13	Writing Activity 2 (individual activity)

R3. B. K. Mitra, *Communication Skills for Engineers*, Oxford University Press, 2011.
R4. B. K. Das, *An Introduction to Professional English & Soft Skills*, Cambridge Univ. Press, 2009.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Speak in public and overcome their inhibitions to speak.
CO2	Communicate in simulated business contexts.
CO3	Develop English pronunciation skills through practice.
CO4	Work effectively as a member of a team or as a leader through group presentation assignments.
CO5	Critically analyse texts of various kind and compose effective business messages.

Program Outcomes Relevant to the Course:

PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Operations on arrays – insert, delete, merge.
2	Selection Sort, Bubble sort.
3	Linear Search and Binary search.
4	Representation of sparse matrix.
5, 6	Addition and transpose of sparse matrix.
7	Implementation of stack using array.
8	Conversion of infix to postfix expression.
9	Evaluation of postfix expression.
10	Operations of queue using array.
11	Operations of circular queue.
12, 13	Single linked list operations.
14, 15	Double linked list operations.
16	Circular linked list operations.
17	Stack using linked list.
18	Queue using linked list.
19	Polynomial addition using linked-list.
20, 21	Binary Search Tree operations.
22, 23	Graph traversal (BFS, DFS).
24	Warshall's shortest path algorithm.
25, 26	Implementation Insertion Sort and Quick Sort.
27, 28	Implementation of Merge Sort and Heap Sort.

Objectives	The objective of this course is to familiarize the CSE students with topics like calculus of functions of more than one variable, Fourier Series, Fourier Integral and Fourier Transform. Also the students will be introduced to stochastic processes to handle time-dependent probabilistic models.
Pre-Requisites	Knowledge of differential and integral calculus of one variable, coordinate geometry of two and three dimensions, matrix algebra and elementary probability theory is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the concepts of calculus of several variables and its application to maxima & minima.
CO2	Gain knowledge regarding singular value decomposition of a matrix and apply it to solve engineering problems.
CO3	Acquire skill of performing analysis of variance.
CO4	Understand the stochastic model and apply it to study real life problems.
CO5	Apply Fourier series and Fourier Transform of a given function appropriately.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Type	Code	Biology for Engineers	L-T-P	Credits	Marks
BS	BTBS-T-BS-014		3-0-0	3	100

Objectives	The objective of this course is to integrate the knowledge of traditional engineering and modern biology to solve problems encountered in living systems, allow engineers to analyze a problem from both an engineering and biological perspective, anticipate specific issues in working with living systems, and evaluate possible solutions.
Pre-Requisites	Basic knowledge of biology, chemistry, and physics is adequate.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required; sessions are planned to be interactive.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Introduction**: Importance of Biology for Engineers, Chemical foundations and basic chemistry of cell – Carbon compounds and cell as a unit of life; Physical and chemical principles involved in maintenance of life processes; Cell Structure & Functions (Prokaryotic and Eukaryotic cells), structure and functions of cellular components cell wall, plasma membrane, endoplasmic reticulum. Transport across the cell membrane, Cell signaling, nerve impulse conduction.	**8 Hours**
Module-2	**Metabolisms & Cell Division**: Exothermic and endothermic versus endergonic and exergoinc reactions; Concept of Keq and its relation to standard free energy, Spontaneity, ATP as an energy currency, break down of glucose (Glycolysis and Krebs cycle) and synthesis of glucose (Photosynthesis), Energy yielding and energy consuming reactions, Concept of Energy charge. Morphology of Chromosome, Cell theory, Cell cycle and phases; Mitosis and meiosis.	**8 Hours**
Module-3	**Genetics**: Laws of heredity (Mendelian and Non-Mendelian), Molecular Genetics: Structures of DNA and RNA, Mutations – Cause, types and effects on species, Bioinformatics - brief idea. **Origin of Life**: Haldane and Oparins concepts; Evolution: Modern concept of natural selection and speciation – Lamarkism, Darwinism/Neo-Darwinism.	**8 Hours**
Module-4	**Microbiology**: Concept of single celled organisms, Ecological aspects of single celled organisms, Concept of species and strains, Identification and classification of microorganisms, Microscopy, Sterilization and media compositions, Growth kinetics. Microbial diseases, epidemiology and public health. **Immunology**: Human immune mechanism – Types of immunities; Antigen/Antibody reactions – Applications in human health; Immunological disorders: Autoimmune diseases.	**9 Hours**

Cont'd...

Module-#	Topics	Hours
Module-5	**Biochemistry**: Carbohydrates, Lipids, Nucleic acids, Amino acids & Proteins – Classification based on function and structure; Protein synthesis – Components and regulatory mechanisms; Enzymes – An overview. **Biotechnology**: Basic concepts on Totipotency and Cell manipulation; Plant & Animal tissue culture – Methods and uses in agriculture, medicine and health. Biological indicators, bio-sensors, bio-chips, nanobiomolecules, bio-fuel.	9 Hours
	Total	42 Hours

5. https://www.genome.gov/genetics-glossary/Bioinformatics

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the structure, function & interaction of different types of cells and their components.
CO2	Describe the concepts of metabolism, energy cycle and cell theory.
CO3	Comprehend genetics, origin of life and organic evolution.
CO4	Apply the concepts of microbiology & immunology for diagnosis and treatment of diseases.
CO5	Recognize the biological processes like protein synthesis, action of enzymes and tissue culture.

Program Outcomes Relevant to the Course:

PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Cont'd…

PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Object oriented concepts: Object oriented systems development life cycle; Java Overview: Java Virtual Machine, Java buzz words, Data types, Operators, Control statements, Class fundamentals, Objects, Methods, Constructors, Overloading, Access modifiers.	8 Hours
Module-2	Inheritance: Basics of Inheritance, using super and final keyword, method overriding, Abstract classes, defining and importing packages, access protection, interfaces;	8 Hours
Module-3	Exception handling: Exception fundamentals, types, understanding different keywords (try, catch, finally, throw, throws), User defined exception handling; Threads: thread model, use of Thread class and Runnable interface, thread synchronization, multithreading, inter thread communication.	9 Hours
Module-4	Input/Output: Files, stream classes, reading console input; String manipulation: Basics of String handling, String class, StringBuilder, StringBuffer, StringTokenizer; Collection overview, Collection interfaces, Collection classes - ArrayList, LinkList, Set, Tree; Accessing a collection using iterator & for-each statement.	8 Hours
Module-5	Introduction to GUI Programming: working with windows, frames, graphics, color, and font. AWT Control fundamentals; Event handling: Delegation event model, event classes, sources, listeners, Adapter class, Swing overview.	9 Hours
	Total	**42 Hours**

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply object oriented principles to develop Java programs for real life applications.
CO2	Employ inheritance techniques for developing reusable software.
CO3	Develop robust & concurrent programs using exception handling and multi-threading.
CO4	Design programs using I/O operations, string classes, and collection framework.
CO5	Design GUI applications using AWT and Swing.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Module-#	Topics	Hours
Module-1	Number System and their Conversion, Arithmetic Operation using 1's and 2's compliments, Logic Gates, Universal Logic Gates, Realization using logic gates, Boolean Function Simplification and Combinational Logic Design: Review of Boolean Algebra and De Morgan's Theorem.	**9 Hours**
Module-2	SOP & POS forms, Canonical forms, Karnaugh maps up to 5 variables, Binary codes and Their application, Code Conversion; MSI devices like Half and Full Adders, Subtractors, Comparators, Multiplexers, De-Multiplexors, Encoder, Decoder.	**9 Hours**
Module-3	Sequential Logic Design: Flip flops - S-R, JK and Master-Slave JK FF, Edge triggered FF, Ripple and Synchronous counters, Mod-N Counters.	**9 Hours**
Module-4	Shift registers, Finite state machines, Mealy and Moore models; Logic Families and Semiconductor Memories: TTL NAND gate, Specifications, Noise margin, Propagation delay, Fan-in, Fan-out, Tristate TTL, ECL, CMOS families and their interfacing.	**8 Hours**
Module-5	VLSI Design flow: Design entry - Schematic, FSM & HDL, different modeling styles in VHDL, Data types and objects, Data flow, Behavioral and Structural Modeling, Synthesis and Simulation, VHDL constructs and codes for combinational and sequential circuits.	**7 Hours**
	Total	**42 Hours**

Text Books:

5. http://www.allaboutcircuits.com

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Become familiar with various number systems, codes and Boolean algebra.
CO2	Design and analyze combinational logic circuits.
CO3	Design & analyze various sequential logic circuits and be familiar with counter design.
CO4	Design, analyze and implement memory array and investigate performance of CMOS based logic circuits applicable to modern VLSI technology.
CO5	Simulate and synthesize various digital circuits using VHDL in industry standard tool such as Xilinx, Mentor Graphics etc.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Type	Code	Basics of Mechanical Engineering	L-T-P	Credits	Marks
ES	BTBS-T-ES-013		3-1-0	4	100

Objectives	The objectives of this course is to introduce basics of mechanical engineering, such as, statics, force equilibrium, free body diagrams, analysis of beams and associated stresses, laws of Thermodynamics and their applications in Power Plants and IC engines, and elements of fluid statics, which are essential and useful in every branch of engineering.
Pre-Requisites	Basic analytical and logical skills, a working knowledge of Physics and Mathematics including introductory calculus are required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Introduction to Engineering Mechanics**: Basic concepts, System of Forces, Coplanar Concurrent Forces, Resultant-Moment of Forces and its application; Couples, Moment (about point and about axis), Varignon's theorem, Resultant of concurrent and non-concurrent coplanar forces, Static equilibrium, Free body diagram, Reactions; Friction, Laws of Coulomb friction; Problems involving large and small contact surfaces (Ladder and Wedges); Square threaded screws (self-locking, screw jack); Belt friction; Rolling resistance.	**12 Hours**
Module-2	**Mechanical Properties of Materials**: Stress-Strain behaviour, Brittle and Ductile materials, selection of materials, Impact Test; **Analysis of Beams**: Centre of Gravity and Moment of Inertia of a plane and composite sections; Types of Beams, Loads and Reactions, Shear Forces, Bending Moments; Bending of Beams, Bending Stresses and Shear Stresses in beams, Failure of Beams (in brief).	**12 Hours**
Module-3	**Basics of Thermodynamics**: System, Control Volume, Surrounding, Boundaries, Macroscopic and Microscopic approaches, Thermodynamic Equilibrium, State, Property, Process, Point and Path functions, Cycle, Reversibility and Irreversibility; Properties of pure substances and phase change, Property diagrams, Use of Steam Tables; Brief discussion on Zeroth Law, First law and Second Law of Thermodynamics.	**12 Hours**
Module-4	**Applications of Thermodynamics**: Brief description and working principles of Air Compressors, Steam Power Plant, Refrigerators and Heat Pump, I.C. Engines (two-stroke and four-stroke, petrol and diesel engines).	**10 Hours**
Module-5	**Fluid Properties and Fluid Statics**: Properties of a Fluid; Pascal's Law, Simple and Differential manometers, Hydrostatic forces on submerged surfaces, Buoyancy, Bernoulli's theorem.	**10 Hours**
	Total	**56 Hours**

Text Books:

4. https://nptel.ac.in/courses/105/105/105105108/: Strength of Materials by Prof. S. Bhatacharya, IIT Kharagpur)

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain and analyze the principles of mechanics to solve problems in statics.
CO2	Articulate mechanics of deformable bodies and mechanical properties of materials.
CO3	Understand and solve problems in theormodynamics of pure substances.
CO4	Explain the design and operation of various devices based on theormodynamic principles.
CO5	Analyze the behavior of fluids and apply the concepts to solve problems in hydrostatics.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand and apply logic and logical inferences.
CO2	Gain knowledge regarding principle of inclusion & exclusion, generating function and recurrence relations.
CO3	Understand the concepts of relation, lattice and Boolean algebra.
CO4	Apply graph theory to real-life problems of computer science & engineering.
CO5	Define and differentiate the discrete structures like semigroup group, ring & field, and apply it to study group codes.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Understanding Java platform, compilation, and execution of a java program.
2	Overview of Eclipse IDE.
3	Use of class, use of control statements, data types, operators.
4	Implement class, object, constructor, methods, and other OOP features.
5	Inheritance Basics, more uses of constructor, method overriding, use of final.
6	Object class, practical use of abstract class.
7	Using Interface for achieving multiple inheritance, implementation of package.
8	Exception handing fundamentals, java built-in exceptions, Use of Scanner class for console input, use of own Exception subclass.
9	Java thread life cycle model and implementation approach, thread priority, implementation of synchronization.
10	I/O Basics, byte stream and character streams, reading and writing files, text processing using Java pre-defined stringBuilder and stringBuffer classes.
11	Basics of Java collection framework, implementation of collections in Java with different programs.
12	GUI basics and Window fundamentals, working with different Component, Container and Layout Managers.
13	Event handling for interactive GUI application.
14	Final lab test and viva voce.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply object oriented programming to develop Java programs for real-life applications.
CO2	Employ inheritance techniques for developing reusable software.
CO3	Develop robus and concurrent programs using exception handling and multi-threading.
CO4	Design programs using I/O operations, String classes and collection framework.
CO5	Design GUI applications using AWT and Swing.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Digital Electronics Lab	L-T-P	Credits	Marks
ES	BTEC-P-ES-004		0-0-2	1	100

Objectives	The objective of the course is to understand the internal structure of logic gates, its implementation using Boolean algebra, designing digital circuits like counters, registers and formulating digital systems using HDL.
Pre-Requisites	Knowledge of Basic Electronics is required.
Teaching Scheme	Regular laboratory experiments to be conducted under supervision of the faculty with use of ICT as and when required, with focus on implementation using hardware & software tools.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Digital Logic Gates: Investigate logic behavior of AND, OR, NAND, NOR, EX-OR,EX-NOR, Invert and Buffer gates, use of Universal NAND Gate.
2	Gate-level minimization: Two level and multilevel implementation of Boolean functions.
3	Combinational Circuits: design, assemble and test: adders and subtractors, Code Converters, gray code to binary and 7-segment display.
4	Design, implement and test a given design example with: (a) NAND Gates only, (b) NOR Gates only, and (c) Using minimum number of Gates.
5	Design with multiplexers and de-multiplexers.
6	Flip-Flop: assemble, test and investigate operation of SR, D & J-K flip-flops.
7	Shift Registers: Design and investigate the operation of all types of shift registers with parallel load.
8	Counters: Design, assemble and test various ripple and synchronous counters - decimal counter, Binary counter with parallel load.
9	Memory Unit: Investigate behaviour of RAM and its storage capacity – 16×4 RAM: testing, simulating and memory expansion.
10	Clock-pulse generator: design, implement and test.
11	Parallel adder and accumulator: design, implement and test.
12	Binary Multiplier: design and implement a circuit that multiplies 4-bit unsigned numbers to produce a 8-bit product.
13	Verilog/VHDL simulation and implementation of Experiments listed at #3 to #12.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyse the function of logic gates and implementation of Boolean functions.
CO2	Realize Universal gates and Implementation of minimized Boolean Expressions.
CO3	Design and analyze different combinational circuits.
CO4	Design various asynchronous and Synchronous Sequential Circuits.
CO5	Acquire knowledge about internal circuitry and logic behind any digital system.
CO6	Simulate various digital circuits using VHDL in industry standard tool such as Xilinx.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Type	Code	Yoga	L-T-P	Credits	Marks
MC	BTBS-P-MC-017		0-0-2	0	100

Objectives	To impart skills in students for control of mind, body and soul, enhance self-awareness, focus, and concentration, bring together physical and mental wellness, manage stress and anxiety, achieve perfect equilibrium and harmony of body & mind, and promote self-healing.
Pre-Requisites	There are no pre-requisites for this course.
Teaching Scheme	Regular practice classes conducted under supervision of the qualified Yoga teacher with necessary explanation and demonstration for each session.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to Yoga: Unison with the elements
2	*Prānāyāma*: performing breathing exercise
3	*Mudrā*: learning various types of *Mudrā*s and their benefits
4	*Bandha*: learning various types of *Bandha*s and their benefits
5	*Chakra*: learning various types of *Chakra*s and their benefits
6	*Chakshu Visrānt Āsana Samuha*; eye movement and exercises
7	Twisting set: standing twisting *āsana*
8	Side stretching set: standing Side stretching *āsana*
9	Forward bending set: standing Forward bending *āsana*
10	Backward bending set: standing Backward bending *aśana*
11	Balancing set: learning *Vrikshāsana*, *Ekpada Pranamāsana* and benefits
12	*Surya Namaskār*: surya namaskār mantra and poses
13	*Vajrāsana* set: sitting *āsana* sets
14	*Padmāsana* set: sitting *āsana* sets
15	Sleeping āsana and *Yoga Nidrā*: relaxation postures

Online Resources: *There are a number of online resources available for this course. The student is advised to search on the Internet and locate the required study materials as per advise of the teacher.*

P.T.O

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Promote positive health, get relief from stress and obtain balance of body & mind.
CO2	Acquire knowledge of integral approach of Yoga Therapy to common ailments.
CO3	Develop skills to adopt Yoga practices for health and general well-being.
CO4	Develop overall personality through control of body, mind and soul.
CO5	Enhance scientific attitude and team spirit for creative and constructive endeavors.

Program Outcomes Relevant to the Course:

PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Math-IV for Computer Sciences	L-T-P	Credits	Marks
BS	BTBS-T-BS-019		3-0-0	3	100

Objectives	The objective of this course is to provide a good exposure to linear and non-linear programming with several standard numerical methods, and the right kind of tools to solve large scale optimization problems in engineering.
Pre-Requisites	Knowledge of calculus of several variables, coordinate geometry of two and three dimensions and matrix algebra is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

2. https://nptel.ac.in/courses/111105100/

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Solve linear programming problems using graphical and simplex methods.
CO2	Understand the concept of duality in linear programming and apply the same to solve problems and to perform post optimal analysis.
CO3	Solve integer programming and quadratic programming problems.
CO4	Understand the concepts and conditions to solve a non-linear programming problem and able to solve unconstrained optimization problems.
CO5	Solve constrained optimization problems and understand the Karmakar's Algorithm.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Engineering Economics-its meaning and importance, Basic problems of an economy. The concept of time value of money; Concept of Interest. Time value of equivalence, Compound interest factors; Cash flow diagrams, Calculation of time value of equivalence, Present worth comparison, Future worth comparison, Pay-back period comparison.	**9 Hours**
Module-2	Equivalent annual worth comparison method, Situations for equivalent annual worth comparison, Rate of return, Internal rate of return, Incremental IRR analysis, Depreciation analysis, Methods of depreciation, Straight line method, Declining balance method, SOYD Method and MACRS method of depreciation; After tax comparison, Analysis of public Project, Cost-benefit analysis.	**9 Hours**
Module-3	Introduction to Micro Economics and Macro Economics, Theory of demand, Elasticity of demand, Price elasticity of demand, Measurement of elasticity of demand; Income elasticity and cross elasticity of demand, Demand forecasting; Law of supply, Elasticity of supply.	**8 Hours**
Module-4	Theory of production, Law of variable proportion, Laws of returns to scale, Cost Concepts, Total Costs, Fixed cost, Variable cost, Revenue concepts, Total revenue, Average revenue and marginal revenue, Market (Forms of market), Perfect Competition, Determination of price under perfect competition, Linear Break-even Analysis.	**8 Hours**
Module-5	Inflation, Meaning of inflation, Types, Causes, Measures to control inflation, Commercial Banks, Functions of Commercial Bank, Central bank, Functions of central Bank; National income, Definitions, Concepts of national Income, Methods of measuring National Income.	**8 Hours**
	Total	**42 Hours**

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the concepts of economics, engineering economics and its application in engineering.
CO2	Solve problems related to engineering economics and analyze decision alternatives in engineering projects.
CO3	Evaluate how changes in demand and supply affect market and production.
CO4	Assess the effects of changes in costs, selling price and units sold on the break-even point and target profit.
CO5	Analyze the macroeconomic environment of the business and its impact on society and enterprise.

Program Outcomes Relevant to the Course:

PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

4. https://www.tutorialspoint.com/design_and_analysis_of_algorithms/

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Design algorithms, analyze their running time for best, worst, and average-cases, and understand divide & conquer strategy considering quick sort and merge sort as examples.
CO2	Compare Heapsort with other comparison based sorting algorithms and develop dynamic programming algorithms.
CO3	Apply disjoint-set data structure and various algorithm design techniques such as greedy, backtracking, and branch-and-bound in real life problems.
CO4	Model a given engineering problem using graphs and design the corresponding algorithms to solve the problem.
CO5	Compare various pattern matching algorithms, understand NP-Completeness and the need of approximation & randomized algorithms.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Cont'd. . .

	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess
PO6	societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Module-#	Topics	Hours
Module-1	Introduction to database systems: Basic concepts and definitions, three-schema architecture, data independence, Concept of data models, types of data models, database languages, integrity, database users, Entity-Relationship model, Constraints & Keys, Extended Entity Relationship model, Relational model, Mapping of E-R model to relational schema, System structure of DBMS, Codd's 12 Rules.	**12 Hours**
Module-2	Query languages: Relational Algebra, basic operations, join operations, grouping & aggregation, Relational Calculus; Query processing and optimization: Evaluation of relational algebra expressions, Heuristic-based Query optimization.	**11 Hours**
Module-3	Database design: Functional dependencies, Armstrong axioms, Attribute closure, Equivalence sets of FD, Minimal cover; Normalization: Dependency & attribute preservation, lossless join; Normal Forms: 1NF, 2NF, 3NF, BCNF, Testing for lossless design, Multi-Valued Dependency (MVD), 4NF and 5NF.	**11 Hours**
Module-4	Transaction processing: Basic concepts, ACID Properties, Serializability, Concurrency Control Schemes – lock-based & timestamp-based protocols, Deadlock handling, deadlock prevention, detection and recovery; Database Recovery: types of database failures, Recovery techniques - log-based recovery, checkpoints, shadow paging.	**12 Hours**
Module-5	Storage strategies: Storage Architecture, File and Record Organization, Types of Indexes, B-Tree, B+ Tree, Index Files, Hashing, Data Dictionary; Distributed databases: Homogeneous vs. heterogeneous, Fragmentation & replication, Data transparency; Introduction to NoSQL: Properties, Columnar families, different NoSQL systems.	**10 Hours**
	Total	**56 Hours**

5. https://docs.oracle.com/database/121/SQLRF/toc.htm

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the significance & components of DBMS and create E-R model for real world applications.
CO2	Construct queries using relational algebra and understand query processing & optimization strategies.
CO3	Design relational databases and normalize the designs using different normalization techniques.
CO4	Resolve concurrency control issues and recover from database failures.
CO5	Visualize storage structures, indexing techniques and explore distributed & NoSQL databases.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

Type	Code	Computer Organization & Architecture	L-T-P	Credits	Marks
PC	BTCS-T-PC-007		3-0-0	3	100

Objectives	The objective of this course is to familiarize students about hardware design including logic design, basic structure and behaviour of the various functional modules of a modern digital computer and how they interact to provide the processing power to fulfil the needs of the user.
Pre-Requisites	Knowledge of basic digital electronics and computer fundamentals is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Basic structures of Computers: Computer Architecture vs. Computer Organization, Functional units, Operational concepts, Registers, Bus Structure, Performance Consideration, SPEC rating.	**9 Hours**
Module-2	Memory location and addresses, Big-endian and Little-endian representation, Instruction format, Instruction set Architecture, RISC vs. CISC, Addressing modes, Instruction Sequencing, Subroutines.	**8 Hours**
Module-3	Binary Arithmetic: Addition and subtraction of signed numbers, Design of fast adders, Multiplication of positive numbers, Signed operand multiplication, Fast multiplication, Integer division, Representation of floating point numbers.	**8 Hours**
Module-4	Memory System: Basic Concepts, Speed, Size and cost, Cache memory concepts, Cache memory mapping techniques, Performance consideration; Virtual memory concepts, Translation look-aside buffer, Replacement techniques, Secondary Storage.	**9 Hours**
Module-5	Basic Processing Units: Fundamental concepts, Execution cycle, Single-Bus and Multi-Bus Organization, Execution of complete instruction, Hardwired control, Micro programmed control, Accessing I/O devices.	**8 Hours**
	Total	**42 Hours**

Text Books:

5. https://homepage.cs.uiowa.edu/~ghosh/6012.html

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the architectural concepts of a digital computer, identify various functional units and describe their functionality.
CO2	Represent instructions in various formats and solve problems based on addressing modes.
CO3	Perform various binary arithmetic operations using different techniques and represent floating point numbers and perform various operations on them.
CO4	Explain the working principle of Main memory, Cache memory and Virtual memory organization and solve numerical problems based on memory management.
CO5	Describe the working mechanism of the components of processing unit and discuss the techniques to enhance the performance.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Linear & Binary Search.
2	Conversion of infix to postfix expression using Stack.
3	Binary Search Tree.
4	Sorting: Selection, Bubble and Insertion Sort.
5	Sorting: Quick Sort and Merge Sort.
6	Sorting: Heap Sort.
7	Priority Queue using min-Heap.
8	Matrix Chain Multiplication.
9	Longest Common Subsequence.
10	Naïve string matching algorithm.
11	Rabin-Karp string matching algorithm.
12	Knuth-Morris-Pratt String matching algorithm.
13	0-1 Knapsack problem.
14	Activity Selection problem.
15	Fractional Knapsack problem.
16	Huffman Code.
17	The n-Queen problem.
18, 19	Graph Traversal using BFS & DFS.
20	Kruskal's algorithm for Minimum Spanning Tree.
21	Prim's algorithm for Minimum Spanning Tree.
22	Bellman Ford's single source shortest path algorithm.
23	Dijkstra's single source shortest path algorithm.
24	Warshall's all pair shortest path algorithm.
25	Ford-Fulkerson algorithm.
26	Approximation algorithms for Travelling Salesman problem.
27, 28	Mini Project.

4. https://www.tutorialspoint.com/design_and_analysis_of_algorithms/

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Implement various searching and sorting algorithms and compare their execution time.
CO2	Understand and develop skill to solve problems using divide and conquer strategy.
CO3	Apply greedy, dynamic programming, backtracking and branch and bound paradigms to solve real life problems.
CO4	Formulate engineering problemsand solve them using graph algorithms.
CO5	Implement approximation algorithms to solve some of the NP-Complete problems.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Type	Code	Database Management Systems Lab	L-T-P	Credits	Marks
PC	BTCS-P-PC-010		0-0-4	2	100

Objectives	The objective of this course is to provide a formal foundation in database design, query, and data manipulation, and impart hand-on practice to the students to groom them into well-informed database application developers.
Pre-Requisites	Knowledge of theory of databases and programming skills is required.
Teaching Scheme	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to Oracle databases, simple queries for data retrieval.
2,3	Data retrieval based on conditions and sorting the query results.
4	Using single-row functions in SQL queries for data retrieval.
5	Applying grouping and aggregation functions.
6	Writing complex queries using sub-queries.
7	Create, alter, and manipulate design of tables.
8,9	Data manipulation using various DML statements.
10	Imposing various constraints on tables for maintaining data integrity.
11,12	Retrieve data from multiple tables using various types of Join operations.
13	Create, alter, and manage Views from single & multiple base tables.
14	Create and use other data base objects like sequence, indexes, and synonyms.
15	Controlling user access to database using DCL queries: Grant, Revoke.
16	Perform Set operations on tables: Union, Union All, Intersect, Minus.
17	Write SQL queries by using co-related sub-queries.
18	Introduction to PL/SQL, identifiers, literals, and keywords.
19	Write PL/SQL block by using conditional statements and expressions.
20	Using different types of Loops in a PL/SQL block.
21	Implement Exception Handling in a PL/SQL block.
22	Write PL/SQL block by using numeric, string, and other miscellaneous data types.
23	Introduction to data retrieval using Cursors by providing elementary idea.
24,25	Introduction to Stored procedures, Write PL/SQL block using procedures.
26	Develop functions with in/out parameters and using them in a PL/SQL block.
27, 28	Oracle Triggers – introduction, syntax, types and use.

3. https://www.javatpoint.com/oracle-tutorial

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Construct queries using SQL and retrieve data from a database using single/multi-row functions, and sub-queries.
CO2	Design relational tables imposing integrity constraints, operate on table using DDL/DML statements.
CO3	Create other database objects like views, sequences and indices.
CO4	Write PL/SQL programs including control structures, loops, and exception handing for real-world applications.
CO5	Implement the techniques using Procedures, Functions, and Parameters in PL/SQL.

Program Outcomes Relevant to the Course:

PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Module-#	Topics	Hours
Module-1	Introduction: Overview of Data Communication Networks, Protocols and standards, OSI Reference model, TCP/IP Protocol; Physical Layer: Analog Signals, Digital Signals, Data Rate Limits, Transmission Impairment; Digital Transmission: Digital-to-Digital & Analog-to- Digital conversion, Transmission Modes; Analog Transmission: Digital-to-Analog & Analog-to- Analog conversion; Multiplexing: FDM, TDM; Transmission Media: Guided Media, Unguided media; Switching: Circuit Switched, Datagram, and Virtual-Circuit Networks.	8 Hours
Module-2	Error Detection & Correction: Types of Errors, Error Detection mechanisms (Linear codes, Hamming codes, CRC, Checksum); Data Link Control and Protocols: Flow and Error Control, Stop-and-Wait ARQ, Go-Back-N ARQ, Selective Repeat ARQ; Introduction to HDLC and Point-to-Point Protocol; Multiple Access Mechanisms: Random Access - CSMA, CSMA/CD, CSMA/CA; Channelization: FDMA, TDMA, CDMA; Wired LANs (Ethernet): Traditional, Fast, and Gigabit Ethernet standards; Wireless LANs: IEEE802.11 Standards; Connecting Devices: Repeaters, Switches, Routers, Bridges, Modems, Hubs.	10 Hours
Module-3	Network Layer: IPV4 & IPV6 addresses, Subnets; Internet Protocol: Internetworking, IPV4 & IPV6 datagram format; Network Layer Protocols: ARP, RARP, ICMP working principles and datagram format; Routing: Unicast and Multicast Routing Protocols.	10 Hours
Module-4	Transport Layer: Process to Process Delivery, User Datagram Protocol (UDP) and Transmission Control Protocol (TCP), TCP and UDP segments and Flow Control.	8 Hours
Module-5	Domain Name System (DNS): Name Space, Domain Name Space and Distribution; Resolution: Recursive and Iterative DNS Queries; FTP, SMTP, HTTP.	6 Hours
	Total	**42 Hours**

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the basics of computer networks, topology, TCP/IP, and OSI reference models and various techniques and modes of transmission (Analog and Digital).
CO2	Compare various Data Link protocols, Error detecting mechanisms, Multi-Channel Access protocols and IEEE 802.xx standards for LAN.
CO3	Describe IPv4 & IPv6 addressing schemes, subnets, routing principles and algorithms used in the network layer.
CO4	Explain the protocols of Transport & Application layers and understand the working principles of Internet & the World Wide Web.
CO5	Explain the principles of DNS hierarchy and working principles of various Application layer protocols.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Cont'd...

PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction: Automata theory, Computability theory, Complexity theory, Mathematical notations & terminology, Alphabet, String, Languages & operations on strings; Finite Automata (Deterministic): Formal definition, Transition function, Extended transition function, Language of DFA, Design of DFA; Finite Automata (Non-deterministic): Formal definition, Language of NFA, Equivalence of DFA & NFA; NFA with Epsilon Transition: Eliminating ε-transitions from NFA, Conversion from Epsilon-NFA to DFA, Minimization of DFA.	**9 Hours**
Module-2	Moore Machines, Mealy Machines; Regular Expressions: Operators and their precedence, Building Regular expressions, DFA to Regular Expressions, Regular Expressions to DFA, Arden's theorem, Pumping Lemma for Regular languages, Closure properties of Regular languages.	**8 Hours**
Module-3	Introduction to Grammars: Definition, Derivation of string, Left and right linear grammars, Regular grammars; Context Free Grammars: Definition, Derivation of string, Language of CFG, Parse Tree, Ambiguity in grammar, Elimination of ambiguity, Normal forms of CFG: Chomsky and Greibach normal forms, Converting CFG to CNF & GNF, Cook, Younger, Kasami Algorithm, Closure Properties of context free languages.	**9 Hours**
Module-4	Push Down Automata: Basic Model, Components, Moves of a PDA, ID of a PDA, Design of a PDA, PDA to CFG and CFG to PDA conversion, Pumping Lemma for CFL; Turing Machines: Model, Components, ID of TM, Design of a TM, Variation of TM model, Recursively Enumerable Languages, Universal Turing Machine and undecidable problems.	**9 Hours**
Module-5	Church Turing hypothesis, Recursive and recursively enumerable sets, Chomsky's hierarchy of languages. Undecidability of Post correspondence problem, Linear Bounded Automata and Context Sensitive Languages; Primitive Recursive Functions: μ-Recursive functions, Ackermann's function, Turing computable functions, Cantor and Godel numbering; NP Completeness: P and NP, NP complete and NP Hard problems.	**7 Hours**
	Total	**42 Hours**

4. https://www.ics.uci.edu/~goodrich/teach/cs162/notes/: by Prof. M. T. Goodrich, University of California, Irvine, USA

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Develop and implement mathematical models with DFA, NFA for regular languages and grammar for real life applications.
CO2	Design and implement grammar and PDA for context free languages and demonstrate their properties.
CO3	Construct Turing machines for context sensitive and un-restricted languages.
CO4	Describe the Chomsky hierarchy of Formal Languages and Grammar.
CO5	Illustrate the relevance of the Church-Turing thesis, explain the concept of decidability & recursive enumerability, and classify a given language to the P, NP or NPC complexity classes.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Cont'd...

PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Introduction**: Overview, Evolution of operating system, Types of systems - Batch Processing, Multiprogramming, Time Sharing systems; Personal Computers, Parallel, Distributed, and Real-time Systems; Operating System Services, System components, System calls.	**6 Hours**
Module-2	**Process Management**: Process concepts, states, PCB, Process scheduling queues, queuing diagram, Types of schedulers, Operations on process; Inter-process communication - shared memory, message passing, Concept of buffering, Thread overview, Benefits of multi-threaded program, User and kernel threads, Multi-threading models, Issues with multi-threading - thread cancellation, thread pools, thread specific data; **CPU Scheduling**: Dispatcher, Scheduling - Criteria, Algorithms - FCFS, SJF, SRTF, RR, Priority, Multi-level Queue (MLQ), MLQ with Feedback.	**10 Hours**
Module-3	**Process Synchronization**: Background, Bounded-buffer – Shared-memory solution to Producer-consumer problem, Race condition, Critical section problem - Peterson's solution, Synchronization hardware: TestAndSet(), swap() instructions, Semaphores - Counting and binary semaphore, spinlocks, Classical problems of synchronization - Bounded-buffer problem, Readers-writers problem, Dining-philosophers problem, Monitors; **Deadlock**: System model, characterization, Resource-allocation graph, Methods for handling deadlocks, Deadlock prevention & avoidance, Banker's algorithm, Deadlock detection & recovery.	**10 Hours**
Module-4	**Memory Management**: Background, Logical & physical address space, Dynamic loading & dynamic linking, Swapping, Contiguous memory allocation, Dynamic storage allocation problem, Overlays, Paging, Segmentation; **Virtual Memory**: Background, Demand paging, Page fault, Basic page replacement policy, Page replacement algorithms - FIFO, OPT, LRU, LRU-Approximation, LFU, MFU, Thrashing, Working-set model.	**9 Hours**

Cont'd…

Module-#	Topics	Hours
Module-5	**Secondary Storage Structure**: Overview of mass storage structure, Disk structure, Disk scheduling - FCFS, SSTF, SCAN, C-SCAN, LOOK, C-LOOK, Swap-space management, RAID structure; File System: Concept, Access methods, Directory structure, Directory implementation, Allocation methods, Free space management, Access control list; I/O System: Polling, Interrupts, DMA; Case Studies: The LINUX System.	**7 Hours**
	Total	**42 Hours**

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explore principles behind various types of operating systems, system components, system calls, protection mechanisms and services.
CO2	Explain different schedulers, scheduling policies, and design new scheduling algorithms for real life problems.
CO3	Describe the significance of process synchronization through classical synchronization problems and deadlock handling mechanisms.
CO4	Describe the working principle of main memory, cache memory and virtual memory organization and solve memory related problems.
CO5	Articulate secondary storage management, and analyze the performance of various disk scheduling algorithms.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Cont'd...

PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Data Warehousing**: Introduction, Difference between operational databases and data warehouses, Three-tier architecture of Data Warehouse, Data Marts, Data staging area, Metadata.	**8 Hours**
Module-2	**Data Mining Basics**: Introduction, Application areas in data mining, KDD process; Getting to know your data: Data Objects and attributes types; Data Pre-processing: Why pre-process data? Data cleaning, Data integration, Data transformation and reduction.	**8 Hours**
Module-3	**Mining Frequent Patterns, Associations and Correlations**: Introduction, Market Basket Analysis, Frequent Item-set generation using Apriori algorithm, Rule generation; Alternative methods for generating frequent item-sets using FP-Growth algorithm, Evaluation of association patterns; From association analysis to correlation analysis.	**8 Hours**
Module-4	**Classification**: Introduction, Naïve Bayesian classifiers, Decision trees induction, Nearest neighbor classifiers; Neural Network: Multilayer perceptron model; Classification model evaluation techniques, Techniques to improve classification accuracy - Bagging, Boosting, Handling the class imbalance problem.	**10 Hours**
Module-5	**Clustering**: Overview, K-Means, K-Medoid, Agglomerative hierarchical clustering, DBSCAN, Cluster evaluation, Density-based clustering, Graph-based clustering, Scalable clustering algorithms.	**8 Hours**
	Total	**42 Hours**

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the requirement of a data warehouse and its components.
CO2	Explain the concepts of data mining and data pre-processing.
CO3	Generate frequent patterns, association rules, and correlations using different data mining algorithms.
CO4	Analyze different classification algorithms and apply the same to real life problems.
CO5	Apply different clustering algorithms for solving problems in various domains.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Introduction**: System software and Application software; Operating System: Origin, Evolution, Types, OS as Resource Manager & Service Provider; **Machine Structure**: Stored program concept, Micro flowchart of ADD instruction, Machine structure – 360 and 370; **Machine Language**: Long way, No looping, Address modification, Looping with example, Introduction to assembly language program, Example using literals.	9 Hours
Module-2	**Assemblers**: Design of two pass assembler – Statement of problem, Data structure, Format of data bases, Algorithm and flowchart of Pass-I and II. Equivalent machine code generation of a sample assembly program; **Table Processing**: Linear and Binary search, Bubble sort – 360 assembly code and illustration, Radix sort, Shell sort, Address calculation sort, Radix exchange sort and Random entry searching.	9 Hours
Module-3	**Macro Processor**: Macro instruction arguments, Conditional macro expansion, Macro calls within macro, Macro instruction defining macro, Two pass algorithm for macro processor, Creation of MDT and MNT for Macro calls within macro and Macro instruction defining macro; **Programming Languages**: Importance of High Level Languages, Features, Data Types, Data Structures, Storage Allocation & Scope Names, Accessing Flexibility, Functional Modularity, Asynchronous Operations.	8 Hours
Module-4	**Loaders**: Function of a loader, Compile–and–go, General loader scheme, Absolute loader, Subroutine linkages, Relocating loaders, Other loader schemes – Dynamic loading & linking, Overlays, Bootstrap loader; Design of Absolute loader & Direct linking loader.	8 Hours
Module-5	**Compilers**: Phases – Lexical analysis, Syntax analysis, Semantic analysis, Intermediate code generation, Machine dependent & independent optimization, Storage assignment, Code generation, Assembly & Output; **Formal Systems**: Uses, Formal specification, Formal grammars, Backus–Naur form, Canonic systems.	8 Hours
	Total	42 Hours

T2. S. Pal, *Systems Programming*, 1st Edition, Oxford University Press, 2012.

Reference Books:

R1. D. M. Dhamdhere, *Systems Programming and Operating Systems*, 2nd Revised Edition, Tata McGraw-Hill, 1999.

R2. A. R. John, *Systems Programming*, 1st Edition, Morgan Kaufmann, 2015.

Online Resources:

1. http://infolab.stanford.edu/pub/cstr/reports/cs/tr/66/52/CS-TR-66-52.pdf: Notes by Prof. A. C. Shaw

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the working principle of Von Neumann's stored program concept and operations of a General Machine structure.
CO2	Apply mnemonic form of programming to write assembly language programs and design a two-pass assembler.
CO3	Design a two-pass macro processor and visualize various system level features in PL/I.
CO4	Distinguish between various loading schemes and design absolute & direct linking loaders.
CO5	Explain the phases of compilation process and use of formal system & grammars.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Statistical Inference	L-T-P	Credits	Marks
PE	BTBS-T-PE-035		3-0-0	3	100

Objectives	The objective of this course is inculcate statistical thinking in designing data collection, derive insights from visualizing data, obtain supporting evidence for data-based decisions, and construct models for predicting & inferring future trends from statistical properties of data.
Pre-Requisites	Basic knowledge of probability & statistics is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Distributions Derived from the Normal Distribution: χ^2, t, and F distribution, Sample mean and sample variance; Survey Sampling: Population parameters, Sample random sampling - Expectation and variance of sample mean, Estimation of population variance, Normal approximation to the sampling distribution of $\bar{X}$, Estimation of a ratio.	**9 Hours**
Module-2	Estimation of Parameters & Fitting of Probability Distributions: Fitting the Poisson distribution, Parameter estimation (method of moments, maximum likelihood); Large sample theory for maximum likelihood estimates, Confidence intervals from maximum likelihood estimates, Bayesian approach to parameter estimation, Large sample normal approximation to the posterior, Computational aspects, Efficiency and the Camer-Rao lower bound, Negative binomial distribution, Sufficiency (a factorization theorem, Rao-Blackwell theorem).	**9 Hours**
Module-3	Testing Hypotheses & Assessing Goodness of Fit: The Neyman-Person paradigm - Specification of the significance level, Concept of a p-value, Null hypothesis, Uniformly most powerful tests, Duality of confidence intervals & hypothesis tests, Generalized likelihood ratio test, Likelihood ratio tests for the multinomial distribution, Probability plots, Tests for normality; Summarizing Data: Comparison of location estimates, Estimating variability of location estimates by bootstrap, Measures of dispersion, Boxplots, Exploring relationship with scatter plots.	**8 Hours**
Module-4	Comparing Two Samples: Comparing two independent samples – Methods based on the normal distribution, power, A nonparametric method - the Mann Whitney test, Bayesian approach, Comparing paired samples - Methods based on the normal distribution, Signed rank test, Case studies; Analysis of Variance: One-way layout - Normal theory, F test, Problem of multiple comparisons, Kruskal Wallis test.	**8 Hours**

Cont'd…

Module-#	Topics	Hours
Module-5	Analysis of Categorical Data: Fisher's exact test, χ^2 test of homogeneity & independence, matched pairs designs, odds ratios; Simple Linear Regression: Statistical properties of the estimated slope & intercept, Accessing the fit, Correlation & regression.	**8 Hours**
	Total	**42 Hours**

   3. https://nptel.ac.in/courses/111/105/111105124/: by Prof. S. Kumar, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe sampling distributions such as χ^2, t, and F distribution and use them in real life problems.
CO2	Estimate the parameters and fitting of probability distributions.
CO3	Apply methods of tests of hypothesis and goodness of fit.
CO4	Conduct a hypothesis test for a population proportion, make a decision using p-value and draw an appropriate conclusion.
CO5	Analyze categorical data and formulate linear regression model for the given data sets.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Personal Communication Systems (PCS): Wireless Technologies, Signals and Frequency; Cellular Systems: Structure, Cluster, Frequency Reuse and Splitting; Medium Access Control Mechanisms: SDMA, FDMA, TDMA and CDMA; GSM: Channels, Bands, Architecture, Mobility Management, Handover Detection & Management; GPRS: Architecture, GPRS Interfaces, GPRS Network Protocols.	8 Hours
Module-2	Wireless LAN (WLAN): IEEE 802.11 System Architecture, Ad-Hoc and Infrastructural Mode, MAC Frame Format; Bluetooth: Piconet, Scatternet, Protocol stack, Profile; WAP: Architecture, Components, Gateway and Protocol Stack, WML Script: Variables, Control Structure & Functions; IMT 2000 Standards: WCDMA and CDMA 2000.	9 Hours
Module-3	Mobile IP: Overview, Requirements, Entities, Agent Advertisement & Discovery, Registration, IP Packet Delivery, Tunneling and Encapsulation; IPv6, DHCP, ICMP; Routing in Ad-hoc Network: DSDV, AODV, DSR, ZRP; Mobile Transport Layer: I-TCP, Snooping TCP, M-TCP, T-TCP; WLL: Architecture, Components, Functionalities; Wireless Enterprise Networks.	9 Hours
Module-4	Satellite Communication Networks: Architecture, Handoffs, Mobile Satellite Systems (GEO, LEO, MEO, HEO), Satellite Constellation for Satellite Phone, Case Studies: Iridium, GLOBALSTAR, GLONASS; Virtual Private Network: Features, Remote Access, Site to Site VPN, Protocols; Security Challenges in Mobile Computing: Algorithms & Implementation.	8 Hours
Module-5	VoIP & Real Time Protocols: Multimedia Content Delivery in Mobile Network, Introduction to Mobile OS: Android, iOS; Introduction to Application Development for Mobile Platforms, Introduction to Android Studio and Java Programming Language, 3-tier Architecture for Mobile Computing, Design Considerations and Computing through Internet, Internet of Things, Future/Current Trends and Research: A Discussion.	8 Hours
	Total	42 Hours

3. https://nptel.ac.in/courses/106/106/106106167/: by Prof. D. K. Pillai, IIT Madras

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand different frequency bands & their communication domains and explain the GSM & GPRS functionalities in cellular network.
CO2	Explain the MAC layer protocols of WLAN, Ad hoc Network and different 2G and 3G standards.
CO3	Implement different protocols of Mobile network and transport layer and analyze their performance.
CO4	Comprehend the access and communication mechanisms of satellite network and VPN with cellular network.
CO5	Use appropriate wireless technologies in commercial and enterprise application developments.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Introduction**: Concept of real-time, Applications of real-time systems, Characteristics of real-time systems, Basic model of real-time system, Safety and reliability, Types of real-time tasks, Timing constraints, Modeling timing constraints.	8 Hours
Module-2	**Real-time Task Scheduling**: Basic concepts & terminologies, Types of real-time tasks & their characteristics, Classification of real-time task scheduling algorithms, Clock-driven scheduling, Hybrid scheduler, Event-driven scheduling, EDF scheduling, RMA; Scheduling Real-time Tasks in Multiprocessor and Distributed Systems: Dynamic allocation of tasks, Fault-tolerant scheduling of tasks, Clocks in distributed real-time systems, Centralized and distributed clock synchronization.	8 Hours
Module-3	**Resource Sharing & Dependencies**: Resource sharing among real-time tasks, Priority inversion, Priority Inversion Protocol (PIP), Highest Locker Protocol (HLP), Priority Ceiling Protocol (PCP), Different types of priority inversions under PCP, Important features of PCP, Issues in using resource sharing protocol, Handling task dependencies.	8 Hours
Module-4	**Real-time Operating Systems**: Time services, Features of a real-time operating system, Unix as a real-time operating system, Windows as a real-time operating system, POSIX, A survey on contemporary real-time operating systems, Benchmarking real-time systems.	8 Hours
Module-5	**Real-time Communication & Databases**: Basic concepts of real-time communication, Examples of applications requiring real-time communication, Soft & Hard real-time communication in a LAN, Basic concepts of real-time databases, Example applications of real-time databases, Characteristics of temporal data, Concurrency control in real-time databases, Commercial real-time databases.	8 Hours
	Total	**42 Hours**

2. https://nptel.ac.in/courses/106/105/106105172/: by Prof. R. Mall, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe characteristics & applications of real-time systems and their timing constraints.
CO2	Compare real-time task scheduling algorithms and analyze their schedulability criteria.
CO3	Explain the PIP, HLP & PCP protocols for sharing critical resources among real-time tasks.
CO4	Describe the principles, structure & operation of real-time operating systems and evaluate their suitability for real-time applications.
CO5	Understand the concepts of real-time communication and real-time databases.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Define the fundamentals and compare among various multi-processor architectures.
CO2	Explain the effectiveness of pipelining, classify and compute the speedup thereof.
CO3	Elaborate the hazards of pipeline architecture and various techniques to overcome them.
CO4	Describe cache optimization techniques, virtual memory concepts, and IO mechanisms.
CO5	Compare various industrial processors and explain basics of interconnection networks.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Introduction to Value Education**: Understanding Value Education, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Happiness and Prosperity – Current Scenario, Method to Fulfill the Basic Human Aspirations.	**6 Hours**
Module-2	**Harmony in the Human Being**: Understanding Human being as the Co-existence of the Self and the Body, Distinguishing between the Needs of the Self and the Body, The Body as an Instrument of the Self, Understanding Harmony in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health.	**6 Hours**
Module-3	**Harmony in the Family and Society**: Harmony in the Family – Family as the Basic Unit of Human Interaction, Values in Human-to-Human Relationship, 'Trust' – the Foundational Value in Human Relationship, 'Trust Deficit' - the concept and its dimensions and implications, 'Respect' as the Right Evaluation, Understanding Harmony in the Society, Vision for the Universal Human Order.	**6 Hours**
Module-4	**Harmony in the Nature or Existence**: The Four Orders of Nature, Understanding Harmony in the Nature, Interconnectedness, Self-regulation and Mutual Fulfillment among the Four Orders of Nature, Realizing Existence as Co-existence at all Levels, The Holistic Perception of Harmony in Existence.	**4 Hours**
Module-5	**Implications of the Holistic Understanding – A Look at Professional Ethics**: Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics, Holistic Technologies, Production Systems and Management Models-Typical Case Studies, Strategies for Transition towards Value-based Life and Profession.	**6 Hours**
	Total	**28 Hours**

3. http://www.storyofstuff.com
4. https://aktu.ac.in/hvpe/ResourceVideo.aspx

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Learn ethical concepts which will enable them to effectively resolve ethical issues in their personal and professional lives.
CO2	Be aware of their duties and responsibilities as professionals towards their organization and society.
CO3	Gather primary knowledge on engineering ethics and its objectives, different parameters of enquiry and engineering as an experiment in society.
CO4	Be conscious about risk and safety while finding a solution to an engineering problem.
CO5	Become attentive of the different global ethical issues.

Program Outcomes Relevant to the Course:

PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Soft Skills & Interpersonal Skills Lab	L-T-P	Credits	Marks
HS	BTBS-P-HS-021		0-0-4	2	100

Objectives	The objectives of this laboratory course is to practice language skills to become effective communicators by addressing issues like speaking inhibitions. The lab comprises of individual and team activities based on the four skills of language (LSRW).
Pre-Requisites	Basic knowledge of English grammar and the ability to speak, read, and write using the English language is required.
Teaching Scheme	Regular laboratory classes with various tasks designed to facilitate communication through pair and/or team activities with regular assessments, presentations, discussions, role play, audio-visual supplements, writing activities, business writing practices and vocabulary enhancement.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Process of Communication – Group activity.
2	Mock GD 1 – Effective Communication Skills.
3	Mock GD 2 – Subject clarity & group dynamics.
4	Mock GD 3 – Behaviour and Mannerisms.
5	GD: Test – Final Assessment.
6	Presentation Skills 1 (Group Activity: 4-5 students) – Language Fluency, Active Listening, Voice Modulation.
7	Presentation Skills 2 (Group Activity: 2-3 students) – Develop awareness of non-verbal attributes in presenters.
8	Presentation Skills 3 (in pairs) – Subject clarity and knowledge.
9	Presentation Skills: Test 1 – Individual activity.
10	Presentation Skills: Test 2 – Individual activity.
11	Verbal Ability 1 – Activity Sheets: Error identification and correction.
12	Verbal Ability 2 – Activity Sheets: synonyms, antonyms & homonyms, one word substitution, jumbled paragraphs & sentences.
13	Verbal Ability 3 – Activity Sheets: tenses, voice change.
14	Teamsmanship & Leadership Skills 1 – Video.
15	Teamsmanship & Leadership Skills 2 – Group activity.
16	Listening 1 – Correct Pronunciation & Stress.
17	Listening 2 – Video 1.
18	Listening 3 – Video 2.
19	Mock Interview 1 – CV and Cover Letter writing.

Experiment-#	Assignment/Experiment
20	Mock Interview 2 – Handling FAQ's and language fluency.
21	Mock Interview 3 – Assessment.
22	Mock Interview 4 – Assessment.
23	Writing Skill 1 – Essay writing.
24	Writing Skills 2 – Precis writing.
25	Assertiveness Skills – Activity and assessment.
26	Mind Mapping & SWOC – Assessment.
27	Enhancing Reading Skills 1 – Summarising & Note-making.
28	Reading Skills 2 – Comprehension passage.

2. https://www.usingenglish.com/
3. http://www.english-test.net/
4. https://www.ef.com/wwen/english-resources/

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Develop the skills to use English language for effective communication.
CO2	Utilise function of language in context of formality, appropriateness and sensitive issues.
CO3	Formulate and structure sentences using grammatically correct English.
CO4	Compose clear and effective business messages for specific purposes.
CO5	Build up a strong personality and develop skills for efficient public speaking.

Program Outcomes Relevant to the Course:

PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Cont'd. . .

PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1						3		1	2	3	2	3	1	3	3

CO3										3		3		2	2
CO4								1	1	3		3		3	3
CO5								1	2	3	1	3		3	3

Type	Code	Computer Networks Lab	L-T-P	Credits	Marks
PC	BTCS-P-PC-014		0-0-2	1	100

Objectives	The objective of this laboratory course is to implement various computer networking protocols in a high-level programming language and become acquainted with socket programming & GUI based Network Simulation tools like NetSim/NS3.
Pre-Requisites	Knowledge of C programming and concepts of computer networks taught in the theory class are required.
Teaching Scheme	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to Network Hardware and Software, Network Command like Netstat, Tracert, Ping, Pathping, Telnet, FTP.
2	Basic idea about IPv4 addressing and programming to find the IP address of a machine and Ethernet address.
3	To study various types of connector devices: Router, Hub, Switch, Bridge and verification of standard Network topologies: Star, Bus, Ring etc.
4	Introduction to Socket Programming: TCP and UDP sockets.
5	Socket Programming for Echo Client and Echo Server using TCP socket.
6	Socket Programming for Chatting between two Machines using TCP socket.
7	Socket Programming for Echo Client and Echo Server using UDP socket.
8	Socket Programming for communicating between two Machines using UDP socket.
9	Socket Programming for HTTP web page upload and download.
10	C Program to implement ARP/RARP Protocols.
11	Introduction to Network Simulator details (NetSim/NS3).
12	Simulation of different MAC Protocols: ALOHA, CSMA etc.
13	Simulation of Routing Protocol: Link state Routing.
14	Implementation of STOP and Wait Protocol.

Text Books:
- T1. R. Stevens and S. A Rago, *Advanced UNIX Programming*, 3rd Edition, Pearson Education, 2013.
- T2. L. V. Winkle, *Hands-On Network Programming with C*, 1st Edition, Packt Publishing, 2019.

Reference Books:
- R1. S. Walton, *LINUX Socket Programming*, 2nd Edition, SAMS Publication, 2007.
- R2. M. J. Donahoo and K. L. Calvert, *TCP/IP Sockets in C : Practical Guide for Programmers*, 2nd Edition, Morgan Kaufmann, 2009.

2. https://www.csd.uoc.gr/~hy556/material/tutorials/cs556-3rd-tutorial.pdf

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Experiment with transmission media, connector, Hubs, Switches and installation of NIC.
CO2	Implement client server applications with TCP/UDP Socket Programming in a standalone machine and over a network.
CO3	Apply HTTP over TCP/UDP connection with help of a Browser.
CO4	Simulate Datalink layer protocols using NetSim/NS3.
CO5	Develop applications to communicate over heterogeneous networks (Internet).

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Operating Systems Lab	L-T-P	Credits	Marks
PC	BTCS-P-PC-017		0-0-2	1	100

Objectives	The objective of this laboratory course is to learn operating system level programming and provide a hands-on exposure on implementation of various algorithms of the operating system.
Pre-Requisites	Knowledge of programming, data structures, and concepts of operating systems taught in the theory class are required.
Teaching Scheme	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to Linux OS and basic VI editor commands.
2	Linux File Structure and advance Linux commands like `grep`, `pipe`, `cut`, etc.
3	Introduction to UNIX Shell Script: Arithmetic Expressions, Relational and Conditional Operators.
4	UNIX Shell Script: Looping, Switch Cases.
5	Process Creation, process handing, process signaling through `fork()`, `exec()`.
6	CPU Scheduling (Non-Pre-emptive) FCFS, SJF, Priority.
7	CPU Scheduling (Pre-emptive) SRTF, RR, Priority-based preemptive.
8	Multi-Threaded application using POSIX threads.
9	Synchronization using Semaphore (Producer- Consumer, Reader-Writer).
10	Message passing : Pipe and Signals.
11	Inter-process communication using shared memory.
12	Deadlock implementation: Banker's Algorithm.
13	Implementing Page Replacement Algorithms.
14	Implementing Disk scheduling Algorithms.

Text Books:

T1. V. Mukhi, *The C Odyssey: UNIX*, 1st Edition, BPB Publications, 1992.

T2. A. Silberschatz, P. B. Galvin, and G. Gagne, *Operating System Concepts*, 8th Edition, Wiley, 2009.

Reference Books:

Online Resources:

1. https://www.technicalsymposium.com/sharelabcodings_os.html
2. https://www.cse.iitb.ac.in/~mythili/teaching/cs347_autumn2016/index.html

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Become conversant with various Linux commands and their specific uses.
CO2	Write, debug, and execute UNIX shell scripts for a given problem.
CO3	Implement various scheduling algorithms used at the operating system level.
CO4	Write programs for creation of child processes and communication among them.
CO5	Develop and implement deadlock avoidance and detection algorithms.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Overview of supervised learning, K-nearest neighbour, Multiple linear regression, Shrinkage methods (Ridge regression, Lasso regression), Logistic regression, Linear Discriminant Analysis, Feature selection.	**11 Hours**
Module-2	Bias, Variance, and model complexity, Bias-variance trade off, Bayesian approach and BIC, Cross-validation, Bootstrap methods, Performance of Classification algorithms (Confusion matrix, Precision, Recall and ROC Curve).	**11 Hours**
Module-3	Generative model for discrete data (Bayesian concept learning, Naïve Bayes classifier), SVM for classification, Reproducing Kernels, SVM for regression, Regression and classification trees, Random forest.	**11 Hours**
Module-4	Clustering (K-means, spectral clustering), Feature Extraction (Principal Component Analysis (PCA), kernel based PCA, Independent Component Analysis (IDA), Non-negative matrix factorization), Mixture of Gaussians, Expectation Maximization (EM) algorithm.	**12 Hours**
Module-5	Boosting methods-exponential loss and AdaBoost, Numerical Optimization via gradient boosting; Introduction to Reinforcement Learning, Elements of Reinforcement Learning, Single State Case: K-Armed Bandit, Model-Based Learning (Value Iteration, Policy Iteration).	**11 Hours**
	Total	**56 Hours**

2. https://nptel.ac.in/courses/106/105/106105152/: by Prof. S. Sarkar, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply the concepts of supervised machine learning and its functionalities.
CO2	Determine most appropriate model in a specific context using model selection techniques.
CO3	Perform classification using Bayes classifier, SVM, Decision Tree, and Random Forest.
CO4	Reduce dimensionality using feature selection and apply unsupervised machine learning for solving problems.
CO5	Apply the basic concepts of boosting methods and reinforcement learning to real life problems.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Overview of Compiler, Introduction to Lexical Analysis, Regular Language, Regular Expression (RE), Regular Definitions, Finite State Automata (DFA, NFA), RE to DFA conversion, Transition Diagram (TD), Lexical Analyzer (LA), LA Implementation from TD, LEX tool as LA Generator, LEX examples.	**9 Hours**
Module-2	Context Free Grammar (CFG), Ambiguity in CFG, Ambiguity removal, Elimination of Left Recursion, Elimination of non-determinism, Introduction to Parser, Top-Down Parsing, LL(1), Bottom-Up parsing, Construction of LR(0), SLR(1) parsing table, Construction of CLR(1), LALR(1) parsing table, Conflicts in LR, SLR, CLR, LALR parsing, LR parsing algorithm with example.	**10 Hours**
Module-3	Operator Precedence Parser, Error Reporting and Recovery, Syntax Directed Translation (SDT), S-attribute SDT, S-attribute SDT examples, YACC, Symbol Table.	**8 Hours**
Module-4	Intermediate Code Generation, Type of Intermediate Code, Intermediate code for various programming construct, Run-Time Environment, Run-Time Support, parameter passing methods, Activation Record, Variable storage and offset computation, Accessing Global Variable & allocation of Activation Record.	**8 Hours**
Module-5	Scope (Static, dynamic), Machine Code Generation, Different Schemes of Code Generation, Code Optimization, peephole optimization (Redundant Instruction Elimination, Flow of control optimization, Eliminating unreachable codes), Local Optimization, Control Flow Graph, DAG, Local common sub expression elimination (Value Numbering in Basic Blocks).	**8 Hours**
	Total	**42 Hours**

5. https://nptel.ac.in/courses/106/104/106104072/: by Prof. S. K. Aggarwal, IIT Kanpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Identify phases of a compiler, process of designing lexical analyzer, and apply LEX tool.
CO2	Construct parsing tables and implement parser using BISON tool.
CO3	Understand use of symbol table and design SDT as semantic analyzer for a language.
CO4	Generate intermediate code using lexical analyzer, parser and semantic analyzer.
CO5	Translate intermediate code to machine code, handle run-time environment, and apply code optimization techniques.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

4. https://nptel.ac.in/courses/106/105/106105218/: by Prof. D. P. Mohapatra, NIT Rourkela and Prof. R. Mall, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the SDLC phases and apply suitable life-cycle model in building of software products based on their characteristics.
CO2	Apply various requirement analysis tools for the requirements engineering process.
CO3	Describe the project management components and apply them for cost, time & effort estimation for software development projects.
CO4	Explain the design artifacts, testing strategies and implement them appropriately.
CO5	Achieve competitive advantage and enhanced quality by applying advanced concepts.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Artificial Intelligence: Introduction; Intelligent Agents: Agents and Environment, Good Behavior, Nature of Environments, Structure of Agents; Problem Solving: Solving Problems by Searching - Problem-Solving Agents, Example Problems, Searching for Solutions, Uninformed search strategies, Searching with Partial Information.	8 Hours
Module-2	Informed Search & Exploration: Informed (Heuristic) search strategies, Heuristic functions, Local Search Algorithms & Optimization Problems; Constraint Satisfaction Problems: Introduction, Backtracking search for CSPs, Local Search for CSPs; Adversarial Search: Games, Optimal Decisions in Games, Alpha-Beta Pruning; Knowledge & Reasoning: Knowledge-Based Agents, The Wumpus World.	10 Hours
Module-3	Knowledge and Reasoning: Logic, Propositional Logic, Reasoning Patterns in Propositional Logic; First-Order Logic: Syntax and Semantics of First-Order Logic, Using First-Order Logic, Knowledge Engineering in First-Order Logic; Inference in First-Order Logic: Propositional vs. First-Order Logic, Unification and Lifting, Forward Chaining, Backward Chaining, Resolution; Knowledge Representation: Ontological Engineering , Categories and Objects, Semantic Nets, Frames.	8 Hours
Module-4	Planning: The Planning Problem, Planning with State-Space Search, Partial-Order Planning, Planning Graphs; Uncertain Knowledge & Reasoning: Acting under Uncertainty, Bayes Rule and its use; Probabilistic Reasoning: Representing Knowledge in an Uncertain Domain, Semantics of Bayesian Networks.	8 Hours
Module-5	Learning: Learning from Observations, Forms of Learning, Inductive Learning, Learning Decision Trees; Statistical Learning, Instance Based Learning, Neural Networks; Reinforcement Learning: Passive and Active Reinforcement Learning; Expert Systems: Introduction, Architecture, Representations.	8 Hours
	Total	42 Hours

5. https://nptel.ac.in/courses/106/105/106105079/: by Prof. P. Dasgupta, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explore agents, environments, and search goal state using uninformed techniques in a state space.
CO2	Apply search techniques for game playing and solving constraint satisfaction problems.
CO3	Interpret logic, inference rules for decision making, and represent knowledge using semantic nets & frames.
CO4	Apply planning and reasoning to handle uncertainty in real life problems.
CO5	Use learning to solve complex real-life problems and design expert systems.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Cont'd...

	PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Wireless Sensor Networks	L-T-P	Credits	Marks
PE	BTCS-T-PE-050		3-0-0	3	100

Objectives	The objective of this course is to provide concepts & unique design challenges presented by wireless sensor networks (WSNs), and introduction to programming for WSNs at the system, network, and application levels.
Pre-Requisites	Knowledge of computer networks and wireless communication is required.
Teaching Scheme	Regular classroom lectures with use of ICT as required, sessions are planned to be interactive with focus on examples, applications, and latest research.

Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Introduction**: Overview of WSN & its technology, motivation & applications, Taxonomy of WSN technologies, Traditional layered stack, Cross-layer designs, Sensor network architecture.	**8 Hours**
Module-2	**Sensor Node Technology**: Overview, Hardware & software, Sensor taxonomy, Wireless network trends, Wireless transmission technology & systems, Radio technology primer, Available wireless technologies, Medium access control protocols for WSN, Fundamentals of MAC protocols, MAC protocols for WSNs, Sensor-MAC case study, IEEE 802.15.4 LR-WPANs Standard case study, MAC protocols analysis using Markov Chain.	**10 Hours**
Module-3	**Routing Protocols**: Data dissemination & gathering, Routing challenges, design issues, and strategies; Transport Control Protocols: Design issues, Resource aware routing, Data-centric routing, Geographic routing, Opportunistic routing.	**10 Hours**
Module-4	**WSN Middleware**: Principles, Architecture, Existing middleware, Network management - requirements, traditional models, design issues; Security issues of WSN: Possible attacks, Countermeasures, Static & dynamic key distribution.	**8 Hours**
Module-5	**WSN Platforms & Tools**: Sensor node Hardware, Berkeley Motes, Programming challenges, Node-level software platforms, Node-level simulators, State-centric programming; Applications of WSNs: Ultra wide band radio communication, Wireless fidelity systems, Future directions, Home automation, Smart metering applications.	**6 Hours**
	Total	**42 Hours**

R2. B. Krishnamachari, *Networking Wireless Sensors*, 1st Edition, Cambridge University Press, 2005.

Online Resources:

1. https://nptel.ac.in/courses/106/105/106105160/: by Prof. S. Misra, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe different types of wireless networks, their architecture and supporting protocols.
CO2	Explain the hardware & software of WSNs and MAC layer protocols to address media accessing.
CO3	Analyze the network & transport layer protocols to address issues like addressing, route optimization, handover, and reliability.
CO4	Explain architecture of WSN middleware, identify security issues and apply necessary countermeasures.
CO5	Apply various WSN platforms and tools to design real world applications.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction, Features of Distributed vs. Centralized Databases, Need of Distributed Databases, Components of DDBMSs, Types of Accesses, Review of Relational Model, Applications, Programs, and Transactions, Levels of Distribution Transparency, Reference Architecture for DDBs, Types of Data Fragmentation, An example DDB, Distribution Transparency for Read-Only & Update Applications, Distributed Database Access Primitives, Integrity Constraints in DDBs.	**8 Hours**
Module-2	Distributed Database Design, Framework, Objectives, and Approaches, Design of Database Fragmentation, Horizontal Fragmentation, Distributed Join Graphs, Vertical and Mixed Fragmentation, Allocation of Fragments, Equivalence Transformations For Queries, Transforming Global Queries into Fragment Queries, Algebra of Qualified Relations, Simplification of Fragmented Relations, Semi-join Programs, Distributed Grouping and Aggregate Functions, Parametric Queries.	**9 Hours**
Module-3	Framework for Query Optimization, Problems and Objectives, New model for Queries, Database Profiles, Assumptions and Importance of Distributed Query Optimization, Join Queries, Use of Semi-join Programs, Determination of Semi-join Programs in SDD-1, Determination of Semi-join Programs by AHY Algorithm, Use of Joins for Query Processing, The R* Approach, General Queries, Effect of Commuting Joins and Unions.	**9 Hours**
Module-4	Framework for Transaction Management, Properties and Goals, Supporting Atomicity of Distributed Transactions, Communication Failures, Recovery of Distributed Transactions, The 2-Phase Commitment Protocol, Lock-based Concurrency Control for Distributed Transactions, Deadlock Detection, Architectural Aspects of Distributed Transactions, Distributed Concurrency Control, Serializability in Distributed Databases, Distributed Deadlocks.	**8 Hours**

Cont'd…

Module-#	Topics	Hours
Module-5	Concurrency Control Based on Timestamps, Optimistic Methods for Distributed Concurrency Control, Reliability - Basic Concepts, Non-blocking Commitment Protocols, Reliability and Concurrency Control, Determining a Consistent View of the Network, Detection and Resolution of Inconsistency, Checkpoints And Cold Restart, Distributed Database Administration, Catalog Management, Authorization and Protection.	**8 Hours**
	Total	**42 Hours**

R3. D. Bell and J. Grimson, *Distributed Database Systems*, 1st Edition, Addison-Wesley, 1992.

Online Resources:

1. https://www.tutorialspoint.com/distributed_dbms

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the fundamentals, architecture and data fragmentation in distributed databases.
CO2	Design distributed databases with fragmentation & allocation of data, and explain query execution in a distributed environment.
CO3	Apply query optimization strategies for query execution in a distributed database system.
CO4	Visualize transaction processing and lock based concurrency control in distributed databases.
CO5	Describe timestamp-based concurrency control, reliability and administration of distributed databases.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the fundamental concepts and grammar based models for natural language processing.
CO2	Apply various word-level analysis techniques to convert natural languages into computer processible form.
CO3	Perform syntactic analysis of natural languages using various parsing techniques.
CO4	Derive unambiguous contextual meaning of natural languages by semantic analysis.
CO5	Appreciate applications of NLP in various human-computer interactive systems.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. http://web.mit.edu/6.897/www/readings.html: by Prof. H. Balakrishnan, MIT

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Define different types of computing paradigms and concepts of cloud technologies.
CO2	Explain the cloud computing architecture, models, and various virtualization techniques.
CO3	Understand the IaaS and PaaS implementations by leading vendors in the industry.
CO4	Appreciate the SaaS model implementations and importance of SLA in cloud environment.
CO5	Describe various aspects of security, privacy, and performance in cloud environments.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Cont'd...

PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction, Motivating Parallelism, Scope of Parallel Computing; Parallel Programming Platforms - Implicit parallelism, Limitation of Memory System Performance, Dichotomy of Parallel Computing Platforms, Physical Organization of Parallel Platforms, Communication Costs of Parallel Machines, Routing Mechanism for Interconnection Networks, Impact of Process-processor Mapping & Mapping Techniques.	8 Hours
Module-2	Principles of Parallel Algorithm Design - Preliminaries, Decomposition Techniques, Characteristics of Tasks & Interactions, Mapping Techniques for Load Balancing, Parallel Algorithm Models; Analytical Modeling of Parallel Programs - Sources of Overheads, Performance Metrics, Effect of Granularity on Performance.	9 Hours
Module-3	Scalability of Parallel Systems, Minimum Execution Time and Minimum Cost-optional Execution Time, Asymptotic Analysis of Parallel Programs; Basic Communication Operations - One-to-All Broadcast and All-to-One Reduction, All-to-All Broadcast and Reduction.	8 Hours
Module-4	All-Reduce and Prefix-Sum operations, Scatter and Gather, All-to-All Personalized Communication, Circular Shift, Improving the Speed of some Communication Operations, Programming using the Message Passing Paradigm - Introduction, Building Blocks.	8 Hours
Module-5	Message Passing Interface (MPI), Communication and Computation; Dense Matrix Algorithms - Matrix-Vector Multiplication, Matrix-Matrix Multiplication (basic algorithm), Solving a System of Linear Equations (Gaussian); Sorting - Issues in Sorting on Parallel Computers, Bubble Sort and its Variants (Odd-Even Transposition); Distributed Systems - Definition, Goal, Types, Architectures, Key Characteristics.	9 Hours
	Total	42 Hours

4. https://nptel.ac.in/courses/106/104/106104120/: by Prof. P. Gupta, IIT Kanpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Assess the performance, limitations, routing, and process-processor mapping techniques in parallel computing architectures.
CO2	Design parallel algorithms using decomposition, load balancing, and interaction overheads.
CO3	Investigate & analyze the basic communication operations in parallel models.
CO4	Explore the advance communication operations in parallel models.
CO5	Apply parallel programming models for solving complex problems using MPI.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO5	3	3	3	3									3	1	3

Type	Code	Microcontrollers & Embedded Systems	L-T-P	Credits	Marks
PE	BTCS-T-PE-024		3-0-0	3	100

Objectives	The objective of this course is to study the concepts & architecture of embedded systems including 8051 and ARM architecture, modeling embedded solutions, hardware-software co-design, hardware-software partitioning, and real-time operating systems.
Pre-Requisites	Knowledge of digital electronics, operating systems, computer organization and architecture is required.
Teaching Scheme	Regular classroom lectures with use of ICT as required, sessions are planned to be interactive with focus on examples, case-studies, and latest trends.

Evaluation Scheme

Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Processors and Controllers: CPU in Computing Systems, CPU Choice – Performance Metrics, Evolution of Microprocessor, Internal Microprocessor (8086 to Pentium), Comparison of Microprocessors and Microcontrollers, 8051 Microcontroller: Intel MCS-51 family features, 8051 Organization and Architecture, Registers, Addressing Modes, Instruction Set, Conditional Instructions,	10 Hours
Module-2	ARM Microcontrollers: Introduction to RISC Processor, ARM Pipeline, Instruction Set Architecture (ISA) – Registers, Data Processing Instructions, Data Transfer Instructions, Multiplications Instructions, Software Interrupt, Conditional Execution, Branch Instruction, Swap Instruction, THUMB Instructions.	8 Hours
Module-3	Embedded Systems: Embedded Systems vs. General Computing Systems, Classification of Embedded Systems, Different Modules of Embedded Systems, Devices, Device Drivers and Communication Interfaces – I/O Devices, Device Drivers, Serial Peripheral Interfaces, IIC, RS232C, RS422, RS485, Universal Serial Bus, USB Interface, USB Connector IrDA, CAN, Bluetooth, ISA, PCI, PCI-X and Advanced Busses.	8 Hours
Module-4	Modelling Techniques and Co-Design Issues: Software and Programming Concepts, Processor Selection for an Embedded System, State Chart, SDL, Petri-Nets and Unified Modeling Language (UML), Hardware Software Co-Design, Hardware and Software Partitioning – K-L Partitioning, Partitioning using Genetic Algorithm.	8 Hours
Module-5	Real Time Operating Systems (RTOS): Real-Time Task Scheduling, Important Concepts, Types of Real-Time Tasks and their Characteristics, Task Scheduling, Clock-Driven Scheduling, Hybrid Schedulers, Event-Driven Scheduling, Earliest Deadline First (EDF) Scheduling, Rate Monotonic Algorithm (RMA).	8 Hours
	Total	42 Hours

5. https://in.udacity.com/course/embedded-systems: by Prof. S. Pande and C. Gamboa, GeorgiaTech.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the concepts of embedded systems and select a processor for specific applications.
CO2	Describe RISC architecture with ARM and design embedded system around the same.
CO3	Analyze different serial and parallel communication protocols used in embedded systems.
CO4	Apply different techniques used for H/w and S/w modeling and partitioning methods.
CO5	Explore different types of real-time operating systems and their task scheduling mechanisms.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Internet & Web Technology Lab	L-T-P	Credits	Marks
PC	BTCS-P-PC-021		0-0-4	2	100

Objectives	The objective of this course is to provide hands-on exposure on development of static & dynamic web pages using client-side and server-side programming with database connectivity and deployment of web applications.
Pre-Requisites	Knowledge on programming, databases, internet and browsers is required.
Teaching Scheme	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Study of Web Browsers - Internet Explorer, Chrome, Mozilla Firefox; Browser Settings and options, security features, Cookies, temporary files etc.
2	Working of Application Layer Protocols - HTTP, FTP and SMTP.
3	HTML - Basics of HTML, text, image, MIME types, lists, tables.
4	Creating Web Forms and Use of HTTP GET & POST Methods.
5	Embedding audio and video, Image Map and Anchor Tag.
6	CSS - Introduction to Style Sheets.
7	Use of CSS2, CSS3, DIV and SPAN tags.
8, 9	JavaScript - Introduction to Client side Script, DOM (Document Object Model).
10, 11	JavaScript - Use of Different Elements of DOM, Form, Client Side Validation.
12	Introduction to PERL script and PERL Interpreter.
13	Text processing in PERL.
14	FORM handling in PERL.
15	Server Side Scripting - Introduction to Web Server Architecture (APACHE/IIS)
16	Server Side Scripting - Overview of PHP/JSP.
17	Server Side Scripting - Practice of PHP/JSP – Creating dynamic web pages.
18	XML - Introduction to Extensible Markup Language.
19	Database connection using MySQL.
20	FORM data handling and validation
21	Project Assignment (requirements, test scenarios & implementation criteria).
22-27	Development of assigned project using various web technologies taught.
28	Demonstration of working project, presentation, viva and evaluation.

3. https://www.tutorialspoint.com/html/html_javascript.htm: Javascript working examples and practice sets
4. https://perlmaven.com/perl-tutorial: Perl tutorial

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the working of Browsers and Internet protocols.
CO2	Develop web pages using HTML and CSS.
CO3	Develop interactive Web pages using Java script and XML.
CO4	Use Web server software and Server side scripts to develop & deploy websites.
CO5	Create and host fully fledged user interactive site, using Web tools and languages.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Software Engineering Lab	L-T-P	Credits	Marks
PC	BTCS-P-PC-027		0-0-2	1	100

Objectives	The objective of this laboratory course is to impart hands on exposure on different phases of end-to-end software development including technical writing, architectural design & documentation. The experiments shall go hand-in-hand with the topics taught in the theory class.
Pre-Requisites	Knowledge of object-oriented concepts and skill on MS office is required.
Teaching Scheme	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of analysis, designing, and documentation.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Problem Statement for a suggested system of relevance.
2	Requirement analysis for the suggested system.
3	Development of SRS for the suggested system.
4	Structured Analysis & Design using DFD, Structure Charts & Data Dictionary.
5	Object Oriented Analysis & Design – Use Case Diagram.
6	Develop the structural view for the system: Class diagram, Object diagram.
7	Construct the behavioral view diagram : State-chart diagram, Activity diagram.
8	Behavioral view diagram : Sequence.
9	Behavioral view diagram : Collaboration.
10	Develop test cases for various types of testing for a sample code of a suggested system.
11	Perform Estimation of effort/cost using FP/COCOMO estimation for chosen system.
12	Prepare time line chart/Gantt Chart/PERT Chart/Activity Diagram for the suggested system.

   3. https://nptel.ac.in/courses/106/101/106101163/: by Prof. M. D'souza, IIIT Bangalore
   4. https://nptel.ac.in/courses/106/105/106105218/: by Prof. D. P. Mohapatra, NIT Rourkela and Prof. R. Mall, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyze the characteristics of different applications and evaluate the suitability of life cycle models to such applications.
CO2	Develop the SRS document as per internationally accepted industrial standards.
CO3	Apply the different design artifacts and develop an architectural solution for different applications.
CO4	Describe the different testing strategies and develop test cases for testing of a software.
CO5	Use a project management tool for scheduling & estimation.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

- R3. E. Matthes, *Python Crash Course: A Hands on Project-based Introduction to Programming*, 2nd Edition, William Pollock, 2019.

Online Resources: *There are a number of online resources available for this course. The student is advised to search on the Internet and locate the required study materials as per advise of the teacher.*

Note: Additional course/reference materials, research publications, manuals/API, tools, libraries, or other software may be suggested by the teacher as per requirement of the skills needed for the project.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Identify different real-life problems from a given situation or environment.
CO2	Design and develop mathematical models for the existing problems.
CO3	Implement the proposed models by some programming languages or tools.
CO4	Test the model using test cases for practical implementation in real-life as a product.
CO5	Deploy the model and contribute it as a product to the society.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Cont'd…

PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

List of Electives

Code	Elective # and Subjects
Professional Elective - V	
BTCS-T-PE-055	Advanced Machine Learning
BTCS-T-PE-056	Internet of Things
BTCS-T-PE-057	Server Side Scripting
Professional Elective - VI	
BTCS-T-PE-058	Big Data Analytics
BTCS-T-PE-059	Cryptography & Network Security
BTCS-T-PE-061	Cyber Security & Forensics
Open Elective - I	
BTEE-T-OE-037	[EEE] Electrical Circuits & Safety
BTBS-T-OE-027	[BSH] Applied Linear Algebra
BTBS-T-OE-032	[BSH] Project Management
BTEC-T-OE-024	[ECE] Signal & Systems
BTEI-T-OE-003	[EIE] Transducers & Measurement Systems
Open Elective - II	
BTEE-T-OE-038	[EEE] Energy Conversion Devices
BTBS-T-OE-031	[BSH] Stochastic Processes
BTBS-T-OE-030	[BSH] Organizational Behaviour
BTEC-T-OE-039	[ECE] Communication Systems Engineering
BTEI-T-OE-020	[EIE] Biomedical Instrumentation & Signal Processing

Note: *Open Electives are choice-based courses offered by other departments as indicated within brackets.*

Type	Code	Fundamentals of Management	L-T-P	Credits	Marks
HS	BTBS-T-HS-022		3-0-0	3	100

Objectives	The objective of this course is to provide basic knowledge on management of business, finance, marketing, and human resources, which will help the students to grow from a team player to a good manager in an enterprise.
Pre-Requisites	General knowledge of any organization and its operations is sufficient.
Teaching Scheme	Regular classroom lectures with use of ICT as needed. Each session is planned to be interactive with real-life examples.

Evaluation Scheme

Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Concepts of Management**: Management as an art or science, the process of management, managerial skills, good managers are born, not made, management is concerned with ideas, things and people, inducing workers to put in their best, levels and types of management, evolution of management thought, managerial environment.	**8 Hours**
Module-2	**Functions of Management**: Planning and its features and process, types of plan, effective planning, Organizing and its process, formal and informal organization, directing and its elements, staffing and functions, controlling & its features and process, tools of controlling.	**6 Hours**
Module-3	**Marketing Function**: Modern concepts of marketing, marketing vs. selling, functional classification of marketing, functions of marketing management, marketing process; Marketing Mix: product and types of product, product life cycle, development of a new product, price, factors affecting price, pricing strategies; Distribution channel: role and functions, selection of a distribution channel, promotion and types of promotion, developing an advertising campaign, promotional strategies.	**12 Hours**
Module-4	**Financial Function**: Scope and objectives, financial functions, sources of finance, project appraisal, tools of financial decisions making, overview of working capital.	**6 Hours**
Module-5	**HRM Function**: Human Resource Management, Human Resource Development, importance of HRM, overview of job Analysis, job description, job specification, labour turnover; Manpower planning, recruitment, selection, induction, training and development, placement, wage and salary administration, performance appraisal, grievance handling, welfare aspects.	**10 Hours**
	Total	**42 Hours**

Text Books:

T1. S. A. Sherlekar and V. S. Sherlekar, *Modern Business Organization & Management*, 4th Edition, Himalaya Publishing House, 2018.

2. https://iedunote.com/marketing-concept
3. https://www.tutorsonnet.com/functions-of-distribution-channel-homework-help.php
4. https://www.managementstudyhq.com/financial-function-types-importance-objectives.html

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the basic concepts of management and organization.
CO2	Explain fundamental management functions such as planning, directing, organizing, leading and controlling.
CO3	Adopt marketing policy by applying modern concept of marketing and select appropriate distribution channels.
CO4	Apply knowledge of financial functions in management for decision making.
CO5	Utilize the concepts of HRM functions to manage & develop human resources in an organization.

Program Outcomes Relevant to the Course:

PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction, Overview of computer graphics, Basic terminologies in graphics, Lookup table, Plotters, Printers, Digitizers, Light pens, Active & passive graphics devices, Raster & random scan displays, CRT basics, Video basics.	**8 Hours**
Module-2	Output Primitives - Points, Lines, Circles and Ellipses as primitives, Scan conversion algorithms for primitives, Fill area primitives including scan-line polygon filling, Inside-outside test, Boundary and flood-fill, Character generation, Line attributes, Area-fill attributes, Character attributers.	**10 Hours**
Module-3	2D and 3D Transformations (translation, rotation, scaling), Matrix representation, Homogeneous coordinates, Composite transformations, Reflection and shearing, Viewing pipeline and coordinates system, Window-to-viewport transformation, Clipping including point clipping, Line clipping (Cohen-Sutherland, Liang-Bersky), Polygon clipping.	**8 Hours**
Module-4	3D display methods, Polygon surfaces, Tables, Equations, Meshes, Curved lines and surfaces, Quadric surfaces, Spline representation, Cubic spline interpolation methods, Bezier curves and surfaces, B-spline curves and surfaces, General (parallel and perspective) projection transformations, Fractal geometry.	**8 Hours**
Module-5	Visible surface detection concepts, Back-face detection, Depth buffer method, Illumination, Light sources, Illumination methods (ambient, diffuse reflection, specular reflection), Color models - properties of light, XYZ, RGB, YIQ and CMY color models, Animation (introduction only).	**8 Hours**
	Total	**42 Hours**

Text Books:

T1. D. Hearn and P. Baker, *Computer Graphics – C Version*, 2nd Edition, Pearson Education, 2004.

2. https://nptel.ac.in/courses/106/106/106106090/: by Prof. S. Das, IIT Madras

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the basics of computer graphics and its applications.
CO2	Explore the standard line, circle, and area filling algorithms.
CO3	Design various transformation models in 2D and 3D spaces.
CO4	Apply the design principles to generate curves and mapping using projection.
CO5	Explore hidden lines and surface detection techniques with color models.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply fuzzy logic and fuzzy inference system concept to design automation system for real life problems.
CO2	Apply the concepts of genetic algorithm to solve engineering optimization problems.
CO3	Train the Artificial Neural Network for decision making in real life environment.
CO4	Use the concepts of Artificial Neural Network (ANN) to solve real life engineering and societal problems.
CO5	Envisage the need of hybridization, and to develop hybrid models for solving complex problems.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Regularization for Deep Learning: Parameter Norm Penalties, Norm Penalities as Constrained Optimization, Regularization and Under-Constrained Problems, Dataset Augmentation, Noise Robustness, Early Stopping, Parameter Tying and Parameter Sharing, Sparse Representations, Bagging and Other Ensemble Methods, Dropout, Adversarial Training. Optimization for Training Deep Models : Challenges in Neural Network Optimization, Basic Algorithms, Parameter Initialization Strategies, Algorithms with Adaptive Learning Rates, Approximate Second-order Methods, Optimization Strategies.	**10 Hours**
Module-2	Convolutional Networks: The Convolution Operation, Motivation, Pooling, convolution and Pooling as an infinitely strong prior, Variants of the Basic Convolution Function, Structured Outputs, Data Types, Efficient convolution Algorithms, Random or Unsupervised Features, The Neuroscientific Basis for Convolutional Networks, Convolutional Networks and the History of Deep Learning, Applications.	**6 Hours**
Module-3	Sequence Modeling : Recurrent and Recursive Nets : Unfolding Computational Graphs, Recurrent Neural Networks, Bidirectional RNNs, Encoder-Decoder Sequence-to-Sequence Architecture, Deep recurrent Networks, Recursive Neural Networks, The Challenge of Long-Term Dependencies, Echo State Networks, Leaky Units and Other Strategies for Multiple Time Scales, The Long Short-Term Memory and Other Gated RNNs, Optimization for Long-Term Dependencies, Applications.	**6 Hours**
Module-4	Graphical models-DIRECTED Graphical models (Bayesian networks), Hidden Markov Models and Markov Random fields. EM algorithm and Gaussian mixture model.	**10 Hours**
Module-5	Review of SVM: Multiclass SVM, Multiple kernels, kernels for texts, strings, and graphs, Applications; Dimensionality Reduction: Orthogonal feature selection, LLE, Auto Encoder, Matrix factorization and applications (image processing, Collaborative filtering).	**10 Hours**
	Total	**42 Hours**

2. http://cs229.stanford.edu/syllabus.html: Notes by Stanford University

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply knowledge of regularization to improve the performance of deep learning methods.
CO2	Understand the basics of CNN and apply this to solve related problems.
CO3	Understand the basics of RNN and apply this to solve related problems.
CO4	Study the representation, learning and inference of some graphical models.
CO5	Understand an advanced SVM technique and some algorithms for feature selection and extraction.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain and explore the basic building blocks of IoT and different design levels.
CO2	Design and develop IoT solutions for different application domains.
CO3	Explore the evolution of IoT from other existing technologies and protocols.
CO4	Design IoT systems using IP-based architecture and different protocol stacks.
CO5	Develop IoT solutions using appropriate H/w components & protocols, and explore recent trends in IoT and Industry 4.0.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Server Side Scripting	L-T-P	Credits	Marks
PE	BTCS-T-PE-057		3-0-0	3	100

Objectives	The objective of this course is to introduce various server side scripting technologies and their application for developing & hosting small to large scale web-based applications.
Pre-Requisites	Knowledge of internet technologies and client side scripting languages like HTML, CSS, and Java Script is required.
Teaching Scheme	Regular classroom lectures with use of ICT as required, sessions are planned to be interactive with focus on solution design, programming, and examples.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Web Applications: Architecture, Client-side script vs. Server-side script, Web servers (Apache Tomcat/Web Logic); Hosting Web Applications: Cloud hosting, AWS server creation, Hosting in AWS server (with example), Other Hosting Environments; JQuery and Bootstrap 4: JQuery Syntax, Effects, HTML, Ajax, Bootstrap 4 Containers, Grid System, Dropdown, Navigation Bar, Forms.	**9 Hours**
Module-2	Java Server Pages (JSP): Advantages of JSP over Servlet, Lifecycle of a JSP page, JSP API, Scriptlet tag, Implicit Objects, Directives, Exception Handling, Action Tags, Expression Language (EL); Advanced Features of JSP: Session Tracking, MVC, JSTL (JSP Standard Tag Library), Custom Tags, CRUD operations; JSP Sample Code: Pagination, Registration Form, File Uploading.	**9 Hours**
Module-3	Introduction to PHP: Syntax, Variables, Data Types, Loops, Functions, Arrays, Global Variables (Superglobals); PHP Form Handling: Form Validation, Required Fields, Validate E-mail and URL; PHP & XML: XML Parsers, SimpleXML Parser, Get Node/Attribute Values, Expat Parser, XML DOM Parser.	**8 Hours**
Module-4	Advanced PHP: Include Files, File Handling, Cookies, Sessions, JSON, Filters; PHP MySQL: Connecting to MySQL, Insert Data, Prepared Statements, Select Data, Delete Data, Update Data; PHP AJAX: Introduction, AJAX and MySQL, AJAX and XML, Live Search, Poll.	**8 Hours**
Module-5	Node.js: Introduction, Module, HTTP Module, File System Module, URL Module, NPM, Events, Sending an Email; Node.js & MySQL: Create database, Create tables, Insert, Select, Update, Delete, Limit, Join; Node.js & MangoDB: Create Collection, Insert, Find, Query, Sort, Update, Delete, Drop Collection, Limit, Join.	**8 Hours**
	Total	**42 Hours**

3. https://www.tutorialspoint.com/php/index.htm
4. https://www.w3schools.com/nodejs/default.asp

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Distinguish between client side and server side scripts concepts and will have the knowledge to create server side web page development.
CO2	Design web applications using JSP technology.
CO3	Design and develop small to complex web applications using PHP and MySQL as back-end database.
CO4	Develop complete mail application using PHP and Node.js scripts.
CO5	Create large scale application using Node.js, Ajax and MongoDB concepts.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

4. http://lintool.github.com/MapReduceAlgorithms/index.html

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the concepts of Big Data and Map Reduce techniques.
CO2	Apply different tools and techniques used for finding similar items.
CO3	Demonstrate application of algorithms for analysis of streaming data and link analysis.
CO4	Apply different techniques for recommendation systems & collaborative filtering and compare different clustering techniques to apply them for large dataset.
CO5	Explore the concepts of Hadoop, MapReduce, Spark and apply them to implement big data algorithms.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

4. https://www.cryptool.org/en/

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Identify security objectives & threats and enumerate necessary services & mechanisms for effective counter measures.
CO2	Explain the mathematical foundation of cryptography through modular arithmetic, linear algebra, number theory, factorization and discrete logarithm.
CO3	Analyze the performance of traditional symmetric key cryptography techniques and modern symmetric key ciphers like DES and AES.
CO4	Apply public key cryptography and Hash algorithms in encryption, data integrity, authentication, digital signature, and key exchange.
CO5	Apply cryptography techniques in various network security protocols like SSL, TLS, PGP, S/MIME, and IPsec.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

4. http://web.mit.edu/6.897/www/readings.html: by Prof. H. Balakrishnan, MIT

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain different security threats & vulnerabilities and apply relevant tools for scanning.
CO2	Visualize the extent of attacks in cyber space, cyber crime laws, cyber criminal behaviour.
CO3	Explore various types of cyber attacks and their implications in various domains.
CO4	Collect cyber crime evidences and analyze & validate the same for forensic & legal use.
CO5	Perform systematic forensic investigations on cyber crimes and present evidences in the court.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Cont'd…

PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

2. https://nptel.ac.in/courses/108/104/108104139/: by Prof. A. Sharma, IIT Kanpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Comprehend the basic concepts of DC circuits and apply different laws for circuit analysis.
CO2	Explain the basic concepts of AC circuits and different electromagnetic principle.
CO3	Troubleshoot and justify requirements of earthing for electrical safety.
CO4	Analyze the safety policies & audit and take necessary steps during accidents.
CO5	Understand electrical maintenance and Indian electricity act related to safety.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Geometry of Linear Equations, Gauss Elimination, Concept of Matrices with Applications, Vector Spaces and Subspaces, Echelon Form, Solution in Matrix Method, L.I, Basis & Dimension, Four Fundamental Subspaces, Linear Transformations.	**9 Hours**
Module-2	Orthogonal Vectors & Subspaces, Cosines & Projections onto Lines, Projections & Least Squares, Orthogonal Bases and Gram-Schmidt Process.	**8 Hours**
Module-3	Introduction & Properties of Determinants, Formulas for Determinant, Applications of Determinants, Introduction to Eigenvalues & Eigenvectors, Diagonalization of Matrix, Difference Equations, Complex Matrices, Similarity Transformations.	**8 Hours**
Module-4	Maxima, Minima & Saddle Points, Tests for Positive Definiteness, Singular Value Decomposition, Minimum Principles.	**8 Hours**
Module-5	Introduction to Computations with Matrices, Matrix Norm & Condition Number, Computation of Eigenvalues, Iterative Methods.	**9 Hours**
	Total	**42 Hours**

Text Books:

T1. G. Strang, *Linear Algebra and Its Applications*, 4th Edition, Cengage Learning, 2007.

Reference Books:

R1. G. Strang, *Introduction to Linear Algebra*, 3rd Edition, Wellesley-Cambridge, 2003.

Online Resources:

1. https://nptel.ac.in/courses/111/106/111106051/: by Dr. K. C. Sivakumar, IIT Madras
2. https://nptel.ac.in/courses/111/102/111102011/: by Dr. R. K. Sharma and Dr. W. Shukla, IIT Delhi
3. https://nptel.ac.in/courses/111/108/111108066/: by Prof. V. Rao, IISc Bangalore
4. https://nptel.ac.in/courses/111/107/111107106/: by Prof. P. N. Agrawal and Prof. D. N. Pandey, IIT Roorkee

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain and apply matrix methods for solving a system of linear equations.
CO2	Describe orthogonal & projection in vector space and apply it to least square solution.
CO3	Identify and apply Eigen values and Eigen vectors to diagonalization.
CO4	Explain and apply Singular Value Decomposition and to obtain pseudo inverse of a matrix.
CO5	Develop algorithms and write programs to solve linear algebra problems on computers.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Type	Code	Project Management	L-T-P	Credits	Marks
OE	BTBS-T-OE-032		3-0-0	3	100

Objectives	The objective of this course is to study the fundamental tools and behavioral skills necessary to successfully launch, lead, and realize benefits, develop the skills for planning and controlling, and understanding key factors to drive successful project outcomes.
Pre-Requisites	General knowledge of any organization and its operations is sufficient.
Teaching Scheme	Regular classroom lectures with use of ICT as needed. Each session is planned to be interactive with real-life examples.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Objective of Project Management, Types of Projects, Project Life Cycle, project Initiation, project planning, Project Execution, Project closure; Analysis of a project: Market demand analysis, Technical analysis and financial estimation.	**9 Hours**
Module-2	Commonly used techniques for Project Management, Network techniques - PERT, CPM, Crashing of a project network, Line of balance (LOB): Application area of LOB, Input of LOB, Steps of LOB, Line balancing: Rank Positional weight method. Project Resource Management: Allocation, Leveling and Smoothing methods.	**9 Hours**
Module-3	Project Selection technique, Investment criteria (NPV, IRR, Benefit Cost Ratio), Project cash flows, Cost of capital, Risk analysis, Sources, Measures and perspectives of risk, Sensitivity analysis, Scenario analysis, Break-even analysis, Simulation analysis, Decision tree analysis, Managing risk, Project selection under risk.	**8 Hours**
Module-4	Project Financing, Capital structure, Sources of finance, internal accrual, securities, term loans, working capital, Equity and Debt, Venture capital and private equity.	**8 Hours**
Module-5	Social Cost Benefit Analysis (SCBA): Rationale for SCBA,UNIDO Approach, Net Benefit In terms of Economics (efficiency) Prices. Project Audit: Project failure & reasons for Audit, Phases of Project Audit.	**8 Hours**
	Total	**42 Hours**

P.T.O

Reference Books:
R1. C. Gray, E. Larson, and G. Desai, *Project Management The Managerial Process*, 7th Edition, McGraw Hill, 2013.
R2. B. Punmia and K. Khandelwal, *Project Planning and Control with PERT and CPM*, 4th Edition, Laxmi Publications, 2006.

Online Resources:
1. https://nptel.ac.in/courses/110/104/110104073/: by Prof. R. Sengupta, IIT Kanpur
2. https://nptel.ac.in/courses/110/107/110107081/: by Prof. S. K. Gupta & Prof. M. K. Barua, IIT Roorkee

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the fundamental project management tools and behavioral skills.
CO2	Explain the basic concept of various network techniques for project management.
CO3	Optimally utilize the resources for successful completion of a project.
CO4	Perform cost-benefit analysis of a project considering various factors involved.
CO5	Plan, monitor, control, and administer projects using computerized PMIS tools.

Program Outcomes Relevant to the Course:

PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Signals & Systems	L-T-P	Credits	Marks
OE	BTEC-T-OE-024		3-0-0	3	100

Objectives	The objective of this course is to study the presentation of various signals in time and spectrum domains, and stability & causality of LSI systems.
Pre-Requisites	Fundamental knowledge of basic mathematics is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Signals**: Introduction, Classification: continuous/ discrete-time, commonly used continuous-time signals and discrete-time Signals, Analog/ digital signal, Periodic/ aperiodic, Even/ odd, Energy/ power, Deterministic/ random, Operation on Continuous-time and Discrete time signals: Addition, Multiplication, Differentiation/Difference, Integration/Accumulation, Shifting, Scaling, Folding and Convolution (graphical and analytical), Correlation of Discrete-Time signals & its properties.	8 Hours
Module-2	**System and LTI/LSI System**: Introduction, Classification for both continuous time and discrete time - Linear/ Non-linear, Time varying/ time invariant, Causal/ non-causal, Dynamic/ static, Stable/ unstable and Invertible/ Non-invertible, Continuous time and Discrete time LSI system, System representation through differential equations and difference equations, Response of LSI system and convolution Integral/convolution Sum, Characterization of causality and stability of linear shift invariant(LSI).	8 Hours
Module-3	**Analysis by Fourier series and Fourier Transform**: Orthogonal and Ortho-normal signal set, Fourier series, convergence of the Fourier series, Trigonometric Fourier series and exponential Fourier series, Continuous time Fourier Transform, convergence of the Fourier transform, Fourier transform of some useful signals, properties of the Fourier transform, the notion of a frequency response and its relation to the impulse response, Parseval's theorem: Energy spectral density, Power spectral density.	9 Hours
Module-4	**Analysis by Laplace Transform**: Introduction, Region of Convergence for Laplace transform, and properties of ROC, Laplace transform of some useful signals, properties of the Laplace transform, the inverse Laplace transform and Unilateral Laplace Transform and their properties, Initial value and final value theorem, solution of differential equation using Laplace transform.	9 Hours
Module-5	**Analysis by Z-Transform**: Discrete-time system analysis using the Z-transform, Mapping from S-plane to Z-plane, Z-transform, The Region of Convergence, Z-transform of some useful sequences, Properties of Z-transform, Inverse Z-transform, Unilateral Z-Transform and its properties.	8 Hours
	Total	42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe different types of signals and systems.
CO2	Analyze various types of LSI systems responses.
CO3	Represent continuous and discrete systems in time & frequency domains using different transforms.
CO4	Investigate the system stability and causality using Laplace Transform and Z-Transform.
CO5	Analyze discrete time signals and systems using Z-transform.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Cont'd...

PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Introduction**: Significance of measurement, functional elements of generalized measurement systems, deflection & null type instruments, analog/digital mode of operation, classification of transducers; Static Characteristics: Systematic and statistical characteristics, calibration; Dynamic Characteristics: Transfer functions of typical sensing elements, step & frequency response of first & second order elements, dynamic errors, dynamic compensation, loading effect, introduction to signal & noise.	10 Hours
Module-2	**Resistive Transducer**: Resistive potentiometers, strain gauges; Inductive Transducers: Variable reluctance displacement sensor, LVDT, RVDT, Hall effect sensors; Capacitive Transducers: Variable separation, area & dielectric displacement transducer, pressure, humidity and level measurement; Translational and Rotational Velocity Measurement: Moving coil moving magnet pickups, Eddy current magnetic & photoelectric pulse counting; Seismic Measurement: Seismic displacement, velocity & acceleration pickups.	10 Hours
Module-3	**Temperature Measurement**: Thermal expansion methods - Bimetallic, Liquid in glass, Thermocouples (Laws, Characteristics, Installation), RTDs (3-wire & 4-wire type), Thermistors, IC temperature sensors, Radiation detectors, Radiation pyrometer (narrowband & broadband), Optical pyrometer.	9 Hours
Module-4	**Force Measurement**: Bourdon tube, bellows, diaphragm, load cell; Torque Measurement: Torsion bar; Pressure Measurement: Units of pressure, dead weight gauges, Manometers, Mc-Leod gauge, Thermal conductivity and Ionization gauges; Flow Measurement: Variable Head (Orifice, Venturi, Pitot static), Variable area (Rotameters), Turbine meters, Electromagnetic flow meters, Ultrasonic flow meters, Doppler velocity meters, Hot wire anemometer and mass flow meter; Miscellaneous Sensors: Optical sensors, Principle, intensity and phase modulated sensors, FBG sensor.	7 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	**Signal Conditioning System**: DC Bridge - Wheatstone Bridge, Calibration of the bridge, AC bridges, Linearization by Bridge circuit, Cold junction compensation of Thermocouple, Modulation and Demodulation Techniques, Signal Conditioning System, Signal Transmission.	**6 Hours**
	Total	**42 Hours**

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the principles and characteristics of measuring instruments.
CO2	Explain the use of resistance, inductance and capacitance principles in transducers.
CO3	Identify and utilize various temperature sensors used in industrial applications.
CO4	Articulate the principles and uses of different force, torque, pressure sensors and flow meters.
CO5	Analyze the design of signal conditioning circuits and evaluate their performance.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. https://nptel.ac.in/courses/111/102/111102098/: by Dr. S. Dharmaraja, IIT Delhi

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply probability models to real life engineering problems.
CO2	Explain Markov chain and classification of states.
CO3	Solve problems using the concepts of hidden Markov chain and Poisson process.
CO4	Apply Markov chain in problems of different field of engineering.
CO5	Apply Queuing theory in engineering and daily life situations.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Type	Code	Organizational Behaviour	L-T-P	Credits	Marks
OE	BTBS-T-OE-030		3-0-0	3	100

Objectives	The objective of this course is to understand the human interactions in an organization and develop the skills for leadership, conflict resolution and take rational decisions to attain business goals.
Pre-Requisites	General knowledge of any organization and its operations is sufficient.
Teaching Scheme	Regular classroom lectures with use of ICT as needed. Each session is planned to be interactive with real-life examples.

Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Organizational Behaviour (OB): Definition & Meaning, Importance; Learning: Nature, Learning Cycle, Components, Theories; Personality: Meaning & Definition, Determinants of Personality, Personality Traits, Personality and OB.	**9 Hours**
Module-2	Perception: Meaning & Definition, Perceptual Process, Importance of Perception in OB; Motivation: Nature & Importance, Herzberg's Two Factor Theory, Maslow's Need Hierarchy Theory, Alderfer's ERG Theory.	**8 Hours**
Module-3	Organizational Behaviour Process: Communication - Importance, Types, Gateways, Barriers, Communication as a tool for improving Interpersonal Effectiveness; Groups in Organizations: Nature, Types, Group Cohesiveness, Group Decision-making, Managerial Implications, Effective Team Building; Leadership: Leadership & Management, Theories of Leadership; Conflict: Nature of Conflict and Conflict Resolution.	**9 Hours**
Module-4	Organizational Culture: Meaning & Definition, Culture and Organizational Effectiveness; Introduction to Human Resource Management: Selection, Orientation, Training and Development, Performance Appraisal.	**8 Hours**
Module-5	Organizational Change: Importance of Change, Planned Change and OB techniques; International Organizational Behavior: Trends in International Business, Cultural Differences and Similarities, Individual and Interpersonal Behavior in Global Perspective.	**8 Hours**
	Total	**42 Hours**

Text Books:

T1. K. Davis, *Organisational Behaviour*, 9th Edition, McGraw-Hill, 1992.

T2. K. Aswathappa, *Organisational Behaviour*, 12th Revised Edition, Himalaya Publishing House, 2016.

3. https://www.studocu.com/en/search/organizational-behaviour: by different universities

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the developments in the field of OB and the micro & macro approaches inside organizations.
CO2	Analyze and compare different models used to explain individual behaviour related to motivation, learning, perception and personality.
CO3	Identify the processes used in developing communication, interpersonal relations and resolving conflicts.
CO4	Explain the role of group dynamics, demonstrate skills required for working in groups, team building and various leadership styles.
CO5	Explain the need of organizational culture and identify the process and barriers for implementing organizational change.

Program Outcomes Relevant to the Course:

PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	**Individual and Team Work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	**Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Signals and Spectra**: An Overview of Electronic Communication Systems, Types of Signal, Fourier Series, Fourier Transform, Properties of Fourier Transform, Orthogonal Signal.	**8 Hours**
Module-2	**Amplitude Modulation Systems**: Need for frequency translation, Double Side Band with Carrier (DSB-C), Double Side Band with Suppressed Carrier (DSB-SC), Modulators - Square-law, Switching, Balanced; Detectors: Square-law, Envelope, Synchronous; Single Side Band with Suppressed Carrier (SSB-SC), Frequency & Phase discrimination methods, Coherent detection, Modulation & demodulation of Vestigial Side Band modulation (VSB), Frequency Division Multiplexing, Radio Transmitter & Receiver (super heterodyne receiver).	**9 Hours**
Module-3	**Angle Modulation**: Angle Modulation, Narrow band FM, Wide band FM; FM Modulators: Direct method (Varactor diode method), Indirect method (Armstrong method), Simple slope detector, Balanced slope detector, Phase Locked Loop (PLL). **Analog Pulse Modulation**: Analog to Digital - The need, Sampling Theorem, Natural and Flat-top sampling, Quantization of signals, Quantization error, Pulse Amplitude Modulation, Pulse Width Modulation and Pulse Position Modulation.	**9 Hours**
Module-4	**Digital Pulse Modulation**: The PCM system, Bandwidth of PCM system, Delta Modulation (DM), Limitation of DM, Adaptive Delta Modulation, Differential PCM (DPCM), Comparison between PCM, DM, and DPCM. **Digital Transmission of Analog Signal**: Digital representation of analog signal, Line codes, Companding, Concept of Time Division Multiplexing, Multiplexing of PCM signals.	**8 Hours**
Module-5	**Random Variables and Processes**: Probability, Random variables, Useful probability density functions, Useful properties and certain application issues. **Mathematical Representation of Noise**: Sources of noise, Frequency-domain representation of noise, Superposition of noises, Linear filtering of noise, Noise bandwidth.	**8 Hours**
	Total	**42 Hours**

Text Books:

3. https://nptel.ac.in/courses/117/105/117105144/: by Prof. S. S. Das, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain different types of signals and their characteristics using Fourier analysis tools.
CO2	Describe the fundamentals of amplitude modulation and demodulation techniques.
CO3	Articulate performance of angle modulation techniques and various analog pulse modulation schemes.
CO4	Explain different types of digital pulse modulation schemes and digital transmission of analog signals.
CO5	Visualize the behavior of random variables, noise signal in frequency domain, and linear filtering of noise.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	**Life-long Learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	**Introduction to Bioengineering**: Sources and examples of biomedical signals, Basic medical Instrumentation system, use of microprocessors, general design constraints; Transducers: Classification, Transducers for Biomedical Applications; Sources of Bio-electric Potentials: Resting and Action Potentials; Anatomy of heart, Different types of Biomedical Signals: ECG, PCG, EEG, EMG.	9 Hours
Module-2	**Biomedical Electrodes and Recorders**: Electrode theory, Recording electrodes, Bio-potential Electrodes for ECG, EEG and EMG, Microelectrodes, ECG recorder, Sources of Artifacts in ECG and their removal methods, EEG & EMG recorder.	8 Hours
Module-3	**Patient Care Monitoring**: System concepts, Measurement of heart rate, Measurement of pulse rate, Blood pressure and blood flow measurement, Pacemakers and Defibrillators, Electric shock hazards, Leakage currents.	8 Hours
Module-4	**X-Ray and Radioisotope Instrumentation**: Generation of Ionizing Radiation, Nature and production of X-Rays, Computed Tomography, Magnetic Resonance Imaging System, Ultrasonic Imaging Systems.	8 Hours
Module-5	**Adaptive Filters**: Principle, the steepest descent algorithm, adaptive noise canceller, cancellation of interference in electrocardiography, applications; Canceling Donor heart Adaptive filters, HF noise in ECG, motion artifact in ECG, maternal interference in Fetal ECG, cancellation of maternal ECG, cancellation of ECG signal from electrical activity of chest muscles, cancellation of HF noise in Electro-surgery.	9 Hours
	Total	42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the principles and design of biomedical instruments and applications of biomedical engineering.
CO2	Explain design considerations for medical equipment with respect to the human physiological system.
CO3	Describe the principle of operation of various medical recording and imaging systems.
CO4	Identify the elements of risk for different instrumentation methods and basic electrical safety.
CO5	Explain different adaptive methods for biomedical signal processing and noise cancellation.

Program Outcomes Relevant to the Course:

PO1	**Engineering Knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	**Problem Analysis**: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	**Design/Development of Solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	**Conduct Investigations of Complex Problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	**Modern Tool Usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	**The Engineer and Society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	**Environment and Sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	**Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Cont'd. . .

PO11	**Project Management and Finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Type	Code	Soft Computing Lab	L-T-P	Credits	Marks
PC	BTCS-P-PC-032		0-0-2	1	100

Objectives	The objective of this laboratory course is to get hands on practice on Soft Computing algorithms such as Fuzzy Logic, Genetic Algorithm, and Artificial Neural Networks using C programming language starting from fundamentals to complex real life problem solving.
Pre-Requisites	Knowledge of C programming and concepts of soft computing taught in the theory class are required.
Teaching Scheme	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Write functions to generate the following parameterized fuzzy membership functions and visualize them for different parameter values: Triangular MF, Trapezoidal MF, Gaussian MF, Generalized Bell MF, Sigmoidal MF.
2	Write functions to implement following fuzzy complement operations on continuous membership functions and visualize them for different parameter values: Classical fuzzy complement, Sugeno's fuzzy complement, Yager's fuzzy complement.
3	Write functions to implement following fuzzy intersection operations (T-norms) on continuous membership functions and visualize them for different parameter values: Minimum, Algebraic product, Bounded product, Drastic product.
4	Write a function to compute the max-min composition of two fuzzy relations.
5	Write a function to compute the max-product composition of two fuzzy relations.
6	Demonstrate the effect of contrast intensification on a fuzzy membership function.
7	Write functions for implementing cylindrical extension of a 1D membership function and projection of a 2D membership function. Demonstrate the results visually.
8	Write programs to solve three unconstrained function optimization problems using Genetic Algorithm.
9	Write programs to solve three function optimization problems with constraint satisfaction using Genetic Algorithm.
10	Plot the graphs of different activation functions.
11	Implement AND, OR, XOR Gate using Single Layer Perceptron Neural Network.
12	Design a classifier using Multilayer Back propagation Neural Network to classify Iris data (UCI machine learning repository).
