

Silicon Institute of Technology
| An Autonomous Institute |

Curriculum Structure and Detailed Syllabus

**Bachelor of Technology
in
Electronics & Instrumentation Engineering**

**Department of Electronics & Instrumentation Engineering
Silicon Institute of Technology
Silicon Hills, Patia, Bhubaneswar - 751024**

Effective from Academic Year 2018-19
Build: 1.30 (31-08-2023)

Approval History

ACM#	Date	Resolutions
AC-1	14/08/2018	The curriculum & detailed syllabus of 1st Year, as proposed by the Board of Studies, is provisionally approved by the Academic Council.
AC-2	11/05/2019	The curriculum & detailed syllabus up to 2nd Year, as proposed by the Board of Studies, is approved by the Academic Council.
AC-3	28/09/2019	The amendments to the curriculum as suggested by the Boards of Studies, along with the proposal for provision of Practice School in the 4th year of B.Tech. is approved in principle by the Academic Council.
AC-4	18/08/2020	The curriculum & detailed syllabus up to 4th Year as suggested by the Boards of Studies, along with provision of Practice School in the 4th year is approved by the Academic Council.

Program Outcomes (UG Engineering)

Graduates Attributes (GAs) form a set of individually assessable outcomes that are the components indicative of the graduate's potential to acquire competence to practice at the appropriate level. The Program Outcomes (POs) for UG Engineering programmes defined by NBA are:

- PO1. **Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
- PO2. **Problem Analysis:** Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3. **Design/Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4. **Conduct Investigations of Complex Problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5. **Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO6. **The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7. **Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9. **Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11. **Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12. **Life-long Learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Educational Objectives (PEOs)

The Electronics & Instrumentation Engineering (EIE) Programme will produce graduates having the choice, talents, and knowledge to:

- PEO1. Pursue a diverse range of careers as engineers, consultants, and entrepreneurs.
- PEO2. Continue their education in engineering and interdisciplinary areas to emerge as researchers, experts, and educators.
- PEO3. Keep on learning and innovate in ever-changing global technological and economic environments.
- PEO4. Practice and inspire high ethical and technical standards and lead their professional disciplines, organizations, and communities around the world.

Program Specific Outcomes (PSOs)

- PSO1. Apply the specialized knowledge of electronics and instrumentation engineering to identify, investigate and analyze complex engineering problems in the field of measurement, instrumentation and process control.
- PSO2. Apply appropriate techniques and modern Engineering hardware and software tools to design, simulate, implement & evaluate the process control, measurement and instrumentation systems to adapt to various technological as well as management changes through independent and lifelong learning.
- PSO3. Capture Specifications, formulate, design and build embedded systems and process controllers with supervisory systems for manufacturing and processing applications.

Course Types & Definitions

L	Lecture
T	Tutorial
P	Laboratory / Practical / Sessional
WCH	Weekly Contact Hours
BS	Basic Sciences
HS	Humanities & Social Sciences (including Management)
ES	Engineering Sciences
PC	Professional Core
PE	Professional Elective
OE	Open Elective
MC	Mandatory Course
CC	Compulsory Course
PJ	Summer Internship / Project Work / Seminar
PS	Practice School / Industry Internship
VV	Viva Voce

ES	18ES1L03	Computer Programming Lab	0	0	4	0	0	2
HS	18HS1L01	Communicative & Technical English Lab	0	0	2	0	0	1
		SUB-TOTAL	16	0	12	14	0	6
		TOTAL	28			20		

Note: For some courses, the subjects have been mentioned as Subject-1 / Subject-2, i.e., with an OR option. Every student has to study both the subjects, however allocation of these subjects shall alternate between Semesters I and II. For example, if a student has been allocated *Engineering Chemistry* in Semester-I, then he/she will be allocated *Engineering Physics* in Semester-II, and vice-versa. The laboratory subjects will be as per the theory subjects allocated in the applicable semester. The same applies to all other courses provided with an OR option.

Semester II								
Type	Code	Course Title	WCH L-T-P			Credits L-T-P		
THEORY								
BS	18BS1T02	Engineering Mathematics-II	3	0	0	3	0	0

For example, if a student has been allocated *Engineering Chemistry* in Semester-I, then he/she will be allocated *Engineering Physics* in Semester-II, and vice-versa. The laboratory subjects will be as per the theory subjects allocated in the applicable semester. The same applies to all other courses provided with an OR option.

Type	Code	Engineering Mathematics - I	L-T-P	Credits	Marks
BS	18BS1T01		3-0-0	3	100

Objectives	The objective of this course is to familiarize the students with the knowledge and concepts of curve tracing, ordinary differential equations and applications, solution of system of linear equations using matrix methods, and Eigen vectors & Eigen values of matrices with applications.
Pre-Requisites	A good knowledge of trigonometry along with basics of differential and integral calculus of one variable and coordinate geometry of two and three dimensions.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the graphs of functions (curves) by knowing their characteristics like asymptotes and curvature and applying those to curve tracing.
CO2	Solve first order ordinary differential equations using various methods and apply them to physical problems.
CO3	Learn methodology to Solve second order ordinary differential equations and apply them to solve applied problems of electrical circuits.
CO4	Develop understanding of the concepts and methods of system of linear equations and apply them to solve a system.
CO5	Study and use the eigen values and eigen vectors of matrices, its properties and applications.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

BS	18BS1T05		3-0-0	3	100

Objectives	The purpose of this course is to emphasize the relevance of fundamentals and applications of chemical sciences in the field of engineering. The contents have been conceived in taking into account appropriate combinations of old and new emerging concepts in the chemical sciences area and their current and potential uses in engineering. The course attempts to address the principles of general chemistry and specific topics relevant to various engineering disciplines, so that the students can apply the knowledge in their respective areas of expertise.
Pre-Requisites	Basic knowledge on Normality, Molarity, mole concept, types of chemical reactions, and elementary idea on electrochemistry.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
	Introduction & Pre-requisites	2 Hours
Module-1	Water Treatments: Types of hardness-Units, Alkalinity of water and its significance, Softening methods and Numerical problems based on these methods; Membrane-based processes; Dissolved Oxygen, Problems with Boiler feed water and its treatments.	6 Hours
Module-2	Corrosion Science: Definition and scope of corrosion, Dry and wet corrosion; Direct chemical corrosion, Electrochemical corrosion and its mechanisms; Types of electrochemical corrosion, (differential aeration, galvanic, concentration cell); Typical Electrochemical corrosion like Pitting, Inter-granular, Soil, Waterline; Factors affecting corrosion, Protection of corrosion.	7 Hours
Module-3	Industrial Lubricants: Lubricants-Concept of tribology; Types of lubricants and Mechanism of lubrication, Physical and Chemical properties of lubricants, Additives of lubricants, Selection of lubricants, Flash Point, cloud point, freezing points of lubricants.	5 Hours
Module-4	Instrumental Techniques: Fundamentals of Spectroscopy; Principles and applications of molecular spectroscopy (such as UV-visible, IR and microwave).	6 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Energy Sciences: Types of fuels, Calorific value, Determination of Calorific value, Combustion and its calculations, Solid fuel: Coal analysis (Proximate and ultimate analysis), Elementary ideas on some gaseous fuels (Natural gas, Water gas, Producer gas, LPG) (Synthesis is excluded), Liquid fuels: IC engine fuel, concept of knocking, antiknocking, octane No and cetane No, Fractional Distillation of petroleum, Cracking of heavy oils; Battery technology – Fundamentals of primary & Secondary cells, Rechargeable batteries: Lead acid storage battery, Lithium ion battery, Fuel cells: principles, applications. Elementary idea on Photovoltaics.	10 Hours
Module-6	Nanochemistry: Nanomaterials, Synthesis of noble metal nanoparticles (e.g., Gold /silver) and oxide based nanoparticles (e.g., cuprous oxide/zinc oxide) using green synthetic route, Stabilization of nanoparticles using capping agents, Elementary ideas on characterization of nanoparticles (X-ray Diffraction (XRD) and electronic spectroscopy), applications of nanomaterials.	6 Hours
Total		42 Hours

10. <https://alison.com> - Spectroscopic Technique, Colorimetry

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Exploit the concept of hardness in softening hard water and determining the hardness of water.
CO2	Utilize the knowledge of electrochemistry and corrosion science in preventing engineering equipments from corrosion.
CO3	Understand the characteristics of industrial lubricants, mechanism of lubrication and study kinematic viscosity & flash point of lubricating oil for application in engineering.

Cont'd...

CO4	Understand the concept of molecular spectroscopy and analyze organic compounds using spectrophotometer.
CO5	Classify various fuels based on combustion parameters and understand the working principle of various batteries.
CO6	Acquire knowledge on synthesis & characterization of oxide based & noble metal nanoparticles through green synthetic route.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Type	Code	Engineering Physics	L-T-P	Credits	Marks
BS	18BS1T06		3-0-0	3	100

Objectives	The objective of this course is to obtain basic idea about various laws and understand different phenomena using principles of physics. This knowledge will be useful for the engineering students to understand the basic operating principle of instruments and techniques. The knowledge obtained can also be used to prepare various models and projects.
Pre-Requisites	Adequate knowledge and clear concepts in higher secondary physics like waves, oscillations, optics, electricity, magnetism, modern physics, etc.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
	Introduction & Pre-requisites	2 Hours
Module-1	Wave Optics: Concept of wave and wave equation, Superposition of waves (two beam and multiple beam) and interference, Huygen's principle, Interference by division of amplitude and division of wavefront, Theory of Newton's rings and its applications, Diffraction, Fraunhofer and Fresnel diffraction, Fraunhofer's diffraction from a single slit, Theory of plane diffraction grating, Determination of wavelength of light with a plane diffraction grating.	10 Hours
Module-2	Vector Calculus: Gradient of scalar field, Divergence and curl of vector field, Gauss divergence theorem and Stokes theorem (statement only). Maxwell's Equations: Gauss's law in electromagnetism, Faraday's law of electromagnetic induction, Ampere's circuital law, Displacement current, Maxwell's electromagnetic equations (integral and differential form). Electromagnetic Waves: Electromagnetic Wave (EM) equations - Free space, Dielectric and conducting medium, Transverse nature of EM wave, Electromagnetic wave in ionized medium, Electromagnetic energy density, Poynting's theorem and Poynting's vector.	11 Hours
Module-3	Introduction to Quantum Mechanics: Need of quantum mechanics, Particle nature of radiation - Black body radiation (no derivation), Photoelectric effect, Compton effect and pair production, Concept of de-Broglie's matter waves, Phase and group velocity, Heisenberg's Uncertainty principle with applications.	6 Hours
Module-4	Schrödinger's wave equation with applications: Concept of wave function ψ and interpretation of $ \psi ^2$, Schrödinger's time-dependent and time-independent equations, Probability current, Expectation values, Operators in quantum mechanics, Eigen functions and Eigen values, Applications of Schrödinger's equation- Particle in one dimensional rigid box, Potential barrier (emphasis on tunneling effect).	6 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Laser: Radiation-matter interaction, Absorption of light, Spontaneous and stimulated emission of light, Population inversion, Types of Laser-Solid State Laser (Ruby), Gas Laser (He-Ne), Properties and applications of Laser. Optical Fiber: Structure and Principle, Types of optical fiber, Numerical aperture, Applications of optical fiber.	7 Hours
Total		42 Hours

Text Books:

- T1. D. R. Joshi, *Engineering Physics*, 1st Edition, Tata McGraw-Hill Publication, 2017.
 T2. Md. M. Khan and S. Panigrahi, *Principle of Physics*, Vol. I & II, Cambridge Univ. Press.

- <https://nptel.ac.in/courses/115102026/>
- <https://nptel.ac.in/courses/113104012/>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyze wave properties of light like interference and diffraction and apply them in communications
CO2	Develop Maxwell's equations from basic laws of electromagnetism and apply them to understand the properties of electromagnetic waves.
CO3	Analyze wave-particle duality to understand radiation-matter interaction
CO4	Develop and apply Schrödinger's equations to diverse fields like bound particle, potential barrier etc.
CO5	Investigate the basic principle, properties, operations and applications of laser & optical fibre in different fields like communication, industry, medicine, research etc.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Cont'd...

PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Basic Electronics Engineering	L-T-P	Credits	Marks
ES	18ES1T01			2-0-0	2

Objectives	Know broadly the concepts and functionalities of the electronic devices, tools and instruments. Understand general specifications and deployability of the electronic devices, and assemblies. Develop confidence in handling and usage of electronic devices, tools and instruments in engineering applications.
Pre-Requisites	Knowledge on intrinsic and extrinsic Semiconductors, Physics and Chemistry of Higher Secondary Science level.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, and planned lectures to make the sessions interactive with problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction to Electronics: Signals, Frequency spectrum of signals, Analog and digital signals, Amplifiers, Digital logic inverters. (2 Hours) Diodes and Applications: Semiconductor Diode - Ideal versus Practical, Resistance Levels, Diode Equivalent Circuits, Load Line Analysis; Diode as a Switch, Diode as a Rectifier, Half Wave and Full Wave Rectifiers, Breakdown Mechanisms, Zener Diode – Operation and Applications; Clipper and Clamper Circuits. Opto-Electronic Devices – LEDs, Photo Diodes and Applications (8 Hours)	10 Hours
Module-2	Bipolar Junction Transistor (BJT): Construction, Operation, Amplifying Action, Common Base, Common Emitter and Common Collector Configurations, Operating Point, Fixed and Voltage divider Biasing Configurations.	5 Hours
Module-3	Field Effect Transistor (FET): Construction, Characteristics of Junction FET (JFET), Depletion and Enhancement type Metal Oxide Semiconductor FETs (MOSFET), Fixed and Voltage divider Biasing Configurations, Introduction to Complementary MOS (CMOS) circuits.	5 Hours
Module-4	Operational Amplifiers and Applications: Introduction to Op-Amp, Differential Amplifier Configurations, Basics of Op-Amp, Characteristics of Ideal Op-Amp, CMRR, PSRR, Slew Rate; Block Diagram and Pin Configuration of IC 741 Op-Amp, Applications of Op-Amp as: Summing Amplifier, Difference Amplifier, Differentiator, Integrator.	4 Hours
Module-5	Feedback Amplifiers: Principle, Advantages of Negative Feedback, Different Feedback Topologies. Oscillators: Classification, RC Phase Shift Oscillator, High Frequency LC Oscillator.	4 Hours
Total		28 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Become familiar with basic signals, diodes and their applications.
CO2	Investigate on the operation of different configurations of bipolar junction transistor. Analyze and design different biasing configurations with their applications.
CO3	Understand the construction, operation and characteristics of JFET and MOSFET. Analyze and design different biasing configurations with their applications.
CO4	Learn the construction and characteristics of Op-Amp and design circuits for various applications using Op-Amp.
CO5	Understand different types of feedback topologies and design various kinds of oscillators.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Type	Code	Basic Electrical Engineering	L-T-P	Credits	Marks
ES	18ES1T02		2-0-0	2	100

Objectives	The objective of this course is to introduce the students to basic concepts of electricity and magnetism. The course will cover the basics of DC & AC networks, principle of operation of different electrical machines and measuring instruments. The course will train the students about the basic protection system and safety requirements and will give an overview of the electrical power systems.
Pre-Requisites	Basic knowledge of intermediate Physics, knowledge of basic Mathematics such as Calculus, Ordinary Differential Equations, Matrices etc.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Fundamentals of Electric Circuits: Charge & current, Voltage & current sources, Electrical circuit elements (R, L and C) and their characteristics, Kirchoff's current and voltage laws. Resistive Network Analysis: Node voltage & Mesh current analysis, Node voltage and mesh current analysis with controlled sources, Thevenin theorem, Norton's theorem, Principle of superposition, Maximum power transfer theorem. Transient Analysis: Writing differential equations for circuits, Time-domain analysis of first-order RL and RC circuits.	8 Hours
Module-2	Representation of sinusoidal wave forms, Peak and RMS values, Phasor representation, Real, Reactive, and Apparent power, Power factor. Analysis of single-phase AC circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel). Three phase balanced circuits, Voltage and current relations in star and delta connections.	6 Hours
Module-3	Electricity and magnetism, Magnetic circuit and magnetic reluctance, Magnetic materials, BH characteristics, Ideal and practical transformer, EMF equation of transformer, Equivalent circuit.	4 Hours
Module-4	Construction of DC machines, Generator, Types of excitation system, Working of DC motor, Classification of DC motor, Characteristics and speed control of DC motor. Generation of rotating magnetic fields, Construction and working of a 3-phase induction motor, Torque-slip characteristic. Single-phase induction motor.	4 Hours
Module-5	Introduction to Measuring instruments: Different electrical measuring instruments, Energy meters: Connection and elementary calculations for energy consumption. Brief introduction to generation, transmission and distribution of electrical power, Earthing & electrical safety.	3 Hours
Total		28 Hours

7. <https://www.electrical4u.com/>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand and analyze basic electrical network with DC source.
CO2	Measure current, voltage and power of series RLC circuit excited by single-phase AC circuit.
CO3	Develop understanding of different concepts of magnetic fields and apply it to single phase transformer.
CO4	Study the working principles of rotating electrical machines.
CO5	Become familiar with the components of low-voltage electrical installations and different measuring instruments.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Type	Code	Computer Programming	L-T-P	Credits	Marks
ES	18ES1T03			3-0-0	3

Objectives	The objective of this course is to introduce fundamentals of computer programming using the C programming language to the students. Starting with simple programs, the course will cover advanced topics like structures, pointers, file processing and pre-processor directives etc. and enable the students to write programs using C language for solving various engineering problems.
Pre-Requisites	Basic analytical and logical understanding including basic knowledge and usage of computers is required for this course. Prior experience with any other programming language will be beneficial.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction to computers and programming, operating system, compilers, interpreters, algorithm, flowchart, pseudocode etc., structure of C program, character set, identifier, keywords, constants, variables, data types, operators, expressions, statements, operator precedence and associativity, type conversion, input/output statements.	8 Hours
Module-2	Decision making and branching: if, if-else, nested if-else, else-if ladder and switch constructs, iterative execution of code using loops: while, for, do-while, nested loops, controlling loop behavior using jump statements (break, continue, goto) and exit statements.	8 Hours
Module-3	Arrays (1-D & 2-D), declaration and initialization of arrays, accessing array elements, operations on arrays - insertion, deletion, searching, sorting (selection sort), merging etc., character arrays and strings, initialization, input & output of strings, operations on strings, array of strings, string handling functions.	9 Hours
Module-4	User-defined functions, declaration and definition, parameter passing by value, functions returning values, idea on call by reference, passing arrays to functions, recursion, storage classes - auto, register, static, extern, Structures and Unions - definition, initialization, accessing members, array of structures, arrays within structures, structures and functions, self-referential structures.	9 Hours
Module-5	Understanding pointers, declaration, initialization, accessing variables using pointers, pointer expressions, scale factor, chain of pointers, using pointers with arrays, strings, functions and structures, dynamic memory management, pre-processor directives, command line arguments, basics of file handling.	8 Hours
Total		42 Hours

5. <http://www2.its.strath.ac.uk/courses/c/>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Formulate logic of a problem and write C programs using variables, expressions and input/output statements.
CO2	Develop structured C programs involving decision making using different control constructs.
CO3	Solve problems involving similar set of data items and convert them into C programs using arrays.
CO4	Design modular C programs and handle heterogeneous data items using structures & unions.
CO5	Write C applications using pointers, pre-processor directives, command line arguments and files.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Elements of Technical Communication: General vs Technical Communication; Factors, participants, code, channels, message, feedback, Effective Business Communication; Importance of technical communication; Communication across cultures and common problems; Barriers to effective communication.	6 Hours
Module-2	Sounds of English: vowels, diphthongs, consonants and consonant clusters, problem sounds, phonemic transcription, syllabic division and stress, weak forms and rhythm, intonation.	5 Hours
Module-3	Effective Business Communication: Structure of a business organization; purpose of business organization; Technology in communication; use of bias-free language; channels of communication: upward, downward, diagonal, grapevine, open door communication; forms of technical communication: internal, external, formal, informal, oral, written. Language structures for day-to-day business communication: persuasion, negotiation, argumentation, making suggestions, assertive communication. Public speaking and presentation skills; content development; clarity of speech; emotions displayed by body language, personal space and zones, personal appearance and attitude to time.	9 Hours
Module-4	Critical Reading: sub-skills of reading; reading a feature article; reading an editorial; skimming through a short report; reading contemporary essays; reading prescribed English short stories.	11 Hours
Module-5	Effective Business Writing: constituents of effective writing: ; paragraph development: coherence, cohesion, progression of ideas, elements of style, clarity and precision, avoiding redundancy, circumlocution, jargons; Dealing with positive and negative messages; business writing: writing a memo; writing an e-mail, writing business letters, notice, writing different types of reports, writing a proposal.	11 Hours
Total		42 Hours

5. <http://www.academiccourses.com/Courses/English/Business-English>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the elements of technical communication and communication across cultures.
CO2	Learn about aspects of English pronunciation and speak using a neutral accent.
CO3	Learn about the channels of business communication and business hierarchies in order to communicate effectively in a business set up.
CO4	Enhance their reading skills and be able to critically analyse texts of various kind.
CO5	Compose different types of business correspondences effectively.

Program Outcomes Relevant to the Course:

PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Provide basic information about Indian constitution and to analyze the legalities and related issues of drafting, adoption and enforcement of the Indian Constitution as a fundamental law of the nation and the provisions and privileges of Indian Citizenship.
CO2	Understand and judiciously use the fundamental rights and privileges envisaged in the constitution propagating social harmony and equality and respecting the rights and liberties of other people.
CO3	Analyze the major dimensions of Indian Political System and to contribute in protecting and preserving the sovereignty and integrity of India.
CO4	Know the successful functioning of democracy in India and to respect the Constitutional Institutions like Judiciary, Executive and Legislature.
CO5	Understand their obligations, responsibilities, privileges & rights, duties and the role that they have to play in deciding the Administrative Machinery of the country.

Program Outcomes Relevant to the Course:

PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Type	Code	Environmental Science & Engineering	L-T-P	Credits	Marks
MC	18NC1T02			2-0-0	0

Objectives	This course serves as a general introduction to environmental science. From ecology and ecosystems, it acquaints the students to air & water quality and the impact of pollution on the environment due to industries and urbanization. Some remediation methods of minimizing the impact of pollutants through technology and legal systems are also addressed.
Pre-Requisites	Basic knowledge of physics, chemistry and biology is required for this course.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required and some sessions are planned for expert talk, seminar presentation by students.

Evaluation Scheme

3. <http://nptel.ac.in/courses/120108005/>: Municipal Solid Waste Management.
4. <https://www.epa.gov/environmental-topics/>: All Current Environmental Issues.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply concepts of ecology, eco systems, food chain and biogeochemical cycles for better understanding of functions of the environment.
CO2	Understand environmental gradients, tolerance levels and environmental laws for prevention of environmental pollution.
CO3	Enhance knowledge of water and wastewater treatment for prevention of water pollution.
CO4	Understand the chemistry of pollutants in the atmosphere, soil and groundwater and understand principles of noise abatement.
CO5	Enhance knowledge of waste minimization technique to minimize and manage solid, hazardous wastes generated in different areas.
CO6	Understand the role of IT and human health, and the issues of e-waste management.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Type	Code	Engineering Mathematics - II	L-T-P	Credits	Marks
BS	18BS1T02		3-0-0	3	100

Objectives	The objective of this course is to familiarize the perspective engineers with the knowledge and concepts of probability and statistics which are essential to study non-deterministic systems.
Pre-Requisites	Basics of sets, counting techniques, differential and integral calculus of one variable and coordinate geometry of two and three dimensions.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Laplace transform, Inverse Laplace transform, shifting theorems, Transform of derivatives and integrals, Unit step function and Dirac delta function, applications to differential equations.	7 Hours
Module-2	Differentiation & Integration of Transforms, Convolution and integral equations, Use of partial fraction, system of differential equations.	7 Hours
Module-3	Random Experiment & Probability, Conditional Probability, Bayes' Rule, Random variable & Probability Distribution, Mean, Variance.	8 Hours
Module-4	Uniform Discrete Distributions: Binomial, Poisson, Hyper geometric, Geometric Random Variable, Continuous Uniform Distribution: Normal Distribution, Exponential Distribution.	8 Hours
Module-5	Joint Distribution, Covariance, Sampling & sampling distributions, maximum likelihood estimation, Estimation of mean, Confidence Interval of mean, difference of two means, variance.	7 Hours
Module-6	Testing of Hypothesis about mean, two means and variance, Testing goodness of fit, Linear regression, least square line, correlation coefficient.	5 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Study and use the concepts of probability and random variables and applying them to evaluate probabilities of different events.
CO2	Know different discrete and Continuous probability models and apply those to solve probability problems of day to day activities.
CO3	Understand the applications of joint & sampling distributions.
CO4	Learn methodology to apply statistical testing and regression.
CO5	Study the concepts of Laplace Transform and to apply those for solving ODE.
CO6	Develop understanding of convolution and its application to integral equations.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Type	Code	Data Structures & Algorithms	L-T-P	Credits	Marks
ES	18ES1T05		3-0-0	3	100

Objectives	To understand the abstract data types and to solve problems using data structures such as stacks, queues, linked lists, hash tables, binary trees, heaps, binary search trees, graphs and writing programs for these solutions.
Pre-Requisites	Knowledge of programming in C, specifically on structures, pointers, functions, recursion etc., are required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction to data structures, classification of data structures, algorithmic notation, complexity of algorithms, asymptotic notations, abstract data types. Arrays - introduction, representation of arrays (row and column major representation), basic operations on array (traverse, insert, delete, search), sparse matrix, representation of sparse matrix using triplet form, operations on sparse matrix (addition, transpose)	8 Hours
Module-2	ADT Stack - stack model, representation of stack using array, basic operations with analysis, applications- recursion, and conversion of infix to post fix expression, evaluation of postfix expression. ADT Queue - queue model, representation using array, basic operations with analysis, circular queue, introduction to priority queue and double ended queue.	8 Hours
Module-3	Linked list - introduction, types of linked list (single, double, circular), representation in memory, operations on linked list (traverse, search, insert, delete, sort, merge) in each type with analysis. Representation of polynomial and its operations (addition, multiplication), implementation of stack and queue using linked list.	9 Hours
Module-4	Tree - terminology, representation, binary tree - tree traversal algorithms with and without recursion. Binary search tree, Operations on Binary Search Tree with analysis, threaded binary tree, general tree, Height balanced tree (AVL tree), m-way search trees, B-trees. Graph - terminology, representation (adjacency matrix, incidence matrix, path matrix, linked representation), graph traversal (BFS, DFS), Dijkstra's single source shortest path algorithm, Warshall's all pair shortest path algorithm, topological sort.	9 Hours
Module-5	Sorting algorithms - bubble sort, selection sort, insertion sort, quick sort, merge sort, radix sort, heap sort. Hashing- hash functions and hashing techniques. collision resolution techniques- linear probing, quadratic probing, chaining.	8 Hours
Total		42 Hours

5. <https://www.geeksforgeeks.org/data-structures/>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyze performance of algorithms and implement various operations on array and sparse matrix.
CO2	Apply the basic operations of stacks and queues to solve real world problems.
CO3	Implement different types of linked list operations and their applications.
CO4	Represent data using trees & graphs to use them in various real life applications.
CO5	Analyze various sorting algorithms and explore different hashing techniques.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Engineering Chemistry Lab	L-T-P	Credits	Marks
BS	18BS1L05			0-0-2	1

Objectives	Objectives of the subject is to educate the students with modern instrumental techniques & role of chemical analysis in various fields of engineering and science to examine and understand the effect of chemicals, compositions, impurities etc., on the properties of materials & the detrimental effects of polluting materials, and other unwanted impurities.
Pre-Requisites	Student should have the knowledge of balancing equations, principle of titrations, titrant, titrand, preparation of standard solutions, concentration of a solution, indicators used in a titration, principle of reduction-oxidation reactions, handling of instruments like pH meter & accurate measurement of sample by using electronic balance.
Teaching Scheme	Regular laboratory experiments conducted under supervision of the teacher. Demonstration will be given for each experiment.

Evaluation Scheme

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Determination of Total hardness of water sample by EDTA method.
2	Determination of alkalinity of water.
3	Determination of available chlorine of bleaching powder/residual chlorine in tap water.
4	Determination of dissolved oxygen in supplied water.
5	Determination of saponification value of oil.
6	Determination of Acid value of oil.
7	Determination of Flash-point/fire point of a lubricant by Pensky-Martens apparatus.
8	Determination of kinematic viscosity and Viscosity Index of a lubricant by Redwood viscometer.
9	Determination of concentration of a colour substance by Spectrophotometer.
10	Green synthesis of noble metal/oxide based nanoparticles.
11	Estimation of calcium in limestone powder.
12	Determination of chloride content of water.
13	Determination of the partition coefficient of a substance between two immiscible liquids.
14	Adsorption of acetic acid by charcoal.
15	Use of the capillary viscosimeters to demonstrate the isoelectric point as the pH of minimum viscosity for gelatin solutions and/or coagulation of the white part of egg.
16	Proximate analysis of coal sample.
17	Determination of iodine value of oil/fat.

- <http://www.eco-web.com/edi/01759.html>: Efficient Wastewater Treatment: The field for analytical and monitoring

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyse various water quality parameters such as alkalinity, hardness, dissolved oxygen & chloride content before it is put into use in various general, research, or industrial purposes.
CO2	Test the quality of an oil/fat by measuring its iodine or acid value by means of amount of unsaturation for various industrial use.
CO3	Verify quality of a lubricant by means of its viscosity or flash point which gives their nature & flammability for various industrial applications.
CO4	Analyse various fractions present in coal by proximate analysis for better use of carbon based compounds in industrial applications.
CO5	Study the importance of green synthesis by way of synthesising metal/ metal oxide based nano-particles for various material applications.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Cont'd...

PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Type	Code	Engineering Physics Lab	L-T-P	Credits	Marks
BS	18BS1L02		0-0-2	1	100

Objectives	The objective of this course is to develop the basic practical skill to design and measure different parameters of a physical quantity with proper error analysis which can help them in different field of engineering sciences. This practical knowledge will be useful for the engineering students to understand the basic operating principle of instruments. The knowledge obtained can also be used to prepare various models and projects.
Pre-Requisites	Adequate practical knowledge in Higher Secondary Physics including measuring instruments like screw gauge, slide caliper, spherometer etc. Knowledge of error analysis, graphical analysis etc. is also required.
Teaching Scheme	Regular laboratory experiments conducted under supervision of the teacher. Demonstration will be given for each experiment.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Determination of bandgap of semiconductor.
2	Determination of rigidity modulus by static method.
3	Determination of surface tension by capillary rise method.
4	Determination of acceleration due to gravity by bar / Kater's pendulum.
5	Determination of Plank's constant, verification of inverse square law by photocell.
6	Determination of wavelength of light by Newton's ring apparatus.
7	Determination of grating element of a diffraction grating.
8	Plotting of characteristic curve of a PN junction diode.
9	Plotting of characteristic curves of BJT.
10	Verification of laws of vibration of stretched string using sonometer.
11	Determination of wavelength of laser source by diffraction grating method.
12	Study of Hall effect.
13	Study of RC circuit.
14	Determination of Young's modulus by bending of beams.
15	Michelson Interferometer.
16	Determine of reduction factor of the given tangent galvanometer and horizontal component of Earth's magnetic field using tangent galvanometer.

4. <https://arxiv.org/ftp/arxiv/papers/1510/1510.00032.pdf>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyze the wave aspect of light like interference and diffraction by conducting Newton's rings and Fraunhofer diffraction experiment.
CO2	Investigate some properties of matter like surface tension of water (capillary rise method) and coefficient of elasticity of steel, copper.
CO3	Verify and analyze the IV characteristics of junction diode and BJT, charging and discharging of capacitor in RC circuit.
CO4	Study and apply Hall effect to calculate the Hall coefficient, carrier concentrations; measure band gap of semiconductor and dielectric constant of dielectric material.
CO5	Understand and verify laws of transverse vibrations in a stretched string using sonometer.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction of fitting practice and tools used in fitting jobs.
2	Exercise involving measuring, marking, cutting and filing practice.
3	Fitting of male and female mating parts.
4	Introduction of Lathe, exercise involving facing, straight turning, step turning, taper turning and thread cutting in Lathe machine.
5	Introduction of Milling and Shaping machines.
6	Preparing single step on a square block in Milling machine.
7	Preparing a key way on a square block in Shaping machine.
8	Introduction to basic principles of Arc and Gas welding.
9	Preparing lap joint by Gas welding and butt joint by Arc welding.
10	Sheet metal forming and joining operations.

Text Books:

4. <http://nptel.ac.in/courses/112107144/27> (Welding Processes)

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Study and practice use of hand tools and their operations in a fitting shop.
CO2	Design and model various basic prototypes in fitting, such as a Paper weight.
CO3	Design and model and use of various suitable tools form a chining processes like facing, straight turning, step turning, taper turning and thread cutting.

Cont'd...

CO4	Identify and use suitable tools for cutting of a mild steel work piece with the help of shaping and milling machines.
CO5	Design and model various basic prototypes in welding such as a Lap joint and Butt joint.
CO6	Design and model various basic prototypes using sheet metal forming and joining operations.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Engineering Graphics Lab	L-T-P	Credits	Marks
ES	18ES1L05			0-0-2	1

Objectives	To create awareness and emphasize the need for Engineering Graphics in all the branches of engineering, to follow basic drawing standards and conventions, to develop skills in three-dimensional visualization of engineering component, to solve specific geometrical problems in plane geometry involving lines, plane figures and special curves, to produce orthographic projection of engineering components working from pictorial drawings.
Pre-Requisites	Basic understanding of Geometry
Teaching Scheme	Regular laboratory classes using drawing tools under supervision of the teacher. Demonstration will be given for each drawing assignment using ICT as when required.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Principles of Engineering Graphics and their significance, usage of various drawing instruments, lettering, dimensioning principles.
2	Conics and Engineering Curves.
3	Orthographic Projections: Principles of orthographic projections - conventions, projections of points and lines.
4	Auxiliary projection Technique: Projection of Points and lines on Auxiliary Planes.
5	Projections of Planes: projections of planes in simple position & inclined to both planes.
6	Projection of Solids: projection of solids in simple position & inclined to both planes.
7	Principles of Isometric projection, isometric scale, isometric views, conventions, isometric views of lines & planes.
8	Isometric projections of solids, conversion of isometric views to orthographic views.
9	Development of surface and intersection of surfaces.
10	Sections and sectional views of simple and compound solids.
11	Introduction to AUTOCAD tools.

4. https://ocw.mit.edu/courses/mechanical-engineering/2-007-design-and-manufacturing-i-spring-2009/related-resources/drawing_and_sketching/

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand and apply the concepts of lettering and dimensioning for drafting of machine drawings and building drawings and different Conics and Engineering Curves.
CO2	Recognize and be familiar with the Orthographic projections of points, lines.
CO3	Develop the concept of Orthographic projections of planes and solids.
CO4	Differentiate between isometric scale, isometric projections and views.
CO5	Have a broad overview of various sheet-metal work by the concept of development of surfaces and solids and Sectional Views of Simple and compound solids.
CO6	Draw various machine components and building structure drawing by using AutoCAD.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

Type	Code	Basic Electronics Engineering Lab	L-T-P	Credits	Marks
ES	18ES1L01		0-0-2	1	100

Objectives	Know broadly the concepts and functionalities of the electronic devices, tools and instruments. Understand general specifications and deployability of the electronic devices, and assemblies. Develop confidence in handling and usage of electronic devices, tools and instruments in engineering applications.
Pre-Requisites	Knowledge on intrinsic and extrinsic Semiconductors, Physics and Chemistry of Higher Secondary Science level.
Teaching Scheme	Regular laboratory experiments to be conducted under the supervision of teachers and demonstrators with the help of ICT, as and when required along with pre-lab session and demonstration for each experiment.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Familiarization of electronic components and devices (Testing of semiconductor diodes and transistors using digital multi-meter).
2	Study and use of Oscilloscope, signal generator to view waveforms and measure amplitude and frequency of a given waveform.
3	V-I characteristics of semiconductor diode and determining its DC and AC resistances.
4	Implementation of clipper circuits, both positive clipper and negative clipper. Observe its output waveforms and compare them with theoretical analyzed results.
5	Study of half-wave and full-wave rectifier circuits without and with capacitor filter; recording of the waveforms and measurement of average and rms values of the rectified output.
6	Study of static characteristics of BJT in CE configuration.
7	DC biasing (Fixed bias) of the transistor in CE configuration and determination of its operating point.
8	Studies on Op-Amp applications (Inverting, non-inverting, integrating differentiating configurations) recording of the input-output waveforms.
9	Studies on logic gates (truth table verification of various gates, implementation of EXNOR and Half Adder using basic gates).
10	Design of 2:1 MUX and simple SR Latch.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Familiarize with various electronic components, measuring instruments, semiconductor diodes and their applications.
CO2	Acquire knowledge of characteristics of transistors and design, testing & implementation of transistors in various applications
CO3	Gain understanding of operational amplifiers (Op-Amp) and design & testing of electronic circuits for various applications using Op-Amp.
CO4	Develop understanding of digital logic gates and design & test digital circuits for various applications using logic gates.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Type	Code	Basic Electrical Engineering Lab	L-T-P	Credits	Marks
ES	18ES1L02			0-0-2	1

Objectives	Introduce the students to different electrical components and basic safety rules and regulations, give hands on practice about different measuring and protection equipment and their operations, help the students to understand and verify the basic concept of electrical & magnetic circuits and electric machines. The laboratory experiments shall go hand-in-hand with the topics taught in the theory class.
Pre-Requisites	Basic knowledge of different electrical components and different analysis techniques of electrical and magnetic circuits. Topics taught in Basic Electrical Engineering theory class are essential to conduct the experiments.
Teaching Scheme	Regular laboratory experiments conducted under supervision of the teacher. Demonstration will be given for each experiment.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Connection and measurement of power consumption of a fluorescent lamp.
2	Identification of different terminals of a DC compound machine.
3	Power and power factor measurement of 3-phase load by two wattmeter method.
4	Connection and testing of a single-phase energy meter.
5	Determination of open circuit characteristics (OCC) of DC shunt generator.
6	Calculation of power and power factor in series R-L-C circuit by AVW method.
7	Polarity test of a single-phase transformer.
8	Study of single-phase induction motors / fan motor.
9	Verify Thevenin's Theorem and Superposition Theorem.
10	Draw the B-H curve of a magnetic Specimen.
11	Starting of three-phase induction motor.
12	Regulation and efficiency of single phase transformer by direct loading.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Get an exposure to common electrical components and their ratings.
CO2	Make electrical connections by wires of appropriate ratings.
CO3	Understand the usage of common electrical measuring instruments.
CO4	Understand the basic characteristics of transformers and electrical machines.
CO5	Verify different network theorems and magnetic properties.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Computer Programming Lab	L-T-P	Credits	Marks
ES	18ES1L03			0-0-4	2

Objectives	To enable the students to analyse problems, formulate and implement solutions using the C programming language. The students will develop logical understanding for converting solutions of problems into C programs to be executed on a computer.
Pre-Requisites	Basic analytical and logical understanding including basic knowledge and usage of computers is required for this course.
Teaching Scheme	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction to computers and Linux operating system.
2, 3	Get acquainted with the programming environment - Linux commands and VI-editor.
4	Editing, compiling, executing, and debugging of simple C programs.
5	Programs using operators and formatted input/output statements.
6	Decision making using if, if-else, else-if ladder, nested if.
7	Decision making using switch-case construct.
8, 9	Loop control structure (while, do-while, for) with jump statements.
10	Nested loops (printing various formats)
11, 12	1-D arrays including operation like searching, sorting, merging etc.
13	Handling 2-D arrays such as matrix operations.
14, 15	Programs on strings using various string handling functions (library functions)
16, 17	Designing user-defined functions.
18, 19	Programs on recursion.
20	Designing user defined functions for string manipulation.
21	Passing arrays (both 1D and 2D) to functions.
22, 23	Structure, array of structure, nested structure.
24	Dynamic memory management.
25	Self-referential structure (create and display operation of single linked list)
26, 27	File handling - reading from and writing to files.
28	Command-line argument, pre-processor directives.

4. https://www.tutorialspoint.com/compile_c_online.php

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Construct C programs for mathematical operations using control statements.
CO2	Develop C programs for Array and String manipulation.
CO3	Construct modular programs for better maintenance and reusability.
CO4	Manipulate heterogeneous data using structure and union.
CO5	Create and manipulate files using C programs.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Type	Code	Communicative & Technical English Lab	L-T-P	Credits	Marks
HS	18HS1L01		0-0-2	1	100

Objectives	This laboratory course is designed to make students effective communicators and addressing issues like speaking inhibitions, accomplished by individual and team activities based on the four skills of language (LSRW).
Pre-Requisites	Basic knowledge of English grammar and the ability to speak, read and write using the English language.
Teaching Scheme	Regular laboratory classes with various tasks designed to facilitate communication through pair work, group/team work, individual and group presentations, discussions, role plays, listening to audios, watching videos, business writing and vocabulary enhancement.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Ice-breaking activities: dealing with inhibitions to speak (team activity)
2	Just a Minute (individual activity)
3	Role Play on channels of communication in the business world (team activity)
4	Speech activity 1: content development (individual activity)
5	Speech activity 2: for fluency, delivery and appropriate body language (individual activity)
6	Ear training: developing pronunciation skills (individual activity)
7	Listening comprehension: listening for overall and specific information (individual activity)
8	Oral presentations: preparing for public speeches (team activity)
9	Reading comprehension 1 (individual activity)
10	Reading comprehension 2 (individual activity)
11	Group presentation (team activity)
12	Writing Activity 1 (individual activity)
13	Writing Activity 2 (individual activity)

- R3. B. K. Mitra, *Communication Skills for Engineers*, Oxford University Press, 2011.
- R4. B. K. Das, *An Introduction to Professional English & Soft Skills*, Cambridge Univ. Press, 2009.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Speak in public and overcome their inhibitions to speak.
CO2	Communicate in simulated business contexts.
CO3	Develop English pronunciation skills through practice.
CO4	Work effectively as a member of a team or as a leader through group presentation assignments.
CO5	Critically analyse texts of various kind and compose effective business messages.

Program Outcomes Relevant to the Course:

PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

CO5								1	1	3		3		2	3

Type	Code	Data Structures & Algorithms Lab	L-T-P	Credits	Marks
ES	18ES1L06			0-0-4	2

Objectives	Develop skills to design and analyze simple linear and non linear data structures. It strengthen the ability of students to identify and apply the suitable data structure for the given real world problem. It enables them to gain knowledge in practical applications of data structures.
Pre-Requisites	Knowledge of programming in C, specifically on structures, pointers, functions, recursion etc., are required.
Teaching Scheme	Regular laboratory classes conducted under supervision of the teacher. The experiments shall comprise of programming assignments.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Operations on arrays – insert, delete, merge.
2	Selection Sort, Bubble sort.
3	Linear Search and Binary search.
4	Representation of sparse matrix.
5, 6	Addition and transpose of sparse matrix.
7	Implementation of stack using array.
8	Conversion of infix to postfix expression.
9	Evaluation of postfix expression.
10	Operations of queue using array.
11	Operations of circular queue.
12	Single linked list operations.
13	Single linked list operations (continued).
14	Double linked list operations.
15	Double linked list operations (continued).
16	Circular linked list operations.
17	Stack using linked list.
18	Queue using linked list.
19	Polynomial addition using linked-list.
20	BST operations.
21	BST operations (continued).
22, 23	Graph traversal (BFS, DFS).
24	Warshall's shortest path algorithm.
25	Insertion Sort, quick sort.

Cont'd...

Experiment-#	Assignment/Experiment
26	Merge Sort.
27, 28	Implementation of Heap Sort.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the concepts of Analytic function.
CO2	Evaluate complex line integral and find the Taylor's series expansion of analytic functions.
CO3	Expand functions in Laurent's Series and evaluate integrations using residues.
CO4	Find the Fourier series and Fourier transforms of functions.
CO5	Understand the concepts of power series solution and some important special functions.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Type	Code	OOP Using Java	L-T-P	Credits	Marks
ES	18ES1T06			3-0-0	3

Objectives	The objective of this course is to introduce the key concepts of object-oriented programming (OOP) using Java as the programming language.
Pre-Requisites	Basic analytical and logical understanding including basic knowledge and usage of computers is required for this course. Prior experience with a programming language will be beneficial.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Object oriented concepts: Object oriented systems development life cycle, Unified Modeling Language, UML class diagram, Use-case diagram; Java Overview: Java Virtual Machine, Java buzz words, Data types, Operators, Control statements, Class fundamentals, Objects, Methods, Constructors, Overloading, Access modifiers.	9 Hours
Module-2	Inheritance: Basics of Inheritance, using super and final keyword, method overriding, Abstract classes, defining and importing packages, access protection, interfaces; Exception handling: Exception fundamentals, types, understanding different keywords (try, catch, finally, throw, throws), User defined exception handling.	8 Hours
Module-3	Input/Output: Files, stream classes, reading console input; Threads: thread model, use of Thread class and Runnable interface, thread synchronization, multithreading, inter thread communication.	8 Hours
Module-4	String manipulation: Basics of String handling, String class, StringBuilder, StringBuffer, StringTokenizer. Applet basics and life cycle; Event Handling: delegation event model, event classes, sources, listeners, Adapter class.	8 Hours
Module-5	Introduction to GUI Programming: working with windows, frames, graphics, color, and font. AWT Control fundamentals. Swing overview; JavaFX overview; Java database connectivity: JDBC overview, creating and executing queries, dynamic queries.	9 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply object oriented principles in software design process to develop Java programs for real life applications.
CO2	Employ inheritance and exception handling techniques for developing robust and reusable software.
CO3	Develop programs using stream classes for various I/O operations and design concurrent programs using threads to maximize the use of processing power.
CO4	Design applications for text processing using String class and develop user interactive applications using event handling.
CO5	Design database driven GUI applications using AWT, Swing and JDBC.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand and analyze the structural configuration, different biasing methods of BJT.
CO2	Analyze the structural behavior, characteristics and different biasing configurations of JFET and MOSFET.
CO3	Design small signal models and estimate the performance parameters of different amplifier configurations required for the industry.
CO4	Study the construction and characteristics of an Op-Amp and design circuits for various linear applications using Op-Amp.
CO5	Design various industrial circuits such as oscillators & negative feedback amplifiers using transistors and validate their experimental results.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Network Theorems: Thevenin's theorem, Norton's theorem, Superposition theorem, Reciprocity theorem, Maximum power transfer theorem, Tellegen's theorem, Millman's theorem, Compensation theorem (AC & DC Networks); Coupled Circuits: Introduction to coupled Circuit, Dot Convention, coefficient of coupling, Electrical equivalent of magnetically coupled coils, Series and parallel connection of coupled coils. Transformer as a magnetically coupled circuit; Resonance: Introduction, Series Resonance, Parallel Resonance, Quality factor, Bandwidth and Selectivity for series resonant and parallel resonant circuits, Frequency Response Curve.	10 Hours
Module-2	Laplace Transform & its Application: Introduction, Laplace transform of some basic functions, Laplace transform of periodic functions, Inverse Laplace transform, initial and final value theorem; Application Of Laplace Transform for Transient Analysis: Response of RL, RC & RLC network with step, sinusoidal, impulse and ramp input.	8 Hours
Module-3	Two Port Network Functions & Responses: Introduction, z, y, ABCD and h-parameters, Reciprocity and Symmetry, Interrelation of two-port parameters, Interconnection of two-port networks; Network Functions & Response: Transfer function and driving point function for one & two port networks, Concept of poles and zeros, Significance & Restriction on location of Poles and Zeros, Time domain behavior from Pole-Zero plots.	6 Hours
Module-4	Fourier Series & its Application: Fourier series, Fourier analysis and evaluation of coefficients, Steady state response of network to periodic signals; Fourier Transform: Fourier transform of some basic functions, Properties of Fourier Transform; Application of Fourier transform to electrical network; Filter: Introduction, Types and classification of Filter, introduction to design parameters of passive filter, Design of active filters and their frequency response.	12 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Network Synthesis: Hurwitz polynomial and its properties, Positive real functions and their properties, Concepts of network synthesis, Realization of simple R-L, R-C and L-C functions in Cauer-I, Cauer-II, Foster-I and Foster-II forms.	8 Hours
Total		44 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply concepts of network theorems and coupled circuits in solving complex networks problems and frequency response and analysis of different resonant circuits.
CO2	Understand the switching phenomena of electrical circuits and evaluate transient and steady state performance using Laplace Transformation.
CO3	Determine two-port network parameters and their practical application to electrical and electronic circuits.
CO4	Analyze sinusoidal & non-sinusoidal signals using Fourier series and transform, identify & design various filters and examine their frequency response.
CO5	Identify Network Functions and synthesize one port network using Foster and Cauer forms.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Cont'd...

PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
	Introduction: Review of quantum mechanics, Electrons in periodic lattices, E-K diagrams, Energy bands in solids.	2 Hours
Module-1	Electrons and Holes in Semiconductors: Silicon crystal structure, Donors and acceptors in the band model, effective mass, Density of states (D(E)), Thermal equilibrium, Fermi-Dirac distribution function (f(E)) for electrons and holes, Fermi energy, Derivation of equilibrium concentration of electrons(n) and holes (p) from D(E) and f(E), Fermi level and carrier concentrations, np product and intrinsic carrier concentration.	8 Hours
Module-2	Electrons, Holes and their Transport Phenomena in Semiconductors: Carrier concentrations at extremely high and low temperatures: complete ionization, partial ionization and freeze-out, Energy-band diagram and Fermi-level, Variation of E_f with doping concentration and temperature; Carrier drift: Electron and hole mobilities, Drift current and conductivity and resistivity; Carrier diffusion: diffusion current, Total current density, Thermal generation, Electron-hole recombination.	8 Hours
Module-3	PN Junction Diode and Schottky Diode: P-N junction characteristics; Building blocks of the pn junction theory, Energy band diagram and depletion layer of a pn junction, Built-in potential, Carrier injection under forward bias-Quasi-equilibrium boundary condition; current continuity equation, I-V characteristics, Reverse biased P-N junction: Avalanche breakdown, Zener diode, Schottky diode: I-V characteristics, Comparison between Schottky barrier diode and pn-junction diode.	9 Hours
Module-4	MOS Capacitor and MOSFET: The MOS structure, Energy band diagrams, Surface accumulation, Surface depletion, Flat-band condition and flat-band voltage, Threshold condition and threshold voltage, C-V characteristics of ideal MOS capacitor, Basic structure of MOSFET, MOSFET V_t , Q_{inv} and I-V Characteristics.	9 Hours

Cont'd...

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyze the charge carrier statistics in semiconductors for the calculation of built in potential, electric field and depletion barrier width etc.
CO2	Investigate the carrier transport phenomena such as drift and diffusion and their relationship (Einstein's relationship) to calculate the conductivity of semiconductor devices.
CO3	Apply the theory of carriers like concentrations and transport to investigate the electronic properties of pn junction diode and Schottky diode under equilibrium and non-equilibrium conditions.
CO4	Investigate the C V Characteristics of MOS capacitor and I V characteristics of MOSFET.
CO5	Understand the basic fabrication steps in CMOS Technology.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the concepts of economics, engineering economics and its application in engineering.
CO2	Solve problems related to engineering economics and analyze decision alternatives in engineering projects.
CO3	Evaluate how changes in demand and supply affect market and production.
CO4	Assess the effects of changes in costs, selling price and units sold on the break-even point and target profit.
CO5	Analyze the macroeconomic environment of the business and its impact on society and enterprise.

Program Outcomes Relevant to the Course:

PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

P.T.O

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

Type	Code	OOP Using Java Lab	L-T-P	Credits	Marks
ES	18ES1L07			0-0-2	1

Objectives	The objective of the course is to apply object oriented programming principles and implement object oriented programming using JAVA language.
Pre-Requisites	Basic analytical and logical understanding including basic knowledge and usage of computers is required for this course. Prior experience with any other object oriented programming language will be beneficial.
Teaching Scheme	Regular laboratory classes with the use of ICT whenever required, demonstration through practical simulation of code using IDE.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Understanding Java platform, compilation, and execution of a java program.
2	Overview of Eclipse IDE.
3	Use of class, use of control statements, data types, operators.
4	Implement class, object, constructor, methods, and other OOP features.
5	Inheritance Basics, more uses of constructor, method overriding, use of final.
6	Object class, practical use of abstract class.
7	Using Interface for achieving multiple inheritance, implementation of package.
8	Exception handling fundamentals, java built-in exceptions, Use of Scanner class for console input, use of own Exception subclass.
9	Java thread life cycle model and implementation approach, thread priority, implementation of synchronization.
10	I/O Basics, byte stream and character streams, reading and writing files.
11	Applet life cycle implementation, text processing using Java predefined String, StringBuilder and StringBuffer classes.
12	GUI basics and Window fundamentals, working with different Component, Container and Layout Managers.
13	Event handling for interactive GUI application.
14	Java database connectivity using JDBC, steps and use of different drive types.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply object oriented principles in software design process and develop Java programs for real-life applications.
CO2	Employ inheritance and exception handling techniques for developing robust, reusable software.
CO3	Develop programs using stream classes for various I/O operations and design concurrent programs using threads to maximize the use of processing power.
CO4	Design applications for text processing using String class and develop user interactive applications using event handling.
CO5	Design database driven GUI applications using AWT, Swing and JDBC.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Analog Electronic Circuits Lab	L-T-P	Credits	Marks
PC	18EI1L01			0-0-2	1

Objectives	The objective of the course is to design, implement and testing of transistor biasing, amplifying action and frequency response. Also study the linear and nonlinear applications of amplifiers.
Pre-Requisites	Basic analytical and logical understanding including basic knowledge of Basic electronics is required.
Teaching Scheme	Regular laboratory experiments to be conducted under supervision of the teacher with focus on implementation in hardware/software tools.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Design and simulate BJT bias circuit and compare the results.
2	Design and simulate JEET/MOSFET bias circuit and compare the results.
3	Design and simulate BJT common-emitter circuit and compare DC and AC performance.
4	Design and simulate JFET/MOSFET common-source circuit and compare DC and AC performance.
5	Determining the frequency response of a common-emitter amplifier: low frequency, high frequency and mid frequency response and compare with simulated results.
6	Differential amplifiers circuits: DC bias and AC operation without and with current source.
7	Study of Darlington connection and current mirror circuits.
8	OP-Amp Frequency Response and Compensation.
9	Application of Op-Amp as differentiator, integrator, square wave generator.
10	Obtain the band width of FET/BJT using Square wave testing of an amplifier.
11	RC phase shift oscillator/Wien-Bridge Oscillator using Op-Amp/Crystal Oscillator.
12	Class A and Class B Power Amplifiers.

3. <https://wiki.analog.com/university/courses/electronics/labs>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Design, assemble and test BJT biasing circuits.
CO2	Analyze the Dc and Ac performance of BJT and FET.
CO3	Understand the frequency response of single & multi-stage BJT and compare the results.
CO4	Study operational amplifier and its various applications.
CO5	Analyze and design various wave shaping circuits.
CO6	Implement different oscillator circuits and analyze power amplifier characteristics.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Circuit Theory Lab	L-T-P	Credits	Marks
PC	18EE1L01		0-0-2	1	100

Objectives	The objective of the course is to provide practical working knowledge of network theory and recording the experimental data effectively and correctly.
Pre-Requisites	Basic knowledge of electrical & electronics engineering, Laplace transform and differential equations is required.
Teaching Scheme	Regular laboratory experiments to be conducted using hardware and software tools under the supervision of the teacher. Demonstration along with required safety measures will be explained for each experiment.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Verification of Network Theorems (Superposition, Thevenin, Norton, Maximum Power Transfer) both in DC & AC.
2	Study of DC and AC Transients.
3	Determination of circuit parameters: Open Circuit and Short Circuit parameters.
4	Determination of circuit parameters: Hybrid and Transmission parameters.
5	Frequency response of Low pass and High Pass Filters.
6	Frequency response of Band pass and Band Elimination Filters.
7	Determination of self inductance, mutual inductance and coupling coefficient of a single phase two winding transformer representing a coupled circuit.
8	Study of resonance in R-L-C series circuit.
9	Study of resonance in R-L-C parallel circuit.
10	Spectral analysis of a non-sinusoidal waveform.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Gain knowledge on procedures to conduct experiments safely, analyze results and develop technically sound report of outcomes.
CO2	Relate the co-relation between frequency and circuit parameters at resonance condition.
CO3	Design of different configurations in electrical networks.
CO4	Employ concept of coupled circuits to electrical machines.
CO5	Analyze sinusoidal & non-sinusoidal signals using Fourier series and transform.
CO6	Identify & design various filters and examine their frequency response.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the concepts vector differential calculus and their applications.
CO2	Understand the concepts vector integral calculus and their applications.
CO3	Solve partial differential equations for engineering applications and interpret the solution.
CO4	Find the root of non-linear and transcendental equations using numerical methods and interpolate a data.
CO5	Perform numerical integration and solve ordinary differential equations using various numerical methods.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Basic concepts of Thermodynamics and Pure Substances: Introduction, basic concepts and definitions - System, Control Volume, Surrounding, Boundaries, Types of Systems, Macroscopic and Microscopic approaches, Thermodynamic Equilibrium, State, Property, Process, Exact & Inexact Differentials, Point and Path functions, Cycle – Reversibility and Irreversibility, Zeroth Law of Thermodynamics as the basis for Temperature Measurement – Principles of Thermometry, Types of Thermometers, Constant Volume gas Thermometer; Definition of pure substance, p-v, T-v, T-s and h-s diagrams for water, Triple point and critical state, properties during change of phase, Dryness Fraction, Property tables. Ideal Gas Law, Equations of State.	12 Hours
Module-2	First and Second Laws of Thermodynamics: Joule's Experiments – First law of Thermodynamics, PMM1, First law applied to a Closed System, Steady Flow Energy Equation (SFEE) with examples such as Nozzle, Diffuser, Throttling devices, Turbine and Compressor; Kelvin-Planck and Clausius Statements; Corollaries, PMM2, Carnot's principle, Carnot cycle and the Thermodynamic Temperature Scale, Clausius Inequality, Entropy, Principle of Entropy Increase; Heat Engine Cycle (Steam Power Plant) and Refrigeration Cycle, Calculation of COP.	12 Hours
Module-3	Engineering Mechanics: Basic concepts, System of Forces, Coplanar Concurrent Forces, Resultant-Moment of Forces and its Applications; Couples, Moment (about point and about axis), Varignon's theorem, Resultant of concurrent and non-concurrent coplanar forces, Static equilibrium, Free body diagram, Reactions; Basic concept of pulleys, Friction, Laws of Coulomb friction; Problems involving large and small contact surfaces (Ladder and Wedges.)	12 Hours

Cont'd...

Module-#	Topics	Hours
Module-4	Center of Gravity & Moments of Inertia: Centroid and Centre of Gravity, Centroid of simple figures from first principle, Centroid of composite sections; Centre of gravity and its implications; Theorems of Pappus and Guldinus, Area moment of inertia - Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections; Mass moment inertia of circular plate, Cylinder, Cone, Sphere, parallelepiped.	8 Hours
Module-5	Kinematics of Rectilinear and Curvilinear Motion: Differential equations of rectilinear motion, D' Alembert's Principle, Momentum and Impulse, Work & Energy, Conservation of energy, Impact; Normal and Tangential acceleration, Motion of a Projectile, Work and Energy in curvilinear motion.	12 Hours
Total		56 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Become familiar with the terms used in thermodynamics and measurement of temperature, pressure and pure substances.
CO2	Acquire skills and knowledge to apply the first law of Thermodynamic to solve the problems related to steady flow devices and understand the concepts of second law of Thermodynamics.
CO3	Understand the principles of mechanics and analyze static systems to solve real life problems.
CO4	Realize concepts of centroid, center of gravity and distributed forces in a plane, determine the area and mass moments of inertia and apply them for basic structural design.
CO5	Acquire skills and knowledge to solve problems in dynamics for both rectilinear and curvilinear motion.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Fundamental Concepts: Introduction, Digital Signals, Basic Digital Circuits, Different Logic Gates and their Logic Operations, Universal Logic Gates, Complete Logic Sets. Examples of IC Gates; Logic Families – TTL and CMOS Logic Families, Implementation of logic gates using TTL and CMOS logic; Number Systems and Codes: Number Systems, Binary Number System, Signed Binary Numbers, Binary Arithmetic, 1's and 2's Complement Arithmetic, Octal Number System, Hexadecimal Number System, Codes, Error Detecting and Correcting Codes.	8 Hours
Module-2	Combinational Logic Design: Boolean Algebra and Identities, Algebraic Reduction and Realization using Logic Gates and Universal Logic Gates; Standard Representation for Logic Functions: Sum-of-Products (SOP) and Product-of-Sums (POS) forms, Canonical SOP and POS forms; K-map representation and simplification of logic functions using K-map, Minimization of 2, 3, 4 variable logical functions; Don't care conditions; Combinational Logic Components: Multiplexer, De-Multiplexer, Decoders, Encoder (Priority Encoder), Design of Combinational Circuits using Multiplexer and Decoder, Adders, Subtractors, Carry-Look-Ahead Adder, Binary Multiplier, An Equality Detector and Comparator, BCD to 7-Segment Display Decoder.	9 Hours
Module-3	Sequential Logic Design(Flip-Flops and FSMs): Flip Flops – A 1-bit memory, Bistable latch (SR and D), the clocked SR flip flop, J-K, T and D type flip-flops, Race Around Condition, Master Slave JK-flip flop, Conversion of flip-flops; Finite State Machines (FSMs) – Mealy and Moore models of Finite State Machines.	9 Hours
Module-4	Sequential Logic Design (Shift Registers and Counters): Shift Registers – SISO, SIPO, PISO, PIPO and Universal Shift Register, Applications of Shift Registers (Serial to Parallel Converter, Parallel to Serial Converter), Ring Counter, Twisted Ring Counter (Johnson Counter); Counters – Design of Ripple (Asynchronous) Counters (Up/Down Counter, Mod-N Counter), Design of Synchronous Counters, Gray Code Counter and Random Sequence Counter using State Diagrams.	8 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Programmable Logic Devices: Programmable Logic Array (PLA), Programmable Array Logic (PAL), Complex Programmable Logic Devices (CPLDs); Semiconductor Memories: Basics of ROM, SRAM & DRAM; Basic Hardware Description Language: Introduction to VHDL programming language, Different Modeling Styles (Dataflow, Behavioral and Structural), Data types and Objects, VHDL program combinational and sequential circuits.	8 Hours

Course Outcomes: At the end of this course, the students will be able to:

CO1	Become familiar with various number systems, codes and Boolean algebra.
CO2	Design and analyze combinational logic circuits.
CO3	Design & analyze various sequential logic circuits and be familiar with counter design.
CO4	Design, analyze and implement memory array using sequential network for digital logic & investigate performance of CMOS based logic circuits in modern VLSI technology.
CO5	Simulate and synthesize various digital circuits using VHDL in industry standard tools such as Xilinx, Mentor Graphics etc.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PC	18EE1T02		3-0-0	3	100

Objectives	The objective of this course is to introduce the students to basic principle of operation of different electrical & electronic measuring instruments and their uses in different branches of engineering. The course will also introduce the applications of transducers, storage, display and data acquisition systems.
Pre-Requisites	Basic knowledge of intermediate physics, Mathematics, Basic Electrical Engineering and Basic Electronics Engineering is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Types of Measurement Systems, Accuracy and Precision, Types of Errors, Standards and calibration, Classification of Measuring instruments. Electromechanical Indicating type Instruments: Types of torque, general constructional details. Ammeter and Voltmeter: Derivation for Deflecting Torque of PMMC, MI, Electro Dynamometer and Induction type. Measurement of Power, Energy and Frequency: Construction, Theory and Principle of operation of (a) Electro-Dynamometer and Induction type Wattmeter (b) Single Phase Induction Type Watt-hour meter (c) Frequency Meter.	10 Hours
Module-2	Measurement of Resistance: Measurement of Resistance of Insulating Materials, Measurement of Resistance of Earth Connections. Measurement of Inductance: Maxwell's, Hay's, Anderson Bridge, Measurement of Mutual-Inductance by Felici's method. Measurement of Capacitance: Wein's, Owen's and Schering Bridge. Wagner's earthing device.	8 Hours
Module-3	Potentiometer: DC Potentiometers (Crompton), AC Potentiometers (Drysdale-Tinsley). Instrument Transformers: Construction, Theory, Equivalent circuit, Phasor Diagram, and characteristics of CTs and PTs.	8 Hours
Module-4	Electronic Instruments: Digital voltmeters, Ammeters, Multimeters, AC Voltmeters using Rectifiers. Storage and Display Devices: Magnetic disk and tape recorders, Digital plotters and printers, CRT display, Digital CRO, LED, LCD & dot matrix display, Data loggers.	8 Hours
Module-5	Transducers and Data Acquisition Systems: Classification of transducers, Selection of transducers, Resistive, Capacitive & Inductive transducers, Piezoelectric, Hall effect, Optical and digital transducers, Elements of data acquisition system, A/D and D/A converters, Smart sensors.	8 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Identify the instrument suitable for accurate and precise measurement of current, voltage, power and energy with their construction, theory and operating principle.
CO2	Estimate accurately the values of R, L and C employing suitable bridges.
CO3	Understand the construction, theory and working of Potentiometers and Instrument Transformers and their application.
CO4	Learn the working principle of various electronics instruments, storage and display devices.
CO5	Understand the working of various transducers and data acquisition systems.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Module-#	Topics	Hours
Module-1	Concepts of Management: Management as an art or science, the process of management, managerial skills, good managers are born, not made, management is concerned with ideas, things and people, inducing workers to put in their best, levels and types of management, evolution of management thought, managerial environment.	8 Hours
Module-2	Functions of Management: Planning and its features and process, types of plan, effective planning, Organizing and its process, formal and informal organization, directing and its elements, staffing and functions, controlling & its features and process, tools of controlling.	6 Hours
Module-3	Marketing Function: Modern concepts of marketing, marketing vs. selling, functional classification of marketing, functions of marketing management, marketing process; Marketing Mix: product and types of product, product life cycle, development of a new product, price, factors affecting price, pricing strategies; Distribution channel: role and functions, selection of a distribution channel, promotion and types of promotion, developing an advertising campaign, promotional strategies.	12 Hours
Module-4	Financial Function: Scope and objectives, financial functions, sources of finance, project appraisal, tools of financial decisions making, overview of working capital.	6 Hours
Module-5	HRM Function: Human Resource Management, Human Resource Development, importance of HRM, overview of job Analysis, job description, job specification, labour turnover; Manpower planning, recruitment, selection, induction, training and development, placement, wage and salary administration, performance appraisal, grievance handling, welfare aspects.	10 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the basic concepts of management and organization.
CO2	Explain fundamental management functions such as planning, directing, organizing, leading and controlling.
CO3	Adopt marketing policy by applying modern concept of marketing and select appropriate distribution channels.
CO4	Apply knowledge of financial functions in management for decision making.
CO5	Utilize the concepts of HRM functions to manage & develop human resources in an organization.

Program Outcomes Relevant to the Course:

PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction to Biology: Chemical foundations and basic chemistry of cell – Carbon compounds and cell as a unit of life; Physical and chemical principles involved in maintenance of life processes; Cell Structure & Functions – Ultra-structure and functions of cellular components (Prokaryotic and Eukaryotic cells), cell wall, plasma membrane, endoplasmic reticulum; Biomolecules – Carbohydrates, Lipids, Amino Acids, Proteins, Nucleic acids; Tissue systems – Overview of animal and plant tissue systems.	8 Hours
Module-2	Metabolisms & Cell Division: Exothermic and endothermic versus endergonic and exergonic reactions; Concept of K_{eq} and its relation to standard free energy, Spontaneity, ATP as an energy currency, breakdown of glucose (Glycolysis and Krebs cycle) and synthesis of glucose (Photosynthesis), Energy yielding and energy consuming reactions, Concept of Energy charge Morphology of chromosomes; Cell theory – Cell cycle and phases; Mitosis and meiosis.	8 Hours
Module-3	Genetics & Organic Evolutions: Laws of heredity – Biological indicators, bio-sensors; Mutations – Cause, types and effects on species; Molecular Genetics: Structures of DNA and RNA; Origin of life – Haldane and Oparins concepts; Modern concept of natural selection and speciation – Lamarkism, Darwinism/Neo-Darwinism.	8 Hours
Module-4	Microbiology & Immunology: Concept of single celled organisms, Concept of species and strains, Identification and classification of microorganisms, Microscopy, Ecological aspects of single celled organisms, Sterilization and media compositions, Growth kinetics. Microbial diseases, epidemiology and public health; Human immune mechanism – Types of immunities; Antigen/Antibody reactions – Applications in human health; Immunological disorders: Auto-immune diseases.	10 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Biochemistry & Biotechnology: Amino acids & Proteins – Classification based on function and structure; Protein synthesis – Components and regulatory mechanisms; Enzymes – An overview; Biotechnology: Basic concepts on Totipotency and Cell manipulation; Plant & Animal tissue culture – Methods and uses in agriculture, medicine and health.	7 Hours
Total		42 Hours

4. http://www.euro.who.int/data/assets/pdf_file/0013/102316/e79822.pdf

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand different types of cells, list their parts, and describe their structural components and the differences between them.
CO2	Know about metabolism and cell theory.
CO3	Comprehend genetics, organic evolution, and the immune system.
CO4	Identify the cause, symptoms, diagnosis and treatment of common diseases.
CO5	Recognize biological processes like protein synthesis, know about action of enzymes and tissue culture.

Program Outcomes Relevant to the Course:

PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Digital Logic Gates: Investigate logic behaviour of AND, OR, NAND, NOR, EX-OR, EX-NOR, Invert and Buffer gates, use of Universal NAND Gate.
2	Combinational Circuit Design: Design, assemble and test: adders and subtractors.
3	Combinational Circuit Design: Code Converters, Gray code to Binary and 7 Segment Display.
4	Universal Gates: Design, implement and test a given design example with (i) NAND Gates only (ii) NOR Gates only and (iii) using minimum number of Gates.
5	Multiplexer and De-multiplexer: Design with multiplexers and de-multiplexers.
6	Flip-Flop: Assemble, test and investigate operation of SR, D & J-K flip-flops.
7	Shift Registers: Design and investigate the operation of all types of shift registers.
8	Counters: Design, assemble and test various ripple and synchronous counters - decimal counter, Binary counter with parallel load.
9	Parallel Adder and Accumulator: Design, implement and test.
10	Binary Multiplier: design and implement a circuit that multiplies 4-bit unsigned numbers to produce an 8-bit product.
11	Memory Unit: Investigate the behaviour of RAM unit and its storage capacity – 16×4 RAM: testing, simulating and memory expansion.
12	Clock-pulse generator: Design, implement and test.
13	Verilog/VHDL Simulation and implementation of Experiments 2 to 12.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyse the function of logic gates and implementation of Boolean functions.
CO2	Realize Universal gates and Implementation of minimized Boolean Expressions.
CO3	Design and analyze different combinational circuits.
CO4	Design various asynchronous and Synchronous Sequential Circuits.
CO5	Acquire knowledge about internal circuitry and logic behind any digital system.
CO6	Simulate various digital circuits using VHDL in industry standard tool such as Xilinx.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Measurement of Low Resistance using Kelvin's Double Bridge.
2	Measurement of Self Inductance using Anderson's Bridge.
3	Measurement of capacitance using Schering Bridge.
4	Calibration of Voltmeters and Ammeters using Crompton's Potentiometer.
5	Testing of Energy meters (Single phase type).
6	Study of hysteresis loop using CRO.
7	Measurement of R, L, and C using Q-meter.
8	Measurement of Power in a single phase circuit using CT and PT.
9	Measurement of Power and Power Factor in a three phase AC circuit by two-wattmeter method.
10	Study of Lissajous pattern using CRO and measurement of unknown frequency.
11	Measurement of Iron Loss from B-H Curve by using CRO.
12	Measurement of Self-Inductance using Ammeter-Voltmeter method.
13	Study of Spectrum Analyzer.

MC	18NC7L01			0-0-2	0

Objectives	To impart skills in students for control of mind, body and soul, enhance self-awareness, focus, and concentration, bring together physical and mental wellness, manage stress and anxiety, achieve perfect equilibrium and harmony of body & mind, and promote self-healing.
Pre-Requisites	There are no pre-requisites for this course.
Teaching Scheme	Regular practice classes conducted under supervision of the qualified Yoga teacher with necessary explanation and demonstration for each session.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Introduction; introduction of Yoga
2	<i>Pranayama</i> ; performing breathing exercise
3	<i>Mudra</i> ; learning various types of <i>Mudras</i> and their benefits
4	<i>Bandha</i> ; learning various types of <i>Bandhas</i> and their benefits
5	<i>Chakra</i> ; learning various types of <i>Chakras</i> and their benefits
6	<i>Chakshu Visrant Asana Samuha</i> ; eye movement and exercises
7	Twisting set; standing twisting asana
8	Side stretching set; standing Side stretching <i>asana</i>
9	Forward bending set; standing Forward bending <i>asana</i>
10	Backward bending set; standing Backward bending <i>asana</i>
11	Balancing set; learning <i>Vrikshasana</i> , <i>Ekpada Pranamasana</i> and benefits
12	<i>Surya Namaskar</i> ; surya namaskar mantra and poses
13	<i>Vajrasana</i> set; sitting <i>asana</i> sets
14	<i>Padmasana</i> set; sitting <i>asana</i> sets
15	Sleeping asana and <i>Yoga Nidra</i> ; relaxation postures

Text Books:

T1. E. F. Bryant, *The Yoga Sutras of Patanjali*, 1st Edition, North Point Press, 2009.

Reference Books:

R1. Swami Satyananda Saraswati, *Asana Pranayama Mudra Bandha*, 4th Edition, Yoga Publication Trust, Munger (Bihar), India, 2008.

Online Resources: There are a number of online resources available for this course. The student is advised to search on the Internet and locate the required study materials as per advise of the teacher.

P.T.O

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Promote positive health, get relief from stress and obtain balance of body & mind.
CO2	Acquire knowledge of integral approach of Yoga Therapy to common ailments.
CO3	Develop skills to adopt Yoga practices for health and general well-being.
CO4	Develop overall personality through control of body, mind and soul.
CO5	Enhance scientific attitude and team spirit for creative and constructive endeavors.

Program Outcomes Relevant to the Course:

PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

Note: Courses offered under each elective are given in "List of Electives" on Page 100.

List of Electives

Code	Elective # and Subjects
<i>Professional Elective - I</i>	
18EI2T09	IoT & Applications
18EI2T51	Optoelectronic Devices & Instrumentation
18EE2T41	Energy Conversion Devices
18CS2T35	Computer Organization & Architecture
<i>Professional Elective - II</i>	
18EC2T39	Embedded System Design
18EI2T26	Advanced Sensor Technology
18EI2T61	Virtual Instrumentation
18EE2T54	Power Electronics
<i>Open Elective - I</i>	
18EE3T26	[EEE] Basics of Power Systems
18BS3T01	[BSH] Applied Linear Algebra
18BS3T02	[BSH] Fluid Mechanics
18EC3T35	[ECE] Information Theory & Coding
18CS3T04	[CSE] Fundamentals of DBMS
<i>Open Elective - II</i>	
18EE3T39	[EEE] Power Station Engineering
18BS3T06	[BSH] Numerical Optimization
18BS3T07	[BSH] Organisational Behaviour
18EC3T29	[ECE] Digital Communication
18CS3T09	[CSE] Operating Systems
18CS3T10	[CSE] Programming in Python

Note: *Open Electives are choice-based courses offered by other departments as indicated within brackets.*

Type	Code	Transducers & Measurement Systems	L-T-P	Credits	Marks
PC	18EI1T02		3-0-0	3	100

Objectives	The objective of this course is to study the characteristics of different types of measurement systems and industrial applications of various transducers & sensors for design & construction of precise measuring instruments.
Pre-Requisites	Basic knowledge of physics, mathematics, electrical and electronics is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction: Definition of measurement, application & types of instruments, functional elements of generalized measurement systems, active/passive transducers, analog/digital mode of operation, null and deflection methods; Static Characteristics: Systematic characteristics, statistical characteristics, calibration; Dynamic Characteristics: Transfer functions of typical sensing elements, step and frequency response of first and second order elements, dynamic errors in measurement systems, dynamic compensation, loading effect, signal & noise.	10 Hours
Module-2	Resistive Transducers: Resistive potentiometers, strain gauges; Inductive Transducers: Variable reluctance displacement sensor, LVDT, RVDT, Hall effect sensors; Capacitive Transducers: Variable separation, area & dielectric displacement transducer, pressure, humidity and level measurement; Translational and Rotational Velocity Measurement: Moving coil moving magnet pickups, Eddy current magnetic & photoelectric pulse counting; Seismic Measurement: Seismic displacement, velocity and acceleration pickups.	10 Hours
Module-3	Temperature Measurement: Thermal expansion methods - Bimetallic, Liquid in glass, Thermocouples (Laws, Characteristics, Installation), RTDs (3-wire & 4-wire type), Thermistors, IC temperature sensors, Radiation detectors, Radiation pyrometer (Narrow Band & Broad Band), Optical pyrometer.	9 Hours
Module-4	Force Measurement: Bourdon tube, bellows, diaphragm, load cell; Torque Measurement: Torsion bar; Pressure Measurement: Units of pressure, dead weight gauges, Manometers, Mc-Leod gauge, Thermal conductivity and Ionization gauges; Flow Measurement: Variable Head (Orifice, Venturi, Pitot static), Variable area (Rotameters), Turbine meters, Electromagnetic flow meters, Ultrasonic flow meters, Doppler velocity meters, Hot wire anemometer and mass flow meter.	7 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Signal Conditioning System: DC Bridge - Wheatstone Bridge, Calibration of the bridge, AC bridges, Linearization by Bridge circuit, Cold junction compensation of Thermocouple, Modulation and Demodulation Techniques, Signal Conditioning System, Signal Transmission.	6 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the principles and characteristics of measuring instruments.
CO2	Explain the use of resistance, inductance and capacitance principles for transducers.
CO3	Identify and utilize various temperature sensors used in industrial applications.
CO4	Articulate the principles and uses of different force, torque, pressure sensors and flow meters.
CO5	Analyze the design of signal conditioning circuits and evaluate their performance.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Cont'd...

PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction: Historical Perspective, VLSI Design Methodologies, VLSI Design Flow, Design Hierarchy, Concept of Regularity, Modularity and Locality, VLSI Design Styles; Fabrication of MOSFETs: Introduction, Fabrication Processes Flow – Basic Concepts, The CMOS n-Well Process, Layout Design Rules, Stick Diagrams & Layout of complex CMOS Logic Gates (Euler Method).	11 Hours
Module-2	MOS Transistor: The Metal Oxide Semiconductor (MOS) Structure, The MOS System under External Bias, Structure and Operation of MOS Transistor (MOSFET), MOSFET Current-Voltage Characteristics, MOSFET Scaling and Small-Geometry Effects, MOSFET Capacitance.	11 Hours
Module-3	MOS Inverter Circuits: Introduction, Voltage Transfer Characteristics, Noise Margin Definitions, NMOS Transistors as Load Devices, CMOS Inverters, Sizing Inverters; Static MOS Gate Circuits: Introduction, CMOS Gate Circuits, Complex CMOS Gates, MUX Circuits, Calculation of Inverter Equivalent for NAND, NOR and other Complex Logic Circuits, Flip-flops and Latches.	12 Hours
Module-4	High Speed CMOS Logic Design: Introduction, Switching Time Analysis, Detailed Load Capacitance Calculation, Improving Delay Calculation with Input Slope, Calculation of Interconnect Parasitics, Calculation of Interconnect Delay (Elmore Delay), Gate Sizing for Optimal Path Delay, Optimizing Paths with Logical Effort, Power Dissipation in CMOS Gates, Power and Delay Tradeoffs.	12 Hours
Module-5	Transfer Gate and Dynamic Logic Design: Introduction, Basic Concepts of Pass Transistor, CMOS Transmission Gate Logic, Dynamic logic, Domino logic, NORA; Basics of Semiconductor Memory: DRAM, SRAM Cell Design & Operation, Memory Architecture; Design for Testability: Introduction, Fault Types and Models, Built-In Self-Test (BIST) Techniques, Current Monitoring IDDQ Test.	10 Hours
Total		56 Hours

5. <https://nptel.ac.in/courses/106/105/106105161/>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Identify suitable method to design circuits and systems using modern tools by following appropriate design flow and fabrication steps.
CO2	Understand the structure and operational analysis of MOSFET under external bias condition before and after scaling.
CO3	Design, implement and investigate Inverter, combinational and sequential logic circuits using CMOS technology.
CO4	Investigate switching characteristics of inverter to estimate its delay time and power consumption.
CO5	Design and analyze transmission gates, various memory cells, acquire the knowledge of different testing techniques and their reliability.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Cont'd...

PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

3. <https://nptel.ac.in/courses/108/105/108105102/>: by Prof. S. Chattopadhyay, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the architecture, pins & signals, programming model, instruction execution of 8085 microprocessor and its interfacing with memory and I/O devices.
CO2	Describe the architecture, modes of operation, memory organization, interrupts of 8086 microprocessor and its interfacing with 8255 PPI and 8257 DMA controller.
CO3	Explain the concepts of embedded ICs, RISC and CISC processors and 8051 microcontroller to solve simple problems using assembly language programming.
CO4	Design microcontroller based interfacing for various applications.
CO5	Demonstrate peripheral interfacing with advanced programming of microprocessors and microcontrollers for real-time applications.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Cont'd...

PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the basics of IoT technologies, design methodologies and network management protocols.
CO2	Evaluate the IoT deployment strategies and communication protocols.
CO3	Describe the concepts of sensors, interfacing methodologies and their application to IoT.
CO4	Develop programs for IoT Applications using Arduino and Raspberry Pi.
CO5	Develop IoT solutions for specific applications and perform data analytics.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Cont'd...

PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Ray Optics: Introduction to optoelectronics and its application, Basic optical laws and definitions, Total internal reflection, Numerical aperture, Ray propagation in step index fiber and graded index fiber.	8 Hours
Module-2	Wave Optics: Wave properties of light - Polarization, Interference, Diffraction; Transmission of light through wave guide - Maxwell's Equation; Losses - Attenuation, Dispersion, Bending Loss, Scattering.	10 Hours
Module-3	Optical Sources and Detectors: LED and Lasers - fundamentals; Light Emitting Diodes (LED): Materials for LED, Types of LEDs and their structure, Quantum efficiency, Output Power; Laser Diode: Laser fundamentals, Absorption and emission of radiation, Conditions for amplification by stimulated emission, Threshold condition for laser oscillation, Resonant frequencies, Quantum efficiency, Semiconductor laser; Photodiodes: PN, PIN, APD.	10 Hours
Module-4	Fiber Optic Components: Coupler and its classification, Splicer, Power loss in joining technique, Connector, Polarizer, Power coupled to a fiber.	5 Hours
Module-5	Fiber Optic Sensors: Classification of sensors, Intensity modulated sensors, Macro-bend, Micro-bending, Diffraction grating based IM sensors, Displacement sensors, Phase modulated sensor, Interferometric sensors, Fiber based Fabry-Perot interferometric sensors, Sagnac effect based optical gyroscope, FBG sensor, Phase & polarization modulation based fiber sensors, Fiber optic gyroscope, Distributed fiber optic sensors - OTDR & OFDR principles.	9 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the fundamentals, advantages and advances in optical communication systems.
CO2	Understand the basic operating principles of various optoelectronic devices.
CO3	Compare the characteristics of optical fibers and losses during signal transmission.
CO4	Explain the technical details of various LEDs, LASER, and detectors.
CO5	Describe different optical sensors and their application in different fields.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Transformers: Constructional features, EMF equation, Ideal and non-ideal transformers, Turns ratio, Equivalent circuit, Losses and efficiency, Parameter estimation through Open Circuit and Short Circuit test; Three Phase Transformers: Construction and types of connections (star-delta, delta-star, star-star, delta-delta).	10 Hours
Module-2	Principles of DC Machines: Construction, Modes of excitation (self, separately), EMF induced expression; DC Generators: No load characteristics for separately excited generator and shunt generator, Voltage build up process, Critical resistance and critical speed, Losses and efficiency.	8 Hours
Module-3	DC Motors: Principle of operation, Study of different characteristics, Speed armature current, Torque armature current, Speed torque for separately excited, shunt and DC series motor, Speed control and starting of DC shunt and series motors.	6 Hours
Module-4	Three Phase Synchronous Machines: Constructional features, Principle of operation as Alternator and Synchronous motor, Synchronous impedance and voltage regulation by synchronous impedance method, Synchronization of alternators; Torque expression and Phasor diagram for synchronous motor; Electrical power and mechanical power; Starting of synchronous motor.	8 Hours
Module-5	Three Phase Induction Motors: Constructional features of Squirrel Cage Rotor type and Slip Ring/Wound Rotor type of induction motors, Principle of operation, Concept of slip, Slip torque characteristics, Starting of Squirrel Cage Rotor type and Slip Ring/Wound Rotor type of induction motors, Speed control of induction motors; Single Phase Motors: Double field revolving theory. Split phase (capacitor start & run) and Shaded pole starting of single phase induction motors; Speed current, Torque current and speed torque, Characteristic for universal motors.	10 Hours
Total		42 Hours

4. <https://nptel.ac.in/courses/108/105/108105155/>: by Prof. T. K. Bhattacharya, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Perceive the equivalent circuit of single phase transformer, determine the circuit parameters, and efficiency using various tests.
CO2	Understand the constructional features and analyze the load/no-load characteristics of DC generator.
CO3	Explain the operating characteristics and speed control techniques of DC Motors.
CO4	Generalize the constructional features of synchronous machines and analyze the process of synchronization in industries.
CO5	Describe the operating principles, starting & speed control of 3-phase induction motors and different types of single phase motors.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Cont'd...

PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the architectural concepts of a digital computer, identify various functional units and describe their functionality, represent instructions in various formats, and solve problems based on addressing modes.
CO2	Perform various binary arithmetic operations using different techniques and represent floating point numbers & perform various operations on them.
CO3	Describe the working mechanism of the components of processing unit and discuss the techniques to enhance the performance of processing using pipelining.
CO4	Explain the working principle of Main memory, Cache memory and Virtual memory organization and solve numerical problems based on memory management.
CO5	Design assembly language programs for 8085/8086 microprocessors and differentiate among the techniques used for accessing I/O devices and standard I/O interfaces.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Module-#	Topics	Hours
Module-1	Generation of Electrical Energy: Basics of electrical generation sources - Thermal, Hydro, Nuclear; their layout, basic components, advantages & disadvantages; Renewable Energy: Wind, Solar; their layout, basic components; Grid connected renewable sources, operational issues.	8 Hours
Module-2	Transmission Lines & Substations: Components of transmission lines - conductors & supporting structures, insulators, air gaps, and shielding; DC & AC transmission lines, comparison, underground cables, design parameters, benefits of high-voltage transmission; Substation Equipment - transformers, regulators, circuit breakers, isolators, their relationship to system protection, maintenance & system control; digital substation equipment for modernization & reliability.	9 Hours
Module-3	Distribution System: Primary & secondary, overhead & underground, Consumers - residential, commercial, industrial; voltage classifications, common equipment; modernization & automation, intelligent electronic devices, outage management, customer information systems; Consumption: Wiring to the consumer's load, emergency generators, uninterruptible power supply (UPS), Systems to enhance reliable power service & their operating issues, Smart meters, service reliability indicators, common problems & solutions for large power consumers.	10 Hours
Module-4	System Protection: System vs. Personal protection, protection against equipment failures, faults on power lines, lightning strikes, inadvertent operations, other causes of system disturbances, Protective relays, Protection against faults, lightning strikes, minimization of major system disturbances; Personal protection & safe working procedures in and around high-voltage power systems; Common safety procedures and methods; Equipotential grounding, Ground potential rise, Touch potential, Step potential; precautions around high-voltage power lines, substations, and around the home.	8 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Interconnected Power Systems: Concept of Interconnection, Hierarchical Grid arrangements, Cascade Tripping, Islanding, Load dispatch center, use of SCADA (Supervisory Control and Data Acquisition) and EMS (Energy Management Systems) for reliable operation of large power systems.	7 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe various renewable & nonrenewable sources of energy for generation of electrical power.
CO2	Explain fundamental aspects of transmission systems and substation equipment.
CO3	Elaborate the components of a distribution systems and transmission of electrical power up to the consumers' premises.
CO4	Develop an understanding of the basics of electrical protection systems in terms of system protection and personal safety.
CO5	Articulate the concepts, advantages and challenges in operation of large interconnected power systems and role of energy management systems(EMS) for reliable operation of large power systems.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Cont'd...

PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain and apply matrix methods for solving a system of linear equations.
CO2	Describe orthogonal & projection in vector space and apply it to least square solution.
CO3	Identify and apply Eigen values and Eigen vectors to diagonalization.
CO4	Explain and apply Singular Value Decomposition and to obtain pseudo inverse of a matrix.
CO5	Develop algorithms and write programs to solve linear algebra problems on computers.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Type	Code	Fluid Mechanics	L-T-P	Credits	Marks
OE	18BS3T02		3-0-0	3	100

Objectives	The objective of this course is to study the properties and behavior of fluids including fluid statics, kinematics, dynamics, inviscid flow, flow of viscous fluids, measuring instruments and fluid motive devices.
Pre-Requisites	Basic knowledge of the material properties of solids, liquids and gases and some knowledge of calculus and differential equations are required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on engineering applications.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Fluid Properties and Fluid Statics - Density, Specific weight, Specific gravity. Viscosity, vapor pressure, compressibility; Pressure at a point, Pascal's Law and pressure variation with temperature, Density and altitude; Simple and differential manometers, Piezometer, Pressure gauges; Hydrostatic forces on submerged surface, Forces on horizontal and vertical submerged plane surfaces; Buoyancy and flotation, Archimedes' principle, Metacentric height, Stability of immersed and floating bodies.	9 Hours
Module-2	Introduction, Kinematics of fluid flow, Lagrangian and Eulerian descriptions, Conservation of mass -Continuity equation, Differential equation of continuity, Stream line, Path line, Streak lines and Stream tube, Reynolds number and Classification of fluid flow - Steady & unsteady, Uniform & non-uniform, Laminar & turbulent, Rotational & irrotational; One, Two and Three-dimensional flows.	8 Hours
Module-3	Dynamics of Inviscid flows, Surface and body forces, Derivation of Euler's equation and Bernoulli's equation, Applications of Bernoulli's Equation - Venturi meter, Orifice meter, Current meter, Pitot tube; Viscous flow in a pipe/duct - Head loss, Friction factor, Frictional loss in high Reynolds number flow, Effect of wall roughness, Moody chart & illustration by examples; Losses in pipe systems - Pipe entrance/exit, Expansion/contraction, Fittings, Valves, Water level, Velocity & discharge measurements.	9 Hours
Module-4	Brief discussion on acceleration of fluid particles, Continuity equation in 3D flow, Stream function, Velocity potential function; Dynamics of viscous fluids; Momentum balance equation, Control volume approach, Navier-Stokes equations in Cartesian form, Principles of Dimensional Analysis and Similarity, Notch and weir, Impact of Jet, and relevant equations.	8 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Construction and working principles of - Hydraulic turbines, Impulse turbines, Reaction and Mixed Flow turbines, Hydraulic pumps, Centrifugal pumps & positive displacement types, Characteristic curves of Hydraulic turbines (NHQ).	8 Hours
Total		42 Hours

- <https://nptel.ac.in/courses/112/105/112105269/>: by Prof. S. Chakraborty, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain and apply the principles of fluid mechanics to solve problems in hydro-statics.
CO2	Analyze different types of fluid flow and evaluate different flow parameters.
CO3	Apply the concepts of fluid dynamics for the flow measuring devices and pipe flows.
CO4	Analyze free surface and 3D flow characteristics and apply them to engineering problems.
CO5	Visualize the construction & working principles of various hydraulic machines.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Module-#	Topics	Hours
Module-1	Information Theory: Information and entropy, Entropy for discrete ensembles, Properties of entropy of a binary memory less source, Measure of information, Source coding, Shannon's noiseless coding theorem, Shannon-Fano coding, Entropy rate of a stochastic process.	8 Hours
Module-2	Source Coding and Decoding Techniques: Kraft-McMillan Inequality and Compact Codes, Huffman codes and uniquely detectable codes, Arithmetic Coding, Predictive Coding, Lempel Ziv coding.	9 Hours
Module-3	Channel Capacity: Markov Source, Joint and Conditional Information Measures, Properties of Joint and Conditional Information Measures and a Markov Source, Differential entropy, Channel models, Channel capacity, Channel coding, Information capacity theorem, the Shannon Limit Theorem, Channel capacity for MIMO systems.	9 Hours
Module-4	Channel Coding: Introduction to cyclic codes, Polynomials, the Division Algorithm for polynomials, Method for generating cyclic codes, Matrix description of cyclic codes, Burst error correction, Fire codes, Golay codes.	8 Hours
Module-5	Error Control Coding: Introduction to convolutional codes, Tree codes & Trellis codes, Polynomial description of convolutional codes, the Generating Function, Matrix description of convolutional codes, Viterbi decoding of convolutional codes.	8 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the concept of information and entropy of a source.
CO2	Explain the Shannon's theorem for coding and source coding techniques.
CO3	Analyze conditional information measure and Markov source.
CO4	Analyze different channels and calculation of channel capacity.
CO5	Apply channel coding techniques for error control.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

5. <https://docs.oracle.com/database/121/SQLRF/toc.htm>: Oracle SQL Reference

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the significance of database management system, its functional components, create E-R model and relational schema for databases of real world applications.
CO2	Construct queries using Relational Algebra, Relational Calculus, and perform various database operations using structured query language (SQL).
CO3	Design relational databases based on real-world requirements and normalize the designs using different normalization techniques.
CO4	Get an insight to storage structures, various indexing techniques and access methods using those indexes, and devise optimal query execution strategies for efficient query processing.
CO5	Resolve currency control issues in transaction processing, and recover a database to its current state in case of failures.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Cont'd...

PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Online Resources:

1. <https://india.oup.com/orcs/9780199475070/>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Learn ethical concepts which will enable them to effectively resolve ethical issues in their personal and professional lives.
CO2	Be aware of their duties and responsibilities as professionals towards their organization and society.
CO3	Gather primary knowledge on engineering ethics and its objectives, different parameters of enquiry and engineering as an experiment in society.
CO4	Be conscious about risk and safety while finding a solution to an engineering problem.
CO5	Become attentive of the different global ethical issues.

Program Outcomes Relevant to the Course:

PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Study of the characteristics of RTD and Thermistor.
2	Temperature sensing using semiconductor type temperature sensor.
3	Weight measurement using strain gauge Load cell.
4	LVDT and its signal conditioning for position/displacement measurement.
5	Pressure measurement using Bourdon tube and diaphragm type sensor.
6	Temperature measurement using thermocouple.
7	Flow measurement using turbine type flow sensor.
8	Level measurement using capacitive transducers.
9	Speed measurement using optical and variable reluctance type transducers.
10	Design of active 2nd order low pass filter.
11	Level measurement using capacitive sensor.
12	Design of Instrumentation amplifier.
13	Design of Phase sensitive detector.

Detailed Syllabus

Experiment-#	Assignment/Experiment
<i>Group A: Schematic, Layout and its Simulation (any five)</i>	
1	Design a schematic and simple layout for CMOS Inverter, parasitic extraction and simulation.
2	Design a schematic and simple layout for CMOS NAND gate, parasitic extraction and simulation.
3	Design a schematic and simple layout for CMOS NOR gate, parasitic extraction and simulation.
4	Design a schematic and simple layout for Full adder.
5	Design a schematic and simple layout for MUX, DeMUX.
6	Design a schematic and simple layout for D flip-flop.
7	Design a schematic and simple layout for simple and complex Boolean expressions.
8	Design a schematic and simple layout for dynamic logic implementation (Domino logic).
9	Design a schematic and simple layout for dynamic logic implementation (NORA logic).
10	Design an ALU or a 4-bit Microprocessor with limited instructions.
<i>Group B: HDL (Verilog/VHDL) for Digital Circuits and its Implementation on FPGA (any five)</i>	
11	Design, Test Bench Creation and Simulation of Full Adder and its FPGA Implementation with display of the sum on 7-Segment Display.
12	Design, Test Bench Creation and Simulation of Full Subtractor and its FPGA Implementation with display of the difference on 7-Segment Display.
13	Design, Test Bench Creation and Simulation of 4:1 Mux & 1:4 DeMux and its FPGA Implementation.
14	Design, Test Bench Creation and Simulation of 4 bit up/down Counter and its FPGA Implementation.

Cont'd...

Experiment-#	Assignment/Experiment
15	Design, Test Bench Creation and Simulation of 4 bit Shift Register and its FPGA Implementation.
16	Design of ADC & DAC and their FPGA Implementation.
17	Design of Traffic Light Controller and its FPGA Implementation.
18	Design of DC Motor and its FPGA Implementation.
19	Design of Stepper Motor and its FPGA Implementation.
20	Design of Real Time Clock and its FPGA Implementation.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the VLSI Design flow from start to finish.
CO2	Design and implement digital systems using different architectures of VHDL.
CO3	Design, implement, and investigate Inverter, combinational, and sequential logic circuits using CMOS technology.
CO4	Implement digital logic circuits in real time using FPGA.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Cont'd...

PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Fundamentals of Microprocessors & Microcontrollers Lab	L-T-P	Credits	Marks
PC	18EC1L10		0-0-2	1	100

Objectives	The objective of the course is to provide hands-on practice on programming of different microprocessors and microcontrollers and their interfacing with external devices.
Pre-Requisites	Basic analytical & logical understanding including basic knowledge and usage of Digital Electronics is required.
Teaching Scheme	Regular laboratory experiments to be conducted using hardware and software tools under the supervision of the teacher; the experiments shall consist of programming assignments.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Program for arithmetic operations using 8085.
2	Program for finding the largest and smallest from a set of numbers using 8085.
3	Program for arranging numbers in ascending and descending order using 8085.
4	Programs for 16 bit arithmetic operations using 8086.
5	Programs for Sorting and Searching (using 8086).
6	Programs for String manipulation operations (using 8086).
7	Interfacing ADC and DAC.
8	Parallel Communication between two MP Kits using Mode-1 and Mode-2 of 8255.
9	Programming using Arithmetic, Logical and Bit Manipulation instructions of 8051 microcontroller.
10	Programming and verifying Timer, Interrupts and UART operations in 8051 microcontroller.
11	Interfacing and Programming of Stepper Motor and DC Motor Speed control.
12	Programming and verifying Timer, Interrupts and UART operations in 8051 microcontroller.
13	Communication between 8051 Microcontroller kit and PC.
14	A design problem using 8051 (such as, multi-parameter data acquisition system, voltmeter, power meter, frequency counter, traffic simulation, digital clock, etc.)

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the fundamentals of evolution, operating concept, and assembly language programming & instruction sets of 8086 Microprocessor.
CO2	Develop and apply assembly language programs using loop, branch, arithmetic, logical, shift, rotate, array & String operations.
CO3	Develop simple assembly level programs such as finding largest/smallest numbers, check existence of data, etc.
CO4	Experiment with assembly level programming of 8051 microcontroller & its functions for various applications.
CO5	Analyze the modes of operation of 8255 PPI and its interfacing with peripheral devices.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Soft Skills & Interpersonal Skills Lab	L-T-P	Credits	Marks
HS	18HS1L02			0-0-4	2

Objectives	The objectives of this laboratory course is to practice language skills to become effective communicators by addressing issues like speaking inhibitions. The lab comprises of individual and team activities based on the four skills of language (LSRW).
Pre-Requisites	Basic knowledge of English grammar and the ability to speak, read, and write using the English language is required.
Teaching Scheme	Regular laboratory classes with various tasks designed to facilitate communication through pair and/or team activities with regular assessments, presentations, discussions, role play, audio-visual supplements, writing activities, business writing practices and vocabulary enhancement.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Develop the skills to use English language for effective communication.
CO2	Utilise function of language in context of formality, appropriateness and sensitive issues.
CO3	Formulate and structure sentences using grammatically correct English.
CO4	Compose clear and effective business messages for specific purposes.
CO5	Build up a strong personality and develop skills for efficient public speaking.

Program Outcomes Relevant to the Course:

PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Cont'd...

PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Acceleration Measurement: Piezoelectric transducers - Basic principle, equivalent circuit, frequency response, charge amplifier; Accelerometers: Basic principle & frequency response, MEMS Accelerometer, Gyro Accelerometer and their applications; Miscellaneous Measurements: Level measurements using floats, Hydrostatic pressure gauge, Capacitive type principles, Ultrasonic and Gamma ray type level indicators.	10 Hours
Module-2	Humidity Sensor: Capacitive & Resistive types; pH and Liquid Conductivity Measurement: Basic principles; Viscosity Measurement: Basic principles, Problems based on level, Hydrostatic pressure measurement; Chemical Sensors: For gas and humidity measurements - electronic (resistive, capacitive, FET), electro-chemical, intelligent ("smart") sensor systems & their structure, properties & applications, primarily data processing, diagnostics and auto-calibration.	10 Hours
Module-3	Signal Conditioning Elements: Deflection bridges - design of resistive and reactive bridges, push-pull configuration for improvement of linearity and sensitivity; Amplifiers: Operational amplifiers - Ideal and non-ideal performances, Inverting, Non-inverting and Differential amplifiers, Instrumentation amplifier, Isolation amplifier, Analog filters, Charge amplifier design, AC carrier systems, Phase sensitive demodulators and its applications.	10 Hours
Module-4	Data Acquisitions and Conversion: Introduction, Objective of DAS, Single channel DAS, Multi channel DAS, Data Loggers, Digital Transducer; Signal Processing Elements: ADC (Successive approximation, dual slope, ramp, flash type) DAC (R-R and R-2R ladder), Sensitive and resolutions of ADC and DAC; Computer and microcontroller systems, Microcontroller and computer software (general idea).	7 Hours
Module-5	Data Presentation Elements: Pointer-scale indicators, Digital display principles, Light-emitting diode (LED) displays, Liquid crystal displays (LCDs), Electroluminescence (EL) displays, Chart recorders, Paperless recorders, Laser printers.	5 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Measure acceleration & level using different types of accelerometers & level sensors.
CO2	Describe the principles and applications of humidity and chemical sensors.
CO3	Analyze signal conditioning elements like AC/DC bridge and OpAmps to get the output.
CO4	Understand various data acquisition & signal processing elements used in industry.
CO5	Present the measured data using various presentation elements in user-friendly manner.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Signals & Systems: Introduction to Signal, Classification, Convolution of two signals (graphical & analytical); Introduction to System, Classification, Continuous-time & Discrete-time LSI system, System representation through differential & difference equations, Response of LSI system, Convolution Integral, Convolution Sum, Correlation of Discrete-time signals & its properties.	10 Hours
Module-2	Discrete Time Signals: Z-Transform, Region of convergence, Properties of Z-transform, Inverse Z-transform (power series & partial fraction methods); Analysis of LSI systems: causality and stability using Z-transform, pole-zero concept and pole-zero cancellation, transient and steady state response; Unilateral Z-transform and its properties, solution of difference equations.	8 Hours
Module-3	Discrete Fourier Transform: Basics of Discrete Time Fourier Transform (DTFT), frequency domain sampling and reconstruction of discrete time signals; Discrete Fourier Transform (DFT) and its properties; Linear filtering (overlap add method and overlap save method); Efficient computation of DFT: Fast Fourier Transform (FFT) Algorithm (Radix-2 DIT and Radix-2 DIF).	8 Hours
Module-4	Structure for Realization of Discrete Time Systems: Structure for IIR systems - Direct Form I, Direct Form II, Cascade and Parallel Form, Signal Flow Graph and Transposed Structure; Structure for FIR systems: Direct form, cascade form and frequency sampling structure.	8 Hours
Module-5	Design of Digital Filters: Causality and its implication; Design of FIR filters: symmetric and anti-symmetric, design of Linear Phase FIR filters using Windowing technique and frequency sampling technique; Design of IIR Filters from analog filters using Impulse invariance and bilinear transformation techniques.	8 Hours
Total		42 Hours

4. <https://ocw.mit.edu/courses/mechanical-engineering/2-04a-systems-and-controls-spring-2013/lecture-notes-labs/>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand and apply basic concepts of control system to develop mathematical model of various physical systems in engineering and also study effect of feedback on system characteristics.
CO2	Use standard test signals to determine performance characteristics of first and second-order systems and determine the stability using time domain techniques.
CO3	Identify the methods of frequency domain analysis and apply it to determine different types of stability in frequency domain.
CO4	Differentiate between Transfer Function and State-Space approach of describing a system and understand the design of conventional controllers used in industry.
CO5	Understand different types of control components and its design for reliable and efficient application in industry.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Cont'd...

PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Vector Analysis: Scalars, Vectors, Unit vector, Scalar & Vector fields, Co-ordinate systems and transformation, Cartesian co-ordinates, Cylindrical co-ordinates, Spherical co-ordinates and Application; Vector Calculus: Line, Surface and volume integrals, Del operator, Gradient of a scalar, Divergence of a vector and Divergence theorem, Curl of a vector and Stoke's theorem, Laplacian and Applications.	8 Hours
Module-2	Electrostatic Fields: Coulomb's Law, Electric field intensity, Electric fields due to point, line, surface and volume charge, Electric flux density, Gauss's Law - Maxwell's equation, Application of Gauss's Law, Electric potential, Potential due to a line, Surface and volume charge; Conservative field, Relationship between E & V - Maxwell's equations, An Electric Dipole, Dipole moment, Expression of E due to an electric Dipole, Energy density in the Electrostatic fields; Conductors: Current and Current density, Continuity equation, Point form of Ohm's law, Resistance of a conductor, Relaxation time; Dielectrics: Polarization, Dielectric strength, Capacitance, Boundary conditions, Poisson's and Laplace's equation, Uniqueness Theorem, General procedures for solving Laplace's equation.	12 Hours
Module-3	Magnetostatic Fields: Magnetic field Intensity, Biot-Savart's law & its application, Ampere's Circuital Law & its application, Magnetic scalar & vector potentials, Magnetic Boundary conditions, Application; Force in Magnetic Fields: Force on a moving Point charge, Force between two straight, Long and parallel conductors carrying currents.	8 Hours
Module-4	Faraday's Law and Lenz's Law: Statically induced EMF, Dynamically induced EMF, Displacement current density and displacement current, Physical significance of displacement current; Maxwell's Equations for Static fields, Maxwell's equations for Time varying fields: Maxwell's Equation for Harmonic varying fields; Maxwell's Equation for Good conductors, Maxwell's Equation for Free space; Retarded Potential, Average power density, Poynting vector and Poynting Theorem(Integral & Point forms), Applications.	8 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Wave Propagation: Electromagnetic wave, Electromagnetic wave equation in phasor form, Intrinsic impedance, The loss tangent, Uniform plane waves, Uniform plane wave in lossy dielectric, Perfect dielectric, Free space and in Good conductors, Skin depth, Transmission lines, Transmission line equations, Characteristic impedance, Wave form distortion, Distortionless line.	6 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain various co-ordinate systems and solve problems involving vector calculus.
CO2	Describe electrostatic fields, their characteristics and associated parameters.
CO3	Visualize magneto-static fields, their characteristics and associated parameters.
CO4	Analyze and apply Maxwell's equations to various electromagnetic fields.
CO5	Interpret the propagation of EM waves through different mediums.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Cont'd...

PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction: Embedded Systems, Processor embedded into a system, Embedded hardware units and devices, Embedded software, Examples, Embedded SoC and use of VLSI, Design process and examples, Classification of embedded systems, Skills required for a designer; Typical Embedded System: Core, Memory, Sensors & Actuators, Communication interface, Embedded firmware.	8 Hours
Module-2	Characteristic & Quality Attributes: Application and domain specific embedded systems; Designing with Microcontrollers, Factors to consider for selecting a controller; Hardware Software Co-Design and Program Modeling: Fundamental issues in Hardware Software Co-Design, Computational models in embedded design, Introduction to UML, Hardware Software Trade-offs.	9 Hours
Module-3	Embedded Hardware Design & Development: Analog Electronic Components, Digital Electronic Components, VLSI and Integrated Circuit Design, Electronic Design Automation (EDA) Tools; Embedded Firmware Design & Development: Design Approaches, Development Languages.	8 Hours
Module-4	Real Time Operating System (RTOS) based Design: Operating system basics, Types of operating systems, Tasks, Process & Threads, Multiprocessing & Multitasking, Task Scheduling, Task Communication, Task Synchronization, Choosing an RTOS.	8 Hours
Module-5	Integration & Testing: Integration of Hardware & Firmware, Board Power up; Embedded System Development Environment: Integrated Development Environment (IDE), Types of files generated on cross-compilation, Disassembler/Decompiler, Simulators, Emulators & Debugging, Target Hardware Debugging; Product Enclosure Design & Development: Tools, Development Techniques, Embedded Product Development Life Cycle (EDLC): Definition and Objectives of EDLC, Phases of EDLC, EDLC Approaches (Modeling the EDLC).	9 Hours
Total		42 Hours

2. <https://nptel.ac.in/courses/108102045/>: by Prof. S. Chaudhary, IIT Delhi

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the fundamental building blocks of a typical embedded system.
CO2	Explain the quality attributes of embedded systems and the co-design approach for embedded hardware and firmware development.
CO3	Explain the elements of embedded hardware and their design principles and development steps.
CO4	Understand the need for an operating system and internals of RTOS based embedded firmware design.
CO5	Integrate, test, and manage an embedded system development life cycle (EDLC).

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Cont'd...

PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the fundamentals of Virtual Instrumentation developments and design.
CO2	Apply programming skills for Virtual Instrumentation system design.
CO3	Correlate data acquisition & communication for design of indigenous virtual instruments.
CO4	Demonstrate the use of virtual instrumentation tool sets.
CO5	Design and develop virtual instrumentation systems for specific industrial applications.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Cont'd...

PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Power Station Engineering	L-T-P	Credits	Marks
OE	18EE3T39			3-0-0	3

Objectives	The objective of this course is to study various aspects and working of principles of power plants based on different fuels, their cost-benefit analysis, safety, and environmental issues.
Pre-Requisites	Basics of mechanical engineering, thermodynamics, and basic electrical engineering are required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required; sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction: Sources of Energy and Generation, Indian Energy Scenario; Prediction of Load: Connected Load, Maximum Load, Demand Factor, Average Load, Load Factor, Load Duration Curves, Diversity Factor, Choice of Type of Generation, Capacity Factor, Reserve Factor, Plant Use Factor, Base Load, Intermediate Load, Peak Load Plants; Economics of Power Generation: Costs - Construction cost, Fixed cost, Costs for energy, Depreciation of plant, Fuel cost; Economic scheduling principle, Annual operating costs, Effect of Load Factor on cost, Tariff.	9 Hours
Module-2	Hydro Electric Power Station: Selection of site, Hydrological cycle, precipitation, run-off, hydrograph, flow duration & mass curves, Estimation of water held by a dam, Storage & Pondage, Earthen & Concrete Dams; Turbines: Kaplan & Francis Turbine, Pelton wheel, Speed & Pressure Regulation, Work done & Efficiency; Arrangement & location of Hydroelectric Station: Catchment area, Reservoir, Dam, Head Gate, Spillways, Pen stock, Surge Tanks, Scroll case, Draft tubes & Tail Race, Power House, Pump storage plant.	10 Hours
Module-3	Nuclear Power Station: Fission & Fusion, Principle of Nuclear Energy, Reactor Construction, Controlled Chain Reaction, Power Reactors: Pressurized Water Reactor, Boiling Water Reactor, Pressurized Heavy Water Reactor, CANDU Reactor, Gas Cooled & Liquid Metal Cooled Reactors; Operational Control of Reactors, Breeder, Location & layout of nuclear power plant.	8 Hours
Module-4	Thermal Power Station: Selection of site; Main parts & working of a Steam Station, Overall Block Diagram indicating the air circuit, coal & ash circuit, water & steam circuit, Types of steam turbines, Ash & coal handling system, High Pressure and High capacity water tube boilers, Super heaters, De-Super heater, Re-heater, Air Pre-heater; Ultra mega power project, Fluidized bed boiler technology.	8 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Fuel handling plant, water treatment plant, Draft System: Natural, Induced, Forced & Balanced Draft, ID fan, PA fan, FD fan, Chimney, Condenser, Feed water heaters, Evaporators, Make-up water, Bleeding of steam, Cooling water system; Electrostatic precipitator, Water treatment plant, Turbine, Fluidized bed combustor, Economizer, Generators, Dust collector system, Condenser, Cooling tower, Feed water pump.	7 Hours
Total		42 Hours

- <https://nptel.ac.in/courses/112/106/112106133/>: by Prof. J. M. Mallikarjuna, Prof. U. S. P. Shet, and Prof. T. Sundararajan, IIT Madras

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Estimate loads, generation patterns, their behavior and cost benefit analysis of different types of power stations.
CO2	Describe the operation of hydro power plant, different heads, and turbine modeling.
CO3	Evaluate the performance of nuclear power station and realize associated problems.
CO4	Explain the operation of the thermal power plant and related mechanical functions.
CO5	Identify and describe different components of a thermal power plant.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Cont'd...

PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply simplex method to solve linear programming problems.
CO2	Explain the concepts behind simplex method and apply it to sensitivity analysis.
CO3	Apply integer programming and convex programming methods in optimization problems.
CO4	Explain the concepts and conditions of non-linear programming problems and its application.
CO5	Solve constrained optimization problems by applying advanced optimization techniques.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction: Concept and Importance of Organizational Behaviour; Learning-Nature of Learning, Components of learning, Learning Cycle, Theories of Learning; Personality - Concept, Determinants of Personality, Personality Traits, Personality and OB.	9 Hours
Module-2	Perception and Motivation: Perception - The Concept of Perception, The perceptual process, Importance of Perception in OB; Motivation: Nature and Importance, Herzberg's Two Factor Theory, Maslow's Need Hierarchy Theory, Alderfer's ERG Theory.	8 Hours
Module-3	Organizational Behaviour Process: Communication-Concept, Importance, Types, Gateways and Barriers to Communication; Communication as a tool for improving Interpersonal Effectiveness. Groups in Organizations: Nature and Types of Groups, Group Cohesiveness and Group Decision-making with Managerial Implications, Effective Team Building. Leadership: Leadership and Management, Theories of Leadership, Conflict-Nature of Conflict and Conflict Resolution.	9 Hours
Module-4	Organizational Culture and Human Resource Management: Organizational Culture: Concept of Organizational Culture and Organizational Effectiveness; Human Resource Management: Selection, Orientation, Training and Development, Performance Appraisal.	8 Hours
Module-5	Organizational Change: Importance of Change, Planned Change and OB techniques; International Organizational Behavior: Cultural Differences and Similarities, Individual and Interpersonal Behavior in Global Perspective, Trends in International Business.	8 Hours
Total		42 Hours

Text Books:

- T1. K. Davis, *Organisational Behaviour*, 9th Edition, McGraw-Hill, 1992.
- T2. K. Aswathappa, *Organisational Behaviour*, 12th Rev. Edition, Himalaya Publishing House, 2016.

3. <https://www.studocu.com/en/search/organizational-behaviour>: by different universities

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the developments in the field of OB and the micro & macro approaches inside organizations.
CO2	Analyze and compare different models used to explain individual behaviour related to motivation, learning, perception and personality.
CO3	Identify the processes used in developing communication, interpersonal relations and resolving conflicts.
CO4	Explain the role of group dynamics, demonstrate skills required for working in groups, team building and various leadership styles.
CO5	Explain the need of organizational culture and identify the process and barriers for implementing organizational change.

Program Outcomes Relevant to the Course:

PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Digital Communication Systems: Source, Line coder, Multiplexer, Regenerative repeater, Sampling in transmitting multiple band-limited signals, Signal reconstruction, Quantization of signals (uniform & non-uniform), PCM system, Companding, μ -law and A-law compression, Input-output characteristics, T1 digital system, Multiplexing T1 lines - The T2, T3 and T4 lines, Line Coding, DPCM, DM and ADM.	9 Hours
Module-2	Noise in PCM and DM: Quantization noise, Output signal power, Thermal noise, Output SNR in PCM, Quantization noise in Delta Modulation, Output signal power, Output SNR, Comparison with PCM and DM; Digital Modulation Techniques: Concept of geometric interpretation of signals, Schwarz's inequality, Concepts of orthogonality and orthonormality, Generation, Transmission, Reception, Spectrum, Geometrical representation and probability of symbol error of ASK, BPSK, DPSK, QPSK, QAM, M-ary PSK, BFSK, M-ary FSK, and Minimum Shifting Keying (MSK).	9 Hours
Module-3	Signal Detection: A base band signal receiver, Peak signal to RMS noise output voltage ratio, Probability of error, Optimum threshold, Optimum receiver (base band & pass band), Optimum filter transfer function, Optimum filter realization using Matched filter, Probability error of the matched filter, Optimum filter realization using correlator and ML Detector.	8 Hours
Module-4	Principle of Digital Data Transmission: Line Coding - PSD of various line codes, Polar signaling, Constructing a DC Null in PSD by pulse shaping, On Off signaling, Bipolar signaling; Pulse shaping – ISI and effect, Nyquist first criterion for zero ISI; Scrambling, Digital receiver, Equalizers, Timing extraction, Detection error and Eye Diagram.	8 Hours
Module-5	Multiple Access Techniques: FDMA, TDMA, CDMA, OFDM, OFDM transmitter and receiver, Orthogonality of sub-carriers, Concept of cyclic prefix, OFDM block-diagram, MIMO system, MIMO system solutions, MIMO system model, MIMO capacity on Fading channels.	8 Hours
Total		42 Hours

3. <https://nptel.ac.in/courses/108/102/108102120/>: by Prof. A. Dixit, IIT Delhi

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the sampling theorem, practical issues related to sampling, signal reconstruction, quantization, encoding along with applications.
CO2	Apply digital modulation & demodulation techniques considering bandwidth, SNR and power spectral efficiency.
CO3	Design optimum receivers for pass band and base band communications and compare the performance of correlator receiver with matched filter reception.
CO4	Visualize practical issues related to digital data transmissions such as pulse shaping, line coding, repeater circuits, equalizer and timing extraction.
CO5	Describe different types of multiple access techniques, OFDM transmission and reception along with MIMO System.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explore principles behind various types of operating systems, system components, system calls, protection mechanisms and services.
CO2	Explain different schedulers, scheduling policies, and design new scheduling algorithms for real life problems.
CO3	Describe the significance of process synchronization through classical synchronization problems and deadlock handling mechanisms.
CO4	Describe the working principle of main memory, cache memory and virtual memory organization and solve memory related problems.
CO5	Articulate secondary storage management, and analyze the performance of various disk scheduling algorithms.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Module-#	Topics	Hours		
Module-1	Introduction to Python: Features of Python, Executing a python program, Interactive and non-Interactive modes, Basic syntax, Data types, Variables, Literals, Input/output statements, Keywords, Identifiers, Operators, Precedence & associativity, Expressions, Control statements.	8 Hours		
Module-2	Arrays, Strings, and Lists: Operations, Slicing, Built-in list function, List comprehension, Tuples - Introduction, Accessing elements, Operations using built-in tuple functions, Dictionaries - Introduction, Accessing values in dictionaries, Built-in dictionary functions, Sets, Function, Recursion; Modules: Creating modules, Import statement, Packages.	10 Hours		
Module-3	Object Oriented Programming: Features, Classes & objects, Creating class & object, Using a class, Methods; Inheritance: Types of inheritance, Overriding methods, Encapsulation & information hiding, Polymorphism, Operator overloading, Method overloading & overriding, Abstract method & class; Exception Handling: Errors, Types of exception, try, except, and finally, assertion.	9 Hours		
Module-4	File Handling: Types of files, Opening & closing, Reading & writing, Binary files; Command line arguments; Database Connectivity: Introduction, Connections, Executing queries, Transactions, SQLDB database connection parameters, Insert, Update, Delete.	9 Hours		
Module-5	Regular Expression: Match function, Search function, Matching vs. Searching, Quantifiers, Pattern; CGI: Introduction, Architecture, CGI environment variables, GET & POST methods, Cookies, File upload; Graphical User Interface: GUI toolkits, Creating GUI widgets with Tkinter, Creating layouts, Radio buttons, Checkboxes, Dialog boxes.	6 Hours		
Total				42 Hours

2. <https://help.uis.cam.ac.uk/service/help-support/training/downloads/course-files/programming-student-files/python-courses/>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explore Python syntax and use Python flow control to solve simple problems.
CO2	Implement knowledge of functions and different data structures like list, tuple, and dictionary.
CO3	Develop applications using object oriented programming concepts in Python.
CO4	Apply the concept of file handling and database connectivity in real life problems.
CO5	Implement regular expressions and develop GUI based Python applications.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Instrumentation Devices & Systems Lab	L-T-P	Credits	Marks
PC	18EI1L04		0-0-2	1	100

Objectives	The objective of this laboratory course is to get practical exposure in designing of different measurement systems using various sensors, programming in LabVIEW, and acquiring the sensor data using DAQ card
Pre-Requisites	Knowledge of transducers & sensors, and LabVIEW is required. Topics taught in IDS theory class are essential to conduct the experiments.
Teaching Scheme	Regular laboratory experiments conducted under supervision of the teacher. Demonstration will be given for each experiment in the pre-lab session.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Design of a temperature measurement system with thermocouple providing cold junction compensation using LabVIEW and DAQ.
2	Design of a microcontroller based storage & display device.
3	Design of LVDT and its signal conditioning circuit using LabVIEW and DAQ.
4	Design of load cell using strain gauge and LabVIEW and DAQ.
5	Design of an orifice type flow meter with diaphragm type differential pressure transducer with capacitive sensing scheme.
6	Design of a piezoelectric accelerometer with charge amplifier configuration.
7	Design of active low pass, high pass & band pass filters.
8	Design of a stepper motor drive.
9	Design of Regulated power supply unit.
10	Embedded real-time system design using ARM controller.
11	Design of PID controller using LabVIEW and hardware design.
12	Design of pressure sensor using LabVIEW and DAQ.
13	Design of sound measurement using LabVIEW and DAQ.

2. <https://nptel.ac.in/courses/108/105/108105064/>: by Prof. A. Barua, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Design virtual instrumentation system for temperature measurement using LabVIEW and DAQ.
CO2	Design real-time position measurement using LVDT, LabVIEW and DAQ.
CO3	Implement real-time measurement systems using acceleration, pressure, flow sensors, LabVIEW and DAQ.
CO4	Design stepper motor drive, active low pass, high pass & band pass filters.
CO5	Design embedded real-time systems using ARM controller.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Type	Code	Introduction to Digital Signal Processing Lab	L-T-P	Credits	Marks
PC	18EC1L09			0-0-2	1

Objectives	The objective of the lab course is to perform basic signal processing operations such as linear & circular convolution, auto & cross correlation, frequency analysis, and implementation of FIR & IIR filters using MATLAB.
Pre-Requisites	Basic knowledge of Signals & systems and MATLAB programming are required to conduct the experiments.
Teaching Scheme	Regular laboratory experiments conducted under supervision of the teacher. Demonstration along with associated safety measures will also be explained.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Generation of various types of waveforms (sine, cosine, square, triangular etc.) using MATLAB.
2	Linear convolution of sequences (without using the inbuilt conv. function in MATLAB).
3	Computation of autocorrelation of a sequence, cross correlation of two sequences using MATLAB.
4	Computation of the power spectral density of a sequence using MATLAB.
5	Finding the circular convolution of a periodic sequence using DFT and IDFT in MATLAB.
6	Circular convolution of two sequences and comparison of the result with the result obtained from linear convolution using MATLAB.
7	Convolution of long duration sequences using overlap add, overlap save method using MATLAB.
8	Implementation of FFT algorithm by decimation in time (DIT) and decimation in Frequency (DIF) using MATLAB.
9	Design and implementation of FIR (lowpass and highpass) Filters using windowing techniques (rectangular window, triangular window and Kaiser window) using MATLAB.
10	Design and implementation of IIR (lowpass and highpass) Filters (Butterworth and Chebyshev) using MATLAB.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the generation of various elementary signals in MATLAB.
CO2	Perform basic signal processing operations like convolution, correlation etc.
CO3	Analyze the spectrum of discrete time signals using DFT.
CO4	Implement various efficient computation techniques using FFT-DIT and FFT-DIF algorithms.
CO5	Design FIR and IIR filters using various techniques.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PC	18EE1L03		0-0-2	1	100

Objectives	The objective of the course is to understand and practice modeling, simulation, and implementation of a physical dynamical system along with an insight to the design of controllers and compensators in modern control system applications.
Pre-Requisites	Knowledge of Dynamic equations of physical systems, Basic Electrical Engineering, Laplace Transform, and Matrix Theory is required.
Teaching Scheme	Regular laboratory experiments to be conducted using hardware and software tools under the supervision of teachers. Demonstration will be given for each experiment in the pre-lab session.

Evaluation Scheme

10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Study of Position control system using DC Servo motor and determination of its transfer function.
2	Study the characteristics of Synchro Transmitter and Receiver.
3	Observe the time response of a second order process with P, PI and PID controller using process control simulator.
4	Analyze a 2nd order system by plotting its step response using simulation & programming.
5	Verify the effect of P, PI, PD and PID Controller of a 2nd order system using simulation & programming.
6	Study of speed-torque characteristics of two phase ac servomotor and determination of its transfer function.
7	Study the interrelationship between Transfer function and State Space model of a system using simulation & programming.
8	Plot the root locus of a given transfer function using simulation & programming.
9	Study of frequency response of compensator networks and analysis of system stability with compensator using simulation & programming.
10	Study the frequency response of lead, lag compensator network.
11	Study and validate the controllers (ON/OFF and PID) for a temperature control system.
12	Obtain reduced order model of a higher order system using simulation & programming.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Evaluate the parameters and transfer function of various control components and interpret their application in real world.
CO2	Understand the design of compensators and recognize their use for various applications in interdisciplinary domain.
CO3	Classify between linear and non-linear control actions used in a closed loop system and relate the use of appropriate control scheme for industrial applications.
CO4	Differentiate between Transfer Function and State-space representation of any system dynamics using software tools.
CO5	Analyze and compare the performance of first and second order systems in time domain using hardware and software tools.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Type	Code	Skill Lab & Project - I	L-T-P	Credits	Marks
PJ	18EI6L03		0-0-4	2	100

Objectives	The objective of the laboratory course is to impart additional skills in circuit analysis using SPICE tools, PCB design using EDA tools, grounding & shielding, signal conditioning, micro-controller interfacing, etc., leading to development of real-life IoT applications using latest technologies and various sensors & hardware/software tools.
Pre-Requisites	Knowledge of analog/digital electronics, micro-controller & computer programming, and transducer & measurement systems etc., are required.
Teaching Scheme	Regular laboratory classes with the use of different software and hardware tools as per the requirement. Projects shall be executed by guidance & regular interaction with the assigned faculty mentor.

Detailed Syllabus

Experiment-#	Assignment/Experiment
<i>Design of DC Power Supply (Compulsory)</i>	
1	Design and analysis of a DC power supply circuit with +12V/1A, -12V/1A, +5V/1A, +9V/1A and variable outputs using SPICE simulation software.
2	Design of Printed Circuit Board (PCB) layout using Open Source software
3	Fabrication of DC power supply circuit using chemical etching technique.
4	Component placing of the DC power supply circuit using proper soldering/de-soldering methodology.
5	Design and development of a signal conditioning circuit with the following specifications.
<i>Design of Microcontroller based System (Any One)</i>	
6	Design and development of a discrete state process control prototype using suitable sensors and microcontroller.
7	Design and development of a 4 digit display unit using 7-segment display and microcontroller for the given application.
8	Design and development of a stepper motor control driver circuit.
9	Design and development of a motion detector assembly using sensor and microcontroller.
10	Design and development of a temperature monitor and control system using microcontroller.
11	Design and development of AC Over-Under Voltage Protection circuit using microcontroller.
12	Design and development of alpha-numeric display using LCD and microcontroller.
13	Design and development of a real-time monitoring system using digital sensor, microcontroller and GSM modem.

Cont'd...

Experiment-#	Assignment/Experiment
<i>Project Work</i>	
14	Interfacing: (Microcontroller with full TCP/IP stack capability):
15	Embedded Linux: (Embedded Single Board Computer)

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyze the circuits using SPICE tools and implement on PCB using EDA tools.
CO2	Do proper soldering and effectively troubleshoot following the correct grounding & shielding methodologies.
CO3	Design and implement the signal conditioning and micro-controller interfacing circuits.
CO4	Apply the micro-controller programming to realize different applications.
CO5	Understand IoT with regards to its hardware & software components, interfacing of I/O devices, sensors & communication modules, and remote monitoring of data and control devices.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Cont'd...

PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

List of Electives

Code	Elective # and Subjects
<i>Professional Elective - III</i>	
18EI2T53	PLC, Distributed Control System & SCADA
18EI2T31	Bio-medical Electronics
18EE2T14	Soft Computing Techniques
<i>Professional Elective - IV</i>	
18EC2T01	Advanced Electronic Circuits
18EC2T23	Adaptive Signal Processing
18EI2T43	Industrial Instrumentation
<i>Professional Elective - V</i>	
18EI2T47	MEMS & Sensor Design
18EC2T13	Digital Image & Video Processing
18EE2T07	Advanced Control Systems
18EI2T27	Analog VLSI Design
<i>Professional Elective - VI</i>	
18EC2T57	Satellite Communication Systems
18EC2T20	Mobile Communication & Networks
18EI2T44	Industry 4.0
<i>Open Elective - III</i>	
18EE3T40	[EEE] Renewable Energy Systems
18BS3T12	[BSH] Stochastic Processes
18BS3T13	[BSH] Project Management
18EC3T27	[ECE] Advanced Communication Systems
18EC3T42	[ECE] Speech & Audio Processing
18CS3T15	[CSE] Internet Technology & Applications
18CS3T16	[CSE] Introduction to Machine Learning
<i>Open Elective - IV</i>	
18EE3T33	[EEE] Energy Studies
18BS3T18	[BSH] Simulation & Modeling
18BS3T20	[BSH] Entrepreneurship Development
18EC3T38	[ECE] Mixed Signal Design
18EC3T44	[ECE] Fiber Optic Communication
18EC3T22	[ECE] Robotics & Robot Applications
18CS3T23	[CSE] Big Data Analytics
18CS3T24	[CSE] Artificial Intelligence

Note: *Open Electives* are choice-based courses offered by other departments as indicated within brackets.

Type	Code	Industrial Automation & Control	L-T-P	Credits	Marks
PC	18EI1T05			3-0-0	3

Objectives	The objective of this course is to study the principles, operation, tuning, configuration and applications of process control elements including PLC and DCS for industrial uses and real time programming.
Pre-Requisites	Knowledge of basic electrical engineering and control system is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Process Control: Introduction to Process Control, Process Definition, Feedback Control; Controller Types: Discontinuous, Continuous, and Composite; PID Controller Tuning: Zeigler-Nichols Tuning Method, Process Reaction Curve; Digital PID Controllers: Position and Velocity algorithm.	10 Hours
Module-2	Final Control Elements: Pneumatic systems - Flapper nozzle system and its characteristics, I/P converter and pneumatic actuators; Electrical actuators: Solenoids, motors, principle of stepper motors, elements of power electronic devices and driver circuits, hydraulic actuators; Control valve: Types of control valve, control valve sizing, cavitation and flashing.	8 Hours
Module-3	Special Control Structures: Cascade Control, Feed forward Control, Feed forward-Feedback Control Configuration, Ratio Control, Selective Control and Adaptive Control Configuration.	8 Hours
Module-4	Industrial Automation: Programmable Logic Controllers: Introduction, Principles of operation, Architecture, Programming (Programming Languages, Ladder Diagram, Boolean Mnemonics); Distributed Control System: Distributed vs. Centralized, Advantages, Functional Requirements, System Architecture, Distributed Control Systems (DCS), Communication options in DCS.	10 Hours
Module-5	Real-time Programming: Multi-tasking, Task Management, Inter-task Communication, Real-time Operating System.	6 Hours
Total		42 Hours

Text Books:

- T1. S. Bhanot, *Process Control: Principles and Applications*, 1st Edition, Oxford University Press, 2008.
- T2. K. Kant, *Computer-Based Industrial Control*, 2nd Edition, PHI, 2009.
- T3. C. D. Johnson, *Process Control Instrumentation Technology*, 8th Edition, Pearson, 2014.
- T4. D. R. Coughnowr, *Process System Analysis and Control*, 3rd Edition, McGraw Hill, 2009.

Reference Books:

- R1. J. Stenerson, *Industrial Automation and Process Control*, 3rd Edition, Prentice Hall, 2003.
- R2. C. A. Smith and A. B. Corripio, *Principles and Practice of Automatic Process Control*, 3rd Edition, John Wiley & Sons, 2006.

R3. M. Gopal, *Digital Control and State Variable Methods*, 2nd Edition, Tata McGraw-Hill, 2003.

1. <https://nptel.ac.in/courses/108/105/108105088/>: by Prof. S. Mukhopadhyay, IIT Kharagpur
2. <https://nptel.ac.in/courses/108/105/108105062/>: by Prof. S. Sen and Prof. S. Mukhopadhyay, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the process, characteristics, types of controllers, and PID controller tuning.
CO2	Identify the type of final control elements and explain its working principles.
CO3	Examine & troubleshoot the various controller structures and their configurations.
CO4	Apply the knowledge of PLC and DCS for automating industrial processes in real world.
CO5	Utilize the concepts of real-time programming to design industrial automation systems.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO5	2	1	1										1		

Type	Code	Communication Systems Engineering	L-T-P	Credits	Marks
PC	18EC1T13		3-0-0	3	100

Objectives	The objective of this course is to study electronic communication systems, modulation techniques, digital transmission of analog signals, random variables, and sources & filtering of noise.
Pre-Requisites	Knowledge of signals & systems and probability theory is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required; sessions are planned to be interactive with focus on problem solving activities.

Evaluation Scheme

Teacher's Assessment			Written Assessment		Total
Quiz	Surprise Test(s)	Assignment(s)	Mid-Term	End-Term	
05	05	05	25	60	100

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Signals and Spectra: An Overview of Electronic Communication Systems, Types of Signal, Fourier Series, Fourier Transform, Properties of Fourier Transform, Orthogonal Signal.	8 Hours
Module-2	Amplitude Modulation Systems: Need for frequency translation, Double Side Band with Carrier (DSB-C), Double Side Band with Suppressed Carrier (DSB-SC), Modulators - Square-law, Switching, Balanced; Detectors: Square-law, Envelope, Synchronous; Single Side Band with Suppressed Carrier (SSB-SC), Frequency & Phase discrimination methods, Coherent detection, Modulation & demodulation of Vestigial Side Band modulation (VSB), Frequency Division Multiplexing, Radio Transmitter & Receiver (super heterodyne receiver).	9 Hours
Module-3	Angle Modulation: Angle Modulation, Narrow band FM, Wide band FM; FM Modulators: Direct method (Varactor diode method), Indirect method (Armstrong method), Simple slope detector, Balanced slope detector, Phase Locked Loop (PLL). Analog Pulse Modulation: Analog to Digital - The need, Sampling Theorem, Natural and Flat-top sampling, Quantization of signals, Quantization error, Pulse Amplitude Modulation, Pulse Width Modulation and Pulse Position Modulation.	9 Hours
Module-4	Digital Pulse Modulation: The PCM system, Bandwidth of PCM system, Delta Modulation (DM), Limitation of DM, Adaptive Delta Modulation, Differential PCM (DPCM), Comparison between PCM, DM, and DPCM. Digital Transmission of Analog Signal: Digital representation of analog signal, Line codes, Companding, Concept of Time Division Multiplexing, Multiplexing of PCM signals.	8 Hours
Module-5	Random Variables and Processes: Probability, Random variables, Useful probability density functions, Useful properties and certain application issues. Mathematical Representation of Noise: Sources of noise, Frequency-domain representation of noise, Superposition of noises, Linear filtering of noise, Noise bandwidth.	8 Hours
Total		42 Hours

Text Books:

- T1. H. Taub, D. L. Schilling, and G. Saha, *Principles of Communication System*, 4th Edition, Tata McGraw Hill, 2013.
- T2. R. P. Singh and S. D. Sapre, *Communication Systems : Analog and Digital*, 3rd Edition, McGraw Hill Education, 2012.

2. <https://nptel.ac.in/courses/108/104/108104091/>: by Prof. A. Jagannathan, IIT Kanpur
3. <https://nptel.ac.in/courses/117/105/117105144/>: by Prof. S. S. Das, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain different types of signals and their characteristics using Fourier analysis tools.
CO2	Describe the fundamentals of amplitude modulation and demodulation techniques.
CO3	Articulate performance of angle modulation techniques and various analog pulse modulation schemes.
CO4	Explain different types of digital pulse modulation schemes and digital transmission of analog signals.
CO5	Visualize the behavior of random variables, noise signal in frequency domain, and linear filtering of noise.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Programmable Logic Controller (PLC): Definition, Historical background, Parts of a PLC, Principles of operation, PLCs vs. other types of controllers, PLC size & application, Advantages of PLCs; Developing Fundamental PLC Wiring Diagrams and Ladder Logic Programs: Electromagnetic control relays, Contactors, Motor starters, Manually & Mechanically operated switches, Sensors, Output control devices, Seal-in circuits, Electrical interlocking circuits, Converting relay schematics into PLC ladder programs, Ladder Logic Program from a narrative description.	8 Hours
Module-2	PLC Programming: Introduction, Types of PLC languages, Ladder diagram format, Ladder relay instructions, Ladder relay programming, Timers and counters, Program/Flow control instructions, Arithmetic instructions, Data manipulation, Data transfer instructions & special function instructions, Network communication instructions; PLC Installation Practices, Editing, and Troubleshooting: PLC enclosures, Electrical noise, Leaky inputs and outputs, Grounding, Voltage variations & surges, Program editing and commissioning, Programming & monitoring, Preventive maintenance, Troubleshooting, PLC programming software.	9 Hours
Module-3	Introduction to SCADA: Data acquisition systems, Evolution of SCADA, Communication technologies, Monitoring and supervisory functions, SCADA applications in utility automation, Industries; SCADA System Components: Schemes - Remote terminal unit, Intelligent electronic devices, Programmable Logic Controller, Communication Network, SCADA Server, SCADA/HMI Systems; SCADA Applications: Utility applications - Transmission & distribution sector – operations, monitoring, analysis and improvement, Industries - oil, gas and water, Case studies, Implementation, Simulation exercises.	9 Hours
Module-4	Distributed Control Systems (DCS): Introduction, History of DCS, DCS concept, Communication in DCS, Modes of DCS, DCS hardware & software, DCS structure, Architectural feature of DCS, DCS design considerations, Advantages & disadvantages.	7 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	System Integration with PLC & Computer: Supervisory computer functions - Supervisory control and optimization, production monitoring and control, on-line information system; DCS and Supervisory Computer Displays: Display access method, Display features, Alarm access architecture, Voice input machine interface; Man Machine Interface: Sequencing, Supervisory control; Computer Interface with DCS Hardware: Gateway, Interface with PLC, Interface with direct I/O, Network linkages, Links between networks.	9 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Experiment with the wiring diagram of PLC with various sensors & output devices and execute different ladder programs.
CO2	Develop programs for PLC based processes and their maintenance as per requirement.
CO3	Effectively utilize SCADA systems in transmission & distribution sector.
CO4	Design and construct DCS with required hardware and software for industrial applications.
CO5	Integrate PLC, DCS, and SCADA systems to build automation systems for the industry.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

4. <https://ocw.mit.edu/courses/biological-engineering/>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the operating principles, design and applications of biomedical engineering.
CO2	Describe human physiological system with respect to design consideration of medical equipment.
CO3	Compare different medical recording and imaging systems and explain the limitations of pathological diagnosis.
CO4	Realize the risk factors of different medical instruments and electrical safety parameters.
CO5	Determine application of bio-sensors for biomedical signal processing in specific applications.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Basic Tools of Soft Computing: Evolution of Computing - Soft Computing constituents, Difference between soft computing and hard computing; Fuzzy logic, Neural Networks and Evolutionary Computing, Characteristics of Soft computing, Some applications of Soft computing techniques.	6 Hours
Module-2	Fuzzy Logic Systems: Basics of fuzzy logic theory, Crisp and fuzzy sets; Operations on Fuzzy Sets, Membership Functions, Fuzzy relations, Fuzzy rules, Propositions, Implications and inferences, Zadeh's compositional rule of inference, Methods of Defuzzification. Fuzzy Logic Controller: Fuzzy Inference System, Mamdani, Takagi and Sugeno architectures, Examples and applications of fuzzy logic controller.	12 Hours
Module-3	Artificial Neural Networks: Model of an artificial neuron, Neural network architectures, Single layer feedforward network, Multilayer feedforward network, Recurrent networks; Early neural network architectures - Rosenblatt's Perceptron, ADALINE network, MADALINE network, Examples & applications of neural networks.	7 Hours
Module-4	Training of ANN: Generalized delta rule, Hebbian rule; Back propagation algorithm, Effect of tuning parameters of the backpropagation algorithm; Radial Basis Function networks & Least Square training algorithm; Kohonen self-organizing map and learning vector quantization networks; Recurrent neural networks, Simulated annealing neural networks; Adaptive neuro-fuzzy inference systems (ANFIS).	10 Hours
Module-5	Evolutionary Computing: Biological evolution and its application to search techniques, Concept of Genetics, GA architectures, GA operators - Encoding, Crossover, Selection, Mutation, Solving of single-objective optimization problems using GAs; Introduction to other optimization techniques and hybrid evolutionary algorithms.	7 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Get an understanding of different soft computing techniques and their applicability.
CO2	Gain insight on fuzzy principles & inference and their implementation in designing fuzzy systems.
CO3	Apply different types of neural networks in electrical & electronics engineering problems.
CO4	Analyze effectiveness of neural networks for solving complex engineering problems.
CO5	Develop knowledge about evolutionary computation with focus on genetic algorithm.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Active Filters: Active Filters and their frequency response; First order and Second Order Low-pass/High Pass Butterworth filter: Filter Design, Frequency Scaling, Band-pass and Band-reject filters (wide & narrow), All-Pass filter; Oscillators: Principles, Types, Quadrature and Voltage Controlled Oscillator, Saw tooth wave generator; Comparators: Basic comparator, zero-crossing detector, Schmitt Trigger, comparator characteristics, limitations of Op-Amp as comparators, voltage limiters.	9 Hours
Module-2	Bistable (Fixed Bias and Self Bias) Multivibrator, Loading, commutating capacitors, Triggering the binary (symmetrical and unsymmetrical through unilateral device), Schmitt Trigger Circuit (Emitter-coupled Bi-stable MV), Monostable Multivibrator (collector coupled and emitter coupled), Gate Width and Waveforms, Triggering of the Monostable MV, Astable Multivibrator (collector coupled and emitter coupled).	9 Hours
Module-3	Wide-band Amplifiers: The Hybrid- π , High-frequency, Small signal Common-emitter Model, RC-Coupled Amplifier, Frequency Response of a Transistor Stage, Short-Circuit Current Gain, Current Gain with Resistive Load, Transistor Amplifier Response taking Source Impedance into Account, Transient Response of a Transistor Stage; Negative Resistance Switching Devices: Voltage Controllable Negative resistance devices, Tunnel Diode operation and characteristics, Monostable, Astable, Bistable operations using tunnel diode, Voltage controlled Negative Resistance Switching circuits.	8 Hours
Module-4	Voltage and Current Time Base Generators: Time-Base Generators, General features of a Time-base signal, Methods of generating a voltage time-base waveform, Exponential sweep circuit, Miller and bootstrap time base generators - Basic principles, Transistor miller time-base generator, Transistor bootstrap time-base generator, Current time-base generators, A simple current sweep, Linearity correction through adjustment of driving waveform, Transistor current time-base generator.	8 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Specialized IC Applications: IC 555 Timer as Monostable and Astable Multivibrator, applications; Phase Locked Loop: Operating principle of PLL, Phase detectors, Exclusive-OR phase detector, Monolithic phase detector, Instrumentation Amplifier and its applications.	8 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the concepts of active filters, oscillators, comparators and signal generators with their applications.
CO2	Describe & distinguish different multivibrators like astable, monostable and bistable multivibrators.
CO3	Design memory circuits, multivibrators, and microwave circuits using wide band amplifiers and negative resistance switching devices.
CO4	Design different types of voltage and current time-base generators for various engineering applications.
CO5	Use instrumentation amplifier in electronic communication circuits and realize specialized chip design for monostable and astable applications.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

P.T.O

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Use probability theory to comprehend design criteria and model adaptive systems.
CO2	Develop mathematical model of linear adaptive processors for performance & stability.
CO3	Use gradient search algorithm for gradient estimation for adaptive systems.
CO4	Apply LMS algorithm for estimating the filter weight & performance analysis.
CO5	Apply various filtering techniques to a given problem and assess the solution & results.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the characteristics of instruments and uses of transducers in industry.
CO2	Identify the instruments for the analysis of chemical composition in industry.
CO3	Explain the principles & working of telemetry systems and their industrial applications.
CO4	Describe the various components of power plant instrumentation and its usage.
CO5	Realize hazards in industry and practice safety principles in instrumentation.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Image Fundamentals: Fundamental steps in digital image processing, Image sensing and acquisition, Image formation model. Image sampling and quantization, Spatial and intensity resolution, Image Interpolation, Relationship between pixels, Distance measure. Basic Intensity Transformation Functions: Image negative, Log transformation, Power-law transformations, Piecewise linear transformation functions, Contrast stretching, Intensity-level slicing, Bit-plane slicing, Histogram Processing, Histogram equalization.	8 Hours
Module-2	Spatial & Frequency Domain Filters: Mechanics of spatial filtering, Spatial correlation and convolution, Smoothing spatial filters, Sharpening spatial filters, Unsharp masking and high-boost filtering, Filtering in frequency domain, Image smoothing and sharpening in frequency domain using ideal, Butterworth, Gaussian, and Homomorphic filters.	8 Hours
Module-3	Image Restoration: A model of image degradation / restoration process, Noise models, Restoration in the presence of noise, Order statistics filters, Adaptive filters, Linear position invariant degradations, Estimating the degradation function, inverse filtering, Wiener filter, Constrained least square filter. Color Image Processing: Color fundamentals, Color models, Color conversions, Pseudo-color processing, Basics of full color image processing.	8 Hours
Module-4	Image Segmentation: Point, line and edge detection, Edge linking and boundary detection, Global processing using Hough transform, Thresholding, Global, adaptive and region-based segmentation. Image Compression: Fundamentals, Redundancy, Entropy, Some basic compression methods, Huffman coding, Arithmetic coding, LZW coding, Block transform coding, Predictive coding, Lossy predictive coding, Still image compression standards – JPEG and JPEG-2000.	9 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Video Coding: Inter-frame redundancy, Motion estimation techniques – full search, fast search, Forward and backward motion prediction, Frames, Slices, Macro-blocks and blocks, Frame classification – I, P and B; Video sequence hierarchy – Group of pictures; Elements of a video encoder and decoder; Video coding standards – MPEG and H.26X. Video Segmentation: Temporal segmentation – Shot boundary detection, Hard and Soft-cuts; Motion-based spatial segmentation; Video object detection & tracking.	9 Hours
Total		42 Hours

4. <https://nptel.ac.in/courses/117/104/117104069/>: by Prof. S. Gupta, IIT Kanpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe fundamental concepts of image processing, its scope and applications.
CO2	Explain 2D convolution in spatial & frequency domain and their implications in developing various high-pass & low-pass filters.
CO3	Restore images using various schemes & adaptive filters and process color images.
CO4	Segment and compress images using various techniques as per application requirement.
CO5	Perform video coding and segmentation using various techniques & standards.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Cont'd...

PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Advanced Control Systems	L-T-P	Credits	Marks
PE	18EE2T07			3-0-0	3

Objectives	The objective of this course is to study the concepts of discrete-time & non-linear control systems, state-space analysis, design of compensators for control systems, and determine the performance using different measures.
Pre-Requisites	Basic knowledge on mathematics, digital signal processing and control system engineering is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required; sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Digital Control System: Sample and Hold, A/D and D/A conversion. Z-transform, Inverse Z-transform, Z-Transform method for solving difference equations, Impulse sampling & Data Hold, Sampling theorem, Folding, Aliasing, Pulse Transfer function, Mapping between s-plane and z-plane, Stability analysis of closed loop systems in the z-plane by use of Bilinear Transformation and Routh's stability criterion, Jury Stability.	10 Hours
Module-2	State Space Analysis: Concept of state and state variables, State model of linear systems, State Space representation using physical, phase, and canonical variables, Derivation of Transfer Function model from State Space Model; Diagonalization: Eigenvalues and Eigenvectors, Solution of State Equations, State Transition Matrix, Cayley-Hamilton Theorem, Controllability and Observability, Pole Placement by State Feedback, State Observer.	8 Hours
Module-3	Phase Plane Analysis: Common Physical Non Linearities - Saturation, Friction, Backlash, Relay and Multivariable Nonlinearity; Phase Plane Method: Basic Concepts, Singular Points, Nodal Point, Saddle Point, Focus Point, Vortex Point; Stability of Non Linear Systems: Limit Cycles, Construction of Phase Trajectories by Analytical Method and Graphical Methods.	10 Hours
Module-4	Describing Function Method: Basic Concepts, Derivation of Describing Functions; Stability Analysis by Describing Function Method: Stability Analysis by Gain-phase Plots, Jump Resonance, Introduction to Liapunov's Stability Criterion.	6 Hours
Module-5	Introduction to Design: Realization of compensators - Lag, Lead, and Lag-Lead compensator; Tuning of PID controller, Feedback compensation, Design of robust control system; Advances in control system: Introduction to optimal control, Performance measures like ISE, ITAE; Quadratic indices, Introduction to fuzzy control.	8 Hours
Total		42 Hours

5. <https://www.electrical4u.com/different-types-non-linearities-in-controlsystem>

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Implement Z-transform for solving difference equation in discrete time control system and check the system stability in Z-plane by various methods.
CO2	Articulate the concepts of state variables, state space representation in different forms and explain system controllability & observability.
CO3	Develop understanding of physical non-linearities and methods of stability analysis for non-linear systems.
CO4	Analyze the describing function and conduct stability analysis by various methods using advanced techniques.
CO5	Describe the design criteria of controller & compensator and perform stability analysis of the system.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Review of Circuits & Systems: Circuit elements and their constitutive relations; Network theory: Superposition (Linearity) and Time-Invariant principle; Design and analysis of LTI systems: KCL, KVL, Node Equation procedure, Thevenin and Norton method; Matrix formulation for CAD solution; Analysis of non-linear circuits: analytical, graphical and incremental solution; Dynamic Circuit Analysis: Solution to first-order differential equation.	4 Hours
Module-2	Integrated Circuit Devices: Diodes - Basic operation & Large-signal modeling; MOS Transistor: Large & small-signal (low & high frequency) modeling, Advanced MOS modeling (subthreshold, mobility degradation); Introduction to SPICE modeling: Diode Model, MOS Transistors, Advanced SPICE Models for MOS Transistors; Passive Devices: Resistors and capacitors; Reading process parameters from foundry documents.	9 Hours
Module-3	CMOS Processing & Layout: CMOS processing, Layout and design rules; Reading design rules from foundry documents; Analog layout considerations - variability, mismatch, matching, noise consideration. Single-Stage Amplifiers: Common-Source, Source Follower, Common-Gate, Examples, Impedance Matching.	10 Hours
Module-4	Op-Amp: Diff-Amp, Telescopic, Folded Cascode, Two-Stage Amplifier Design; Stability: Frequency Response, Feedback, Compensation. Current Mirrors: Simple current mirror, Cascode current mirror, Wide-swing current mirror, Matching.	10 Hours
Module-5	Bandgap References: Low Power Bandgap Reference Design. Low Noise Amplifier (LNA): Design of Low Noise Amplifier.	9 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the structure and operational analysis of devices like Diode, MOSFET and their large and small-signal models, design flow and fabrication steps.
CO2	Describe the CMOS process and layout design for Analog Integrated Circuits.
CO3	Design single-stage amplifiers for various applications.
CO4	Design Op-Amps and current mirrors of different topologies for various applications.
CO5	Analyze and design bandgap reference and low noise amplifiers.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Cont'd...

PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Architecture: Principles and architecture of satellite communication, Brief history, advantages, disadvantages, applications, and frequency bands used for satellite communication. Orbital Analysis: Orbital equations, Kepler's laws of planetary motion, Apogee and Perigee for an elliptical orbit, evaluation of velocity, orbital period, angular velocity etc., of a satellite, Locating satellites with respect to earth, Look angles determination.	9 Hours
Module-2	Satellite Sub-systems: Architecture and roles of various sub-systems of a satellite system such as telemetry, tracking, command, and monitoring (TTC & M), Altitude and orbit control system (AOCS), Communication sub-system, Power sub-systems, Antenna sub-system, Equipment reliability, and space qualifications.	8 Hours
Module-3	Typical Phenomena in Satellite Communication: Solar Eclipse on satellite, its effects, remedies for Eclipse, Sun Transit Outage phenomena, its effects and remedies, Doppler frequency shift phenomena and expression for Doppler shift, Range variations and remedies, orbital perturbations.	8 Hours
Module-4	Satellite Link Budget: Flux density and received signal power equations, Calculation of System noise temperature for satellite receiver, noise power calculation, Drafting of satellite link budget and C/N ratio calculations in clear air and rainy conditions, Case study of Personal Communication system (satellite telephony) using LEO.	9 Hours
Module-5	Modulation and Multiple Accessing Techniques: Analog FM transmission by satellite, Digital transmission, TDM, FDMA, TDMA, CDMA, Typical case studies of VSAT, DBS-TV satellites, GPS.	8 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the fundamentals and orbital mechanics of satellite communication systems.
CO2	Explain different satellite subsystems for effective communication.
CO3	Analyze and solve problems related to orbital effects of satellites.
CO4	Optimize practical satellite links considering various atmospheric propagation effects.
CO5	Analyze and optimize different modulation and MAC techniques in case studies.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the fundamentals of mobile communication networks and various protocols.
CO2	Analyze radio propagation, fading, attenuation, channel modeling and other path losses.
CO3	Explain & compare various wireless application protocols & mobile IP implementations.
CO4	Use internet from remote location for multiple access signal structuring.
CO5	Multiplex higher layer protocols and design wi-fi infrastructure.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. <https://www.youtube.com/watch?v=VeSxcfdLp9I/>: by R. Karamsetty, IoT Group, Intel

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the principles and concepts of smart manufacturing in modern industrial world.
CO2	Utilize Industrial Internet of Things to build smart industries.
CO3	Select and justify appropriate architecture for IIoT implementations.
CO4	Establish appropriate & efficient communication between IIoT enabled systems.
CO5	Explore the latest technological developments in IIoT applications for industry 4.0.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction: Conventional & non-conventional energy sources, their impact, availability, variability, Indian and world scenario; Solar, Wind, Biomass, Wave, Tidal, Geothermal energy systems; Solar Energy: Solar processes, Composition of solar radiation; Extra-terrestrial & terrestrial radiation, Angles - Azimuth, Zenith, Hour; Irradiance, Solar constant; Solar Thermal Systems & Applications: Solar collectors, Types & performance characteristics, Water heating systems (active & passive), Space heating & cooling systems, Desalination systems, Solar cooker, Solar thermal power plant.	8 Hours
Module-2	Solar Photovoltaic System: Operating principle, Photovoltaic cell concepts, Cell, Module, Array, Losses in solar cell, Effects of partial & complete shadowing, Series and parallel connections, Cell mismatching, PV voltage-current characteristics, Equivalent circuit, Maximum power point tracking; Applications: battery charging, Pumping, Lighting, Peltier cooling.	10 Hours
Module-3	Biomass Power: Principles of biomass conversion, Combustion and fermentation, Anaerobic digestion, Types of biogas digester, Wood gasifier, Pyrolysis, Applications, Biogas, Wood stoves, Bio diesel, Combustion engine, Urban waste to energy conversion, Biomass based power generation.	9 Hours
Module-4	Wind Energy: Wind energy, Variability, Conversion principle; Wind power density, Efficiency limit, Types of converters, Aerodynamics of rotors, Power~Speed and Torque~Speed characteristics, Wind turbine control systems; Conversion to Electrical Power: Induction and synchronous generators, Grid connected & self excited induction generator operation, Constant voltage & constant frequency generation with power electronic control, Single & double output systems, Reactive power compensation, Characteristics of wind power plant, Concepts of DFIG.	10 Hours

Cont'd...

Module-#	Topics	Hours
Module-5	Energy Storage Systems: Batteries, Ultra capacitors, SMES; Fuel Cell: Fuel Cell Basics, History of fuel cell technology, Open circuit voltage, Nernst equation analysis, Causes for voltage loss, Types of fuel cell and their efficiency, Applications; Introduction to Hybrid Energy Systems: PV-Wind, PV-Fuel Cell, PV-Diesel.	5 Hours
Total		42 Hours

2. <https://nptel.ac.in/courses/108/105/108105058/>: by Prof. S. Banerjee, IIT Kharagpur
3. <https://nptel.ac.in/courses/121/106/121106014/>: by Dr. P. Haridoss, IIT Madras

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Generalize solar thermal systems and identify various alternate energy sources & their characteristics.
CO2	Analyse and design a solar photovoltaic system for specified applications.
CO3	Evaluate the effectiveness of biomass energy conversion in waste management.
CO4	Design wind energy systems and analyze their operational characteristics.
CO5	Investigate the operation of fuel cell and configuration of different hybrid energy systems.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

Cont'd...

PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Mapping of COs to POs and PSOs (1: Low, 2: Medium, 3: High)

Type	Code	Stochastic Processes	L-T-P	Credits	Marks
OE	18BS3T12		3-0-0	3	100

Objectives	The objectives of this course is to gain mathematical maturity by equipping the students to handle computing probability in different conditions and studying the concepts of Markov chain & Queuing theory.
Pre-Requisites	Knowledge of Sets, Probability, and Linear Algebra is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Review of basics of Probability - Probability of an event, Conditional probability, Independent event and Bayes' formula, Random variables, Discrete and Continuous, Distribution functions, Joint distribution & independent random variables, Expectation, Variance and covariance, Variance of a sum, Conditional distribution & conditional expectation (discrete case), Conditional distribution & conditional expectation (continuous case), Computing expectation & variance by conditioning, Computing probabilities by conditioning.	8 Hours
Module-2	Stochastic Processes, Markov Chain - Introduction and definition, Chapman-Kolmogorov equations, Classification of states, Limiting probabilities, Some application problems, Mean time spent in transient state, Branching processes, Time reversible Markov chains.	11 Hours
Module-3	Markov decision process, Hidden Markov chain, Exponential distribution and its properties, Counting process & definition of Poisson process, Inter arrival & waiting time distribution, Further properties of Poisson process, Non-homogeneous Poisson process.	8 Hours
Module-4	Continuous-time Markov chain, Birth & death process, The transition probability function, Limiting probabilities, Time reversibility, Computing the transition probabilities.	7 Hours
Module-5	Terms & notations in Queuing Theory, Steady state probabilities, A single server exponential queuing system (M/M/1), M/M/1 system with finite capacity, An application problem, The system M/G/1, Multiserver queues.	8 Hours
Total		42 Hours

4. <https://nptel.ac.in/courses/111/102/111102098/>: by Dr. S. Dharmaraja, IIT Delhi

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply probability models to real life engineering problems.
CO2	Explain Markov chain and classification of states.
CO3	Solve problems using the concepts of hidden Markov chain and Poisson process.
CO4	Apply Markov chain in problems of different field of engineering.
CO5	Apply Queuing theory in engineering and daily life situations.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Project Systems Management: a life cycle approach, project characteristics; Project life cycle phases - conception, definition, planning and organizing, implementation, clean up; Project feasibility analysis - market, technical, financial; The project manager: roles & responsibilities, team building and conflict management; Tools and techniques for project management; Environmental impact analysis of a project.	9 Hours
Module-2	Commonly used techniques for Project Management, Network techniques - PERT, CPM and GERT; Project appraisal criteria - NPV, IRR; Pay back period, sensitivity analysis; Line of Balance (LOB), Accounting for risk, uncertainty and fuzziness. Time cost trade-offs and crashing procedures; Multi project planning & scheduling with limited resources; Multi objective, fuzzy and stochastic based formulations in a project environment.	9 Hours
Module-3	Project Resource Management: Allocation, Leveling and Smoothing methods; Multi project and multi resource, multi-mode scheduling under various constraints - limited resources, limited budget, non-split, start/end lag; Application of Heuristics.	8 Hours
Module-4	Cost Benefit Analysis: Cost benefit analysis – projects procurement process, life cycle costing, project cost reduction methods, project stores; Project Cost: Dynamics of project cost, Estimation of capital cost, Estimating operating costs, Forecasting income, Financial sources, Role of development financial institutions; Social cost benefit analysis.	8 Hours
Module-5	Planning, Monitoring and Control: Design of monitoring system, Computerized PMIS (Project Management Information System); Funds planning, performance budgeting and control; Project materials management; Pricing, estimating, and Contract Administration & Management, Building & Bid evaluation and analysis.	8 Hours
Total		42 Hours

Text Books:

T1. R. Paneerselvam and P. Senthilkumar, *Project Management*, 1st Edition, PHI Learning, 2009.

2. <https://nptel.ac.in/courses/110/107/110107081/>: by Prof. S. K. Gupta & Prof. M. K. Barua, IIT Roorkee

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the fundamental project management tools and behavioral skills.
CO2	Explain the basic concept of various network techniques for project management.
CO3	Optimally utilize the resources for successful completion of a project.
CO4	Preform cost-benefit analysis of a project considering various factors involved.
CO5	Plan, monitor, control, and administer projects using computerized PMIS tools.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

4. <https://nptel.ac.in/courses/108/102/108102096/>: by Prof. S. Prasad, IIT Delhi

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the basic principles of digital data transmission.
CO2	Explain & analyze different digital modulation techniques.
CO3	Analyze & solve problems related to different multiple access techniques.
CO4	Explain the fundamentals & standards of cellular communication systems.
CO5	Describe the principles of communication through a fiber optic medium.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction: Speech production and modeling, Human auditory system; General structure of speech coders; Classification of speech coding techniques – parametric, waveform and hybrid; Requirements of speech codecs – quality, coding delays, robustness.	8 Hours
Module-2	Speech Signal Processing: Pitch-period estimation, All-pole and All-zero filters, convolution; Power spectral density, Periodogram, Autoregressive model, Autocorrelation estimation.	8 Hours
Module-3	Linear Prediction of Speech: Basic concepts of Linear Prediction, Linear Prediction Analysis of non-stationary signals – prediction gain, examples; Levinson-Durbin algorithm, Long term and short-term linear prediction models, Moving average prediction; Speech Quantization: Scalar quantization – uniform quantizer, optimum quantizer, logarithmic quantizer, adaptive quantizer, differential quantizers; Vector quantization – distortion measures, codebook design, codebook types.	9 Hours
Module-4	Scalar Quantization of LPC: Spectral distortion measures, Quantization based on reflection coefficient and log area ratio, bit allocation; Linear Prediction Coding - LPC model of speech production, Structures of LPC encoders and decoders, Voicing detection, Limitations of the LPC model.	9 Hours
Module-5	Code Excited Linear Prediction: CELP speech production model, Analysis-by-synthesis, Generic CELP encoders and decoders, Excitation codebook search – state-save method, CELP based on adaptive codebook, Adaptive codebook search, Low delay CELP and algebraic CELP.	8 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain different speech production systems, coding techniques, and codecs.
CO2	Describe pitch and power of speech signals and processing of the same.
CO3	Visualize linear prediction methods and different types of quantizers for speech signals.
CO4	Describe the LPC model and the structure of encoders & decoders.
CO5	Analyze and synthesize CELP speech production model.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the basics of Internet Technology and the structure of the world wide web.
CO2	Design professional web pages using HTML and CSS.
CO3	Create interactive web pages using Java script and XML.
CO4	Use server side programming to create dynamic web applications.
CO5	Explore & make use of web services and investigate security issues in Internet.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Introduction to Machine Learning	L-T-P	Credits	Marks
OE	18CS3T16		3-0-0	3	100

Objectives	The objective of this course is to study various supervised, unsupervised, and reinforcement learning techniques & algorithms to discover patterns in data and make predictions based on the patterns for solving business problems.
Pre-Requisites	Knowledge of engineering mathematics is required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on problem solving activities.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Overview of supervised learning, K-nearest neighbour, Multiple linear regression, Shrinkage methods (Ridge regression, Lasso regression), Subset selection, Linear Discriminant Analysis, Logistic regression.	9 Hours
Module-2	Bias, Variance, and model complexity, Cross-validation, Bootstrap methods, Regression and classification trees, Boosting methods, AdaBoost and Random forest.	8 Hours
Module-3	Generative model for discrete data (Bayesian concept learning, Naïve Bayes classifier), SVM for classification, Reproducing Kernels, SVM for regression.	8 Hours
Module-4	Clustering (K-means, spectral clustering), Feature Extraction (Principal Component Analysis (PCA), kernel based PCA, Independent Component Analysis (ICA), Non-negative matrix factorization).	9 Hours
Module-5	Introduction to Reinforcement learning, Single State Case: K-Armed Bandit, Elements of Reinforcement Learning, Model-Based Learning (Value Iteration, Policy Iteration).	8 Hours
Total		42 Hours

2. <https://nptel.ac.in/courses/106/105/106105152/>: by Prof. S. Sarkar, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Apply supervised machine learning models to solve related real life problems.
CO2	Analyze and select the best suitable supervised models among many.
CO3	Apply classification and regression models such as SVM and decision tree based models.
CO4	Extract important features from the given data set and apply clustering techniques.
CO5	Apply reinforcement learning models to solve related real life problems.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Sources of Energy: Conventional & non-conventional sources of energy, Fossil fuels, Nuclear fuels, hydel, solar, wind and bio fuels in India, Energy conservation, Nuclear energy through fission and fusion processes.	8 Hours
Module-2	Energy Conversion: Energy conversion routes, Direct and indirect ways of energy conversion, Basic conversion techniques for Solar, Nuclear, Geothermal, Tide and Wind Energies.	8 Hours
Module-3	Energy & Environment: Energy efficiency & conservation, Clean energy technologies, Importance in sustainable development, Greenhouse effect, Carbon footprint, Energy consumption & sustainability, Economics of energy, Economics of production versus consumption, Linkages between economic & environmental outcomes, Influence of economic, environmental, trade, and research policies on future energy.	8 Hours
Module-4	Global & Indian Energy Scenario: Role of energy in economic development & social transformation, Overall energy demand, Availability & consumption, Depletion of energy resources & its impact on economy, Nonproliferation of nuclear energy; International energy policies of G-8, G-20, OPEC and European union countries, Kyoto protocol, Paris convention & other initiatives; Indian Energy Scenario: Commercial & non-commercial forms of energy, Utilization pattern in the past & present, Future prediction, Sector-wise energy consumption, Indian Energy Policy & regulation, Energy policy issues at global level, National level and state level, Energy Conservation Act 2001, Restructuring of Indian power sector & Electricity Act 2003, Energy pricing & its impact on global variations, National solar mission.	10 Hours
Module-5	Energy Conservation: Fundamentals of energy conservation, Energy management in power plant, Energy conservation in buildings, Heating, Ventilation, Evaluation of heat loss, Heat gain in building systems & air-conditioning system, Degree day in energy use monitoring, Energy conservation opportunities in chemical industries, Waste heat recovery, Co-generation, Energy conservation in agricultural sector, Energy conservation in illumination engineering.	8 Hours
Total		42 Hours

Online Resources:

1. https://en.wikipedia.org/wiki/Kyoto_Protocol
2. https://en.wikipedia.org/wiki/Paris_Agreement

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Identify various alternate energy sources and their characteristics.
CO2	Analyze different energy conversion techniques for renewable energy systems.
CO3	Evaluate the effect of energy consumption on environment, economy and development.
CO4	Visualize global & national energy scenario and international energy policies.
CO5	Investigate different energy conservation techniques and energy management systems.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

3. <https://nptel.ac.in/courses/112/106/112106134/>: by Prof. G. Srinivasan, IIT Madras

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Understand the queue and inventory model and solve related problems.
CO2	Create discrete random variable.
CO3	Generate continuous random variable and simulate queues and inventory models.
CO4	Understand and apply the variance reduction methods in simulation.
CO5	Test the goodness of a simulation by analyzing the simulated data.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

3. <https://nptel.ac.in/courses/110/107/110107094/>: by Prof. V. Sharma & Prof. R. Agrawal, IIT Roorkee

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe the importance of entrepreneurship as a tool for development and discern distinct entrepreneurial traits.
CO2	Analyse the business environment to identify business opportunities and understand the systematic process to select and screen a business idea.
CO3	Prepare a proper business plan and project report.
CO4	Apply the tools necessary to create sustainable and viable businesses.
CO5	File and obtain patents for their innovative ideas to protect the rights of their business.

Program Outcomes Relevant to the Course:

PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

2. <https://nptel.ac.in/courses/117/101/117101002/>: by Prof. R. K. Shevgaonkar, IIT Bombay
3. <https://nptel.ac.in/courses/117104127/>: by Dr. P. Kumar, IIT Kanpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe fundamentals of fiber optics, its structure, types and wave propagation through fiber.
CO2	Estimate the losses and analyze the propagation characteristics of an optical signal in different types of fibers.
CO3	Describe and compare the basic principles and characteristics of different types of optical sources and detectors.
CO4	Analyze the performance of different types of optical modulators and amplifiers.
CO5	Summarize the applications of different WDM components, optoelectronic switching circuits and optical networks.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Cont'd...

PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Robotics & Robot Applications	L-T-P	Credits	Marks
OE	18EC3T22			3-0-0	3

Objectives	The objective of this course is to learn the fundamental concepts of robotics, such as manipulators, kinematics, trajectory planning, control techniques, sensors etc., and basic robot programming for various industrial applications.
Pre-Requisites	Basics of Engineering Mathematics, Digital Electronics, Microprocessors & Microcontrollers, Automation & Control etc., are required.
Teaching Scheme	Regular classroom lectures with use of ICT as and when required, sessions are planned to be interactive with focus on programming & applications.

Evaluation Scheme

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Robot Fundamentals: History of robotics, Basic concepts, Robot Anatomy, Robot Specification and work volume, Type of robot drives, Basic robot motions, Robot Manipulators, Kinematics, Precision movement.	9 Hours
Module-2	End Effectors: Introduction, Classification, Mechanical, Magnetic, Vacuum and Adhesive gripper, Gripper force analysis & design, Problem on gripper design and force calculation, Robot control - Unit control system concept, Servo & non-servo control of robot joints, Adaptive and optimal control.	8 Hours
Module-3	Sensors: Sensor devices, Types of sensors - contact, position and displacement sensors, force and torque sensors, Proximity and range sensors, Acoustic sensors, Robot vision systems - sensing and digitizing, Image processing and analysis.	8 Hours
Module-4	Robot Programming: Robot language, Classification, Programming methods, Lead through method, Teach pendent method, VAL systems and language, Simple program, Welding robot program, Program on loading/unloading.	9 Hours
Module-5	Industrial Applications: Application of robots, Material handling, Machine loading and unloading, Assembly robot, Inspection, Mobile robot, Microbots, Recent developments in robotics, safety considerations.	8 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Describe robot fundamentals, drives, Manipulators, movements and kinematics.
CO2	Explain various classes of end effectors and robot control techniques.
CO3	Describe the working of sensors and vision systems and analyze the sensed data.
CO4	Write programs to make the parts of a robot function as per the needs.
CO5	Design & develop robots for various industrial applications in the real world.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Introduction to Big Data, Data Management for Big Data, Data Exploration and Reproducibility, Data Quality; Introduction to Map Reduce, Map Reduce algorithm, patterns & relations, Parallel databases vs. Map Reduce, Storage solutions.	7 Hours
Module-2	Big Data Algorithms-I: Nearest Neighbor Search, Shingling of Documents, Similarity Preserving Summaries of Sets, Locality Sensitive Hashing for Documents, Distance Measures, Theory of Locality Sensitive Functions, LSH Families for High Degree of Similarities.	9 Hours
Module-3	Big Data Algorithms-II: Streaming Data Models, Sampling Data in a Stream, Filtering Streams, Counting Distinct Elements in a Stream, Estimating Moments, Counting Ones in Window, Page Rank, Efficient Computation of Page Rank, Topic Sensitive Page Rank.	9 Hours
Module-4	Big Data Algorithms-III: Clustering Techniques - BFR Algorithm, CURE Algorithm, Clustering in Non-Euclidean Space, Clustering for Streams and Parallelism; Matrix Factorization, Recommendation Systems and Collaborative Filtering.	9 Hours
Module-5	Introductions to Spark, Hadoop, Hive, Pig-Latin, Large Scale Visualization.	8 Hours
Total		42 Hours

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explain the concepts of Big Data and Map Reduce techniques.
CO2	Apply different tools and techniques used for finding similar items.
CO3	Demonstrate application of algorithms for analysis of streaming data and link analysis.
CO4	Apply different techniques for recommendation systems & collaborative filtering and compare different clustering techniques to apply them for large dataset.
CO5	Explore the concepts of Hadoop, MapReduce, Spark and apply them to implement big data algorithms.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Detailed Syllabus

Module-#	Topics	Hours
Module-1	Artificial Intelligence: Introduction; Intelligent Agents: Agents and Environment, Good Behavior, Nature of Environments, Structure of Agents; Problem Solving: Solving Problems by Searching - Problem-Solving Agents, Example Problems, Searching for Solutions, Uninformed search strategies, Searching with Partial Information.	8 Hours
Module-2	Informed Search & Exploration: Informed (Heuristic) search strategies, Heuristic functions, Local Search Algorithms & Optimization Problems; Constraint Satisfaction Problems: Introduction, Backtracking search for CSPs, Local Search for CSPs; Adversarial Search: Games, Optimal Decisions in Games, Alpha-Beta Pruning; Knowledge & Reasoning: Knowledge-Based Agents, The Wumpus World.	10 Hours
Module-3	Knowledge and Reasoning: Logic, Propositional Logic, Reasoning Patterns in Propositional Logic; First-Order Logic: Syntax and Semantics of First-Order Logic, Using First-Order Logic, Knowledge Engineering in First-Order Logic; Inference in First-Order Logic: Propositional vs. First-Order Logic, Unification and Lifting, Forward Chaining, Backward Chaining, Resolution; Knowledge Representation: Ontological Engineering , Categories and Objects, Semantic Nets, Frames.	8 Hours
Module-4	Planning: The Planning Problem, Planning with State-Space Search, Partial-Order Planning, Planning Graphs; Uncertain Knowledge & Reasoning: Acting under Uncertainty, Bayes Rule and its use; Probabilistic Reasoning: Representing Knowledge in an Uncertain Domain, Semantics of Bayesian Networks.	8 Hours
Module-5	Learning: Learning from Observations, Forms of Learning, Inductive Learning, Learning Decision Trees; Statistical Learning, Instance Based Learning, Neural Networks; Reinforcement Learning: Passive and Active Reinforcement Learning; Expert Systems: Introduction, Architecture, Representations.	8 Hours
Total		42 Hours

5. <https://nptel.ac.in/courses/106/105/106105079/>: by Prof. P. Dasgupta, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Explore agents, environments, and search goal state using uninformed techniques in a state space.
CO2	Apply search techniques for game playing and solving constraint satisfaction problems.
CO3	Interpret logic, inference rules for decision making, and represent knowledge using semantic nets & frames.
CO4	Apply planning and reasoning to handle uncertainty in real life problems.
CO5	Use learning to solve complex real-life problems and design expert systems.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Cont'd...

PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Type	Code	Industrial Automation & Control Lab	L-T-P	Credits	Marks
PC	18EI1L05		0-0-2	1	100

Objectives	The objective of this laboratory course is to get hands on exposure on applications of sensors, controller & final control elements for testing, calibration of measuring instruments, and various measuring techniques used in automation industry.
Pre-Requisites	Knowledge of sensors & transducers, control systems, instrumentation devices & systems is required.
Teaching Scheme	Regular laboratory experiments conducted under supervision of the teacher. Demonstration along with associated safety measures will be explained.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	Performance analysis on ON-OFF/P/PI/PD/PID controllers of 1st and 2nd order processes.
2	Design of Feedback, Feed-forward and Cascade controller by MATLAB or SIMULINK.
3	PID Control Tuning by PRC, Ziegler-Nichols and Cohen-Coon techniques.
4	Measurement and study of the characteristics of P/I & I/P converter.
5	Experiments on air velocity sensor and its associated signal conditioner circuit.
6	Determination of the different types of valve characteristics & gain at various conditions.
7	Measurement of displacement by IR motion sensor.
8	Experiment on flow measurement by using flow sensor.
9	Measurement of position control by DC motor drives.
10	Experiments and study the characteristics of level control system.
11	Experiments and study the characteristics of Pressure control system.
12	Experiments on Phase-Plane analysis of Relay Control system.
13	Implementation of ladder logic programming for controlling various sequential processes.

2. <https://nptel.ac.in/courses/103106148/>: by Prof. R. Rangaswamy, IIT Madras

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Design & analyze of various processes and their time-response performance.
CO2	Investigate & design various controller structures and their configurations.
CO3	Design PID controller tuning methods and investigate the effect on industrial processes.
CO4	Analyze the performance of the associated measuring elements used in process industry.
CO5	Design, program, and implement PLC for various industrial automation systems.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Type	Code	Communication Systems Engineering Lab	L-T-P	Credits	Marks
PC	18EC1L13		0-0-2	1	100

Objectives	The objective of this laboratory course is to get practical exposure to communication engineering by conducting experiments on spectrum analysis, FDM, TDM, PAM, PCM, FM & AM techniques using hardware & software.
Pre-Requisites	Basic knowledge of signals & systems, AM & FM modulation is required. Acquaintance with MATLAB and LabVIEW would be beneficial.
Teaching Scheme	Regular laboratory experiments conducted under supervision of the teacher. Demonstration will be given for each experiment in the pre-lab session.

Evaluation Scheme

Attendance	Daily Performance	Lab Record	Lab Test/ Mini Project	Viva-voce	Total
10	30	15	30	15	100

Detailed Syllabus

Experiment-#	Assignment/Experiment
1	To Plot and analyze the spectrum of following signals with aid of spectrum analyzer: Square wave, triangle wave and saw tooth wave.
2	Study and analyze various AM modulation and demodulation techniques.
3	Study of FM modulation and Demodulation Technique.
4	Study and Analyze the process of frequency division multiplexing and de-multiplexing.
5	Study and Analyze the Pulse Amplitude Modulation and de-modulation system.
6	Study and Analyze the Pulse code Modulation and de-modulation system.
7	Study and analysis of different AM techniques using MATLAB.
8	Study and analysis of FM technique using MATLAB.
9	Simulate AM modulation and demodulation system using LabView software.
10	Simulate FM modulation and demodulation system using LabView software.
11	To study and analyze Time Division Multiplexing.
12	Study the functioning of Delta modulator and Adaptive Delta Modulator.

3. <https://nptel.ac.in/courses/117/105/117105144/>: by Prof. S. S. Das, IIT Kharagpur

Course Outcomes: *At the end of this course, the students will be able to:*

CO1	Analyze frequency spectrum of different type of wave forms.
CO2	Realize different analog modulation schemes and their effect in communications with the help of spectrum analyzer.
CO3	Understand multiple signal transmission using FDM and TDM schemes.
CO4	Realize the PAM and PCM systems.
CO5	Explain the functioning of Delta modulator and Adaptive Delta Modulator.

Program Outcomes Relevant to the Course:

PO1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.
